The Architectural Inventory for the City of Pittsburgh, Allegheny County, Pennsylvania, was made possible with funding provided by the Pennsylvania State Historic Preservation Office (PA SHPO), the City of Pittsburgh, and the U.S. Department of the Interior National Park Service Certified Local Government program.

The contents and opinions contained in this document do not necessarily reflect the views or policies of the Department of the Interior. This program receives federal financial assistance for identification and protection of historic properties. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, as amended, the U.S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, disability, or age in its federally assisted programs. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to: Office of Equal Opportunity, National Park Service; 1849 C Street N.W.; Washington, D.C. 20240.

Abstract

This architectural inventory for the City of Pittsburgh (Planning Sector 6: Allentown and Knoxville Neighborhoods) is in partial fulfillment of Preserve Policy 1.2, to **Identify and Designate Additional Historic Structures, Districts, Sites, and Objects** (*City of Pittsburgh Cultural Heritage Plan, 2012*). This project is the eighth phase of a larger undertaking which aims ultimately to complete the architectural survey for all of Pittsburgh's Planning Sectors. The scope of this project provided for a complete inventory of Pittsburgh's Allentown Neighborhood and a partial inventory of Pittsburgh's Knoxville Neighborhood in Planning Sector 6.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register of Historic Places (NRHP) listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive-level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

All previously surveyed resources within Allentown and Knoxville were field checked and an updated survey record was prepared. In addition, project historians considered whether any areas could qualify as potential historic districts within Allentown, but ultimately concluded that no such areas exist in the neighborhood. In Knoxville, it is recommended that the area bounded by Bausman Street, Brownsville Road, St. John Vianney Cemetery, and Tarragonna Street be intensively surveyed, as this area has the potential to be eligible as a National Register of Historic Places (NRHP) District or as a City Historic District.

Project historians surveyed the following resources:

PREVIOUSLY SURVEYED

- 69 Previously Surveyed Extant Resources
- 7 Previously Surveyed Resources – Now Demolished and not replaced
- **76 TOTAL** Previously Surveyed Properties *Resurveyed*

NEWLY SURVEYED

- 2,055 **TOTAL** Newly Surveyed Resources

TOTAL SURVEYED

- 2,131 **TOTAL** Resources

ELIGIBILITY RECOMMENDATIONS

- 1 Previously Surveyed Resource listed in the NRHP.
 - 1 Previously Surveyed Resource – Previously Determined Individually Eligible for the NRHP
 - 2 Previously Surveyed Resources – Previously Determined Not Individually Eligible for the NRHP, but whose eligibility status is recommended to be re-evaluated.
 - 67 Resources without an individual NRHP eligibility determination – Recommended Potentially Individually Eligible for the NRHP
-
- **71 Eligible or Potentially Eligible Resources** Recommended for Intensive-Level Survey

One (1) resource, Knoxville Junior High School (Key No. 007614) is listed in the NRHP. The one (1) resource in the survey area previously determined individually eligible for the NRHP is the Carnegie Library of Pittsburgh Knoxville Branch (Key No. 201215). In addition, two (2) previously surveyed resources have been determined not eligible for the NRHP by the PA SHPO: the YMCA Hilltop Branch (Key No. 007620) and the Knoxville Public School No. 2 (Key No. 007617); it is recommended that both of these resources be re-evaluated for NRHP eligibility. This survey also identified 4 streets (or portions of streets) with brick or stone pavement as potentially eligible as part of a larger city-wide district comprising all streets with historic pavement as well as one sandstone retaining wall along Arlington Avenue that could contribute to a city-wide district comprising all masonry retaining walls.

This project was administered by the City of Pittsburgh with support from PA SHPO staff. Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards* (36CFR61) for history and/or architectural history. Consulting firms include Michael Baker International, Inc., Clio Consulting, and Cosmos Technologies, Inc.

This project was funded in part by a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant, the program guidelines of which can be found at http://www.portal.state.pa.us/portal/server.pt/community/grants/3794/certified_local_government_grant_program/417950.

Introduction

In 2013, the City of Pittsburgh received a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant for partial funding of an architectural inventory of Pittsburgh neighborhoods. The present survey (phase eight of the Pittsburgh Architectural Inventory) focuses on Planning Sector 6's Allentown and Knoxville neighborhoods. The survey was conducted in August 2019, and the report was compiled in September 2019. Previous phases of the survey include:

- Planning Sector 1 neighborhood of Troy Hill, October 2014.
- Planning Sector 1 Spring Garden and Spring Hill-City View neighborhoods, February 2015.
- Planning Sector 12 neighborhood of Larimer, September 2016.
- Planning Sector 5 neighborhood of Carrick, October 2016.
- Planning Sector 5 neighborhood of Brookline, September 2017.
- Planning Sector 4 West End and Elliott neighborhoods, September 2018.
- Planning Sector 2 neighborhood of Brighton Heights, May 2019.

The City of Pittsburgh is divided into 16 planning sectors. Each sector contains a number of neighborhoods and is delineated based on a number of factors, including neighborhood and ward boundaries and topographical features. The City chose to focus the eighth phase of its architectural inventory on the Mt. Washington and Hilltop West neighborhoods of Allentown and Knoxville to gain a comprehensive understanding of its development and extant historic-age resources because the area has not been previously studied in detail and it contains a high percentage of pre-1940 buildings. In addition, the neighborhoods have been subject to increasing vacancy and demolition in recent years. After 8 days of survey work, the three project historians surveyed 2,131 resources, of which 2,055 were newly surveyed and 76 were previously surveyed (Appendix B, Figures 1-2). This represents a complete survey of all parcels in the Allentown Neighborhood and a partial survey of the Knoxville Neighborhood. In Knoxville, all properties north of Bausman Street were surveyed. Properties were recorded using the PA SHPO minimum survey requirements (see Appendix A). Survey data were uploaded in real time to the City's Geographic Information Systems (GIS) database via tablet computers. These data were later re-formatted and transmitted to PA SHPO in a Microsoft Excel file in accordance with PA SHPO's Cultural Resources Geographic Information System (CRGIS) requirements.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register of Historic Places (NRHP) listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive-level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

Qualifications

Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards (36CFR61)* for history and/or architectural history. Project historians included Jesse Belfast and Justin Greenawalt, of Michael Baker International, Inc., and Angelique Bamberg of Clio Consulting. Project maps and data tables were compiled by Tahir Sondo of Cosmos Technologies, Inc.

Goals and Objectives

In 2012, the City of Pittsburgh Department of City Planning released its Cultural Heritage Plan as a component of its first comprehensive plan. Resulting from the plan, the need to document historic architectural resources was identified with the goal to:

Document the City’s cultural and historic resources in ways that are accurate, meaningful, comprehensive, and useful to the City and the general public.

The Cultural Heritage Plan noted that the Historic Resources Inventory should be a “dynamic, comprehensive list of the City’s historic resources.” Further, according to the plan, the existing inventory of historic resources (over 13,500 parcels identified as being historic on some level) “needs to be field checked and continually updated as physical conditions change and additional resources are listed in the National Register of Historic Places or designated under the City’s Historic Preservation Ordinance” (Cultural Heritage Plan, 112).

To realize these goals, the City prepared policies with corresponding action items in the historic preservation plan. This current field survey is in partial fulfillment of those items, including:

PRESERVE POLICY 1.2 - Identify and Designate Additional Historic Structures, Districts, Sites, and Objects

PRESERVE 1.2-A: Conduct a Citywide Reconnaissance Survey (cursory visual inspection).

Identify areas that are potentially eligible for new listings as City-Designated Historic Districts and NRHP Historic Districts. Focus on areas that:

- Have been previously identified as potentially eligible (see Cultural Heritage Plan Appendix B).
- Have a high percentage of structurally-sound and architecturally significant pre-1940 buildings.

Identify individual structures and sites outside of City-Designated and NRHP historic districts that are potentially eligible for individual nomination as a City-Designated historic resource and/or for listing in the NRHP. Focus on structurally-sound resources that:

- Would not otherwise be part of an eligible historic district.
- Are significant or unique for their architecture and/or engineering.
- Would severely and adversely impact the neighborhood's form, character, or economic growth potential if demolished or negatively altered. (Consider existing and former

schools, religious buildings, and civic or quasi-civic spaces such as libraries, parks, fire stations, community centers, etc.)

The current survey effort represents the City's second effort to identify previously unsurveyed historic resources within Sector 6's Allentown and Knoxville neighborhoods, in partial fulfillment of the above-mentioned goal. (The first effort occurred in 1992-93, when the Pittsburgh Register of Historic Places survey was conducted.) In addition, the City intends to use this project to further develop and refine the methodology for conducting architectural surveys that was used in the first through seventh phases of the Pittsburgh Architectural Inventory (October 2014/February 2015/September 2016/October 2016/September 2017/September 2018/May 2019).

Methodology

Background Research

Prior to initiating fieldwork, the project team conducted background research and reviewed published literature to identify and obtain sources of information regarding the history and architecture of Allentown and Knoxville. A review of existing Pittsburgh history texts helped to predict the types of properties that should be expected in the survey area; historic mapping illustrated patterns of development and periods of growth in the neighborhoods.

Reconnaissance Survey

The survey team consisted of three architectural historians who spent approximately eight days in the field with tablet computers. The tablets were pre-programmed with county property parcel maps and a fillable database of attribute fields developed by the project team to satisfy CRGIS database requirements (see Appendix A).

The survey consultants, in consultation with City and PHMC, determined that scattered properties should be surveyed which were of historic age (pre-1976) and retained enough integrity to be considered a “contributor” to a potential district (i.e. medium level of integrity or higher), in an effort to understand the overall character of a neighborhood. It was also decided that in areas which could potentially be eligible for listing in the National Register as districts, a building-by-building survey would still be necessary.

The project team conducted a windshield survey before beginning the building-by-building survey to develop priorities for data collection. Consultants determined to begin by surveying E. Warrington Avenue, then the rest of Allentown, then, working southward, as much of Knoxville as possible during the hours allotted for fieldwork. The survey team was able to conduct a complete building-by-building survey of Allentown and a partial survey of Knoxville during the field survey period. In Knoxville, all properties north of Bausman Street were surveyed. Previously identified resources throughout both neighborhoods were checked and updated in the course of this survey. There was not sufficient time in this phase to conduct a building-by-building survey of the other Planning Sector 6 neighborhoods of Duquesne Heights, Mount Washington, Beltzhoover, or Bon Air. Mt. Oliver Borough is also considered a Hilltop neighborhood by the non-profit Hilltop Alliance, but was not considered for this survey because it is not part of the City of Pittsburgh.

Consistent with previous surveys, the survey consultants decided to photograph all non-vacant parcels (i.e. those with buildings, structures, or landscape features such as parking lots or gardens), regardless of age or integrity, because it required minimal effort when the surveyor was entering information on integrity anyway; moreover, the photographs would enable project historians to review the integrity assessments after the fieldwork was completed in order to assure consistency among surveyors. Such additional photographic data provide an overall view of an area’s integrity and the nature of intrusions in a potential historic district. In the future, this photographic documentation will provide a complete

snapshot of a particular area and be a rich source of archival data to document change over time in Pittsburgh's neighborhoods.

If building parcels were post-1975 or vacant, then the surveyor could check the relevant box in the survey form indicating why the PHMC minimum requirements were not filled in for that resource.

Members of the survey team found it critical to establish consistency in the use of certain fields at the beginning of the survey. Use of the following fields is explained:

- **Potential Individual Eligibility:** Surveyors entered "Yes" for a select few properties discovered through background research to have been significant in the historical context of the community and for properties whose age or architecture stood out, suggesting that further research on their history was warranted. Previously surveyed resources were re-evaluated in the field and marked as "Yes" if their architecture, integrity, and/or historical associations warranted.
- **Potential District Eligibility:** Since potential historic districts were not defined prior to the survey, the entire Allentown and Knoxville neighborhoods were considered to be potential historic districts for the purposes of the survey. Working with a provisional Period of Significance of ca. 1870-1940 in mind, surveyors marked "yes" in this field for all resources of historic age with medium or high integrity. "No" was marked for resources built after 1940, those with low integrity, and most sites (such as parking lots and yards/gardens) unless they appeared to contain historic landscapes or other features. Analysis of potential district boundaries was done after the field survey was completed and integrity maps of the surveyed areas had been generated.
- **Integrity:** For this field, broad categories of "High," "Medium," and "Low" were utilized. Resources in the survey area were judged to have some integrity if, despite some alterations, their original character was discernible. A property which had artificial siding but all original trim, windows, and doors intact might be given a rating of "High." "Medium" was assigned to those which exhibited artificial siding and replacement windows and/or doors, but which retained their original size, scale, rhythm and proportion of openings, and possibly some original ornamentation. "Low" was used for properties with drastically altered facades, openings, massing, and/or materials, such that their original character had been obscured.
- **Style:** Correspondingly, where a resource's original style was evident in its massing, extant detail (such as cornice or window design), and/or characteristic feature (such as brackets or turned porch posts), that style was entered in this field. Resources with no remaining features of their original style were assigned a value of "No Style," even if context suggested a specific era of construction. "No Style" was also used for vernacular properties with no ornamentation or other stylistic gestures. "Mixed" was entered for transitional buildings which appeared to have had characteristics of more than one style when built. For buildings which exhibited an original style and a later

one associated with additions or alterations, these styles were entered separately in the “Style” and “Secondary Style” fields. “Other” was used primarily for mid-twentieth century resources that were not described by any of the standard PHMC style categories, such as Cape Cods, and split levels.

- Vacant parcels and properties constructed post-1975 were noted with a “Yes” in those fields. Additional fields and photographs were not recorded for vacant properties. For post-1975 buildings, sites, and structures, photographs were taken and the current function was recorded. Integrity was not rated for post-1975 resources. Parcels that were not occupied by a structure but that were in use (such as parking lots, parks, and gardens) were entered as “sites” and assigned a relevant function from the CRGIS-supplied drop-down list; such sites were also photographed.
- The “Historic Use” and “Current Use” fields allowed only one use to be selected. For mixed-use buildings, such as those with storefronts on their ground floors and apartments or offices above, the first-floor use was entered.
- “Year Built” dates were entered in the field and were derived from observation of materials, method of construction, style, and context. Historic maps, loaded onto surveyors’ tablets, were cross-referenced when possible. A secondary Year Built field enabled the survey to record the dates of additions or secondary structures. In a few cases, exact dates were known from research. For the rest, surveyors entered “C” for “circa” along with an estimated date.
- Several fields allowed surveyors to record addresses and other locational information that was different or missing from the pre-loaded county property information. The “Address Discrepancy” field was used to record street addresses that differed from the addresses in the county database. If errors were found in address fields, the “Full_address” field (which is the one listing the Allegheny County address) was not changed or corrected. Instead, secondary address fields for street name and number were populated after the survey was completed with address corrections that had been noted in the “address discrepancy” field. “Location” was used to record the address, parcel, or descriptive location of resources added by the survey team in the field, for example, structures such as billboards, bridges, and segments of streets which retained historic paving. A “Skip” field allowed surveyors to note that a data point was redundant with another already completed for a property. For example, in a condominium building, a county address point is present for each unit, but only one record usually needs to be completed for the building. In this case, surveyors would fill out one record for the whole property, note the range of addresses in the “Comments” field, then select “Yes” in the “Skip” field for each additional address. In order to make the survey results compatible with the City of Pittsburgh’s GIS database, which records property attributes according to Allegheny County tax parcel number, multiple entries were not used in the “PIN” or “Lot-and-Block” fields. Rather, in the case where a

property was composed of multiple tax parcels, the additional tax parcels were noted in the “Comments” and/or “Location” fields.

- Separate records were completed for individual addresses in attached rows of identical party-wall buildings, such as rowhouses. In the “Comments” field, the notation “Rel” was used to record the range of related addresses in the row. However, commercial buildings with more than one storefront were recorded as one resource and the full address range was entered in the “Address Discrepancy” field. After the survey was completed, the database was updated to include address ranges with low and high street numbers in secondary address fields. The survey data tables in Appendix C use these corrected address fields, including address ranges, rather than the Allegheny County address data, which use address ranges inconsistently.
- The “Comments” field was used by surveyors to record any additional features of note or unusual circumstances. Project historians also used the Comments field to note the condition of multiple buildings on a single parcel, i.e. “house + garage.”
- The “Number of Buildings” field was interpreted in the literal sense and only used to count resources that were buildings. For other resource types, such as structures, objects, and sites, “n/a” was entered in the “Number of Buildings” field.

Database Management

Once the reconnaissance survey was complete, the City GIS department uploaded the results from the platform software to Microsoft Excel. Spreadsheet data were reviewed for accuracy and completeness. PHMC Key Numbers and Inventory ID numbers were manually entered for all 2,131 surveyed resources. After the Excel File was complete, it was used to generate mapping (Appendix B) and tables (Appendix C). The Excel file was sent back to the City for re-upload into the City’s GIS system so that the City would have the most accurate and complete data from the survey. The GIS data concluded the deliverable for the City to incorporate into its Historic Resources Inventory.

PHMC required a slightly modified spreadsheet to update its CRGIS database. A copy of the City’s database spreadsheet was modified by removing irrelevant data fields, by reformatting column headings to use CRGIS naming conventions, and by adding primary (i.e. common) Inventory ID records for grouped resources that share a key number. Information included in the primary record for the resource group included such fields as address range, architectural styles, and materials. The primary Inventory ID number consists of the CRGIS Key Number plus the suffix .0001, and related resources are numbered sequentially beginning with the suffix .0002. Thus, for a grouped resource with Key Number 123456, the primary record’s Inventory ID would be 123456.0001 and the first related resource’s Inventory ID would be 123456.0002.

Historical Context/Background History

Introduction

Allentown and Knoxville are two of the six neighborhoods in City Planning Sector 6, Mt. Washington and Hilltop West. Allentown and Knoxville lie adjacent to one another and immediately east of Beltzhoover Avenue, a north-south thoroughfare that separates them from the Sector 6 neighborhoods of Beltzhoover and Mt. Washington to the west.

Allentown is situated closer to the Monongahela River and bounded by Arlington Avenue to the north, Cedarhurst Street to the south, Beltzhoover Avenue to the west, and the alignment of Amanda Avenue to the east. At its northwest, the neighborhood includes part of Emerald View Park, a city park formed from a combination of smaller parks and greenways in 2012.

Knoxville lies south of Allentown. It is bounded on the north by Cedarhurst Street; on the south by St. John Vianney Cemetery in Carrick; on the west by Beltzhoover Avenue, McKinley Park, and Tarragonna Street; and on the east by Amanda Avenue and Brownsville Road.

Allentown

Allentown was named for Joseph Allen, an English butcher, who purchased 124 acres in this location in 1827. At the time, the property was located in St. Clair Township, one of the seven original townships in Allegheny County. It had been part of extensive lands south of the Monongahela River owned by John Ormsby, a colonel in the British army. In recognition of his service during the French and Indian War, Ormsby received a land grant of about 3,000 acres in the present South Side Flats in 1763. In 1791, Ormsby added two large tracts purchased from descendants of William Penn. These included parts of Mt. Washington, Beltzhoover, and Allentown. In 1794, Ormsby sold 248.5 acres to Melchor Beltzhoover. Beltzhoover willed the land to his sons in 1806. One of his sons, Jacob, continued running the family farm, tavern, and tannery. Another son, Daniel, sold his 124 acres to Jeremiah Warder in 1826. The next year, Allen purchased this share of land from Warder.

Allen established a farm on his purchase. He added 27.5 acres and built a large house of sandstone from a nearby quarry on Freeland Street. The house faced present Warrington Avenue and stood alongside Beltzhoover Avenue, then known as Allen's Lane, and was surrounded by horse and cow pastures. The Allen homestead was partially destroyed by fire and rebuilt in 1867. Not long after, Joseph Allen moved to Greentree, and his heirs sold the farm for building lots. At around the same time, Allentown was incorporated (1870) and, in quick succession, annexed by the City of Pittsburgh (1872).

Prior to the 1870s, Allentown's built environment was sparse, consisting of scattered farmhouses and an inn, Heller Tavern, present by 1852 at the junction of Warrington and Arlington avenues (then the Washington and Brownsville roads). During the Civil War, the federal government built a powder magazine just west of the intersection of Beltzhoover and Warrington avenues, leading to the nickname

“Magazine Hill” (“Allentown: A Story of a Pittsburgh Neighborhood,” 4). None of these resources from Allentown’s earliest era survives.

Allentown’s rural character began to change in the 1870s when the contracting firm of McLain and Maple purchased both the Allen and Beltzhoover farms and laid out streets and lots. McLain and Maple was run by Benjamin McLain and his son-in-law, Thomas Maple, who named streets after themselves and their family members. Millbridge Street was originally called Maple Avenue; Manton Way was Maple Alley; and several streets were named after Maple’s children, including Lillian and Walter (other names were changed to avoid duplication when Allentown was annexed to Pittsburgh). An 1872 Hopkins map shows a house and outbuildings labeled “Res. of B. McLain” in the location described as that of the Allen homestead, suggesting that McLain might have occupied Allen’s house after purchasing his farm or built his own on the same or a nearby site. By 1890, this house belonged to Thomas Maple. It stood until the early 1900s, when the property was subdivided for several smaller homes.

The 1872 map shows that most of Allentown’s streets and lots had been platted by this time, but there were few houses or businesses. A two-story frame public school was built southwest of the intersection of E. Warrington Avenue and Millbridge Street in 1872 and expanded in 1877. The Schell family operated a hotel and tavern, the Lower St. Clair Hotel, in the location of the old Heller Tavern. A German United Evangelical Cemetery was located at the northern bend of Arlington Avenue.

Transportation improvements were critical to Allentown’s growth. Livery stables and horse-drawn omnibuses provided conveyance for Allentown’s earliest residents, but the steep grades of its main roads, Warrington and Arlington avenues, made for arduous trips. The inauguration of rail, incline, and streetcar lines helped make Allentown accessible to and from downtown Pittsburgh and the South Side mills in the late nineteenth century.

First was a narrow gauge railroad, the Castle Shannon Railroad, which opened in 1870. The line originated in the Castle Shannon coal mines and carried coal and passengers through the south hills. Because the Liberty Tunnels had not yet been built, the line crossed the hill above what is now the south entrance to the tunnels, ascended Warrington Avenue to Haberman Avenue, and entered a tunnel near the top of Coal Hill. At the other end of the tunnel, passengers transferred to an incline down to Carson Street. This railroad served Allentown until 1908.

In 1871, the Mt. Oliver Incline opened, connecting the South Side at 12th Street with the head of Mt. Oliver Street on the hilltop. A horse-drawn omnibus traveled Warrington Avenue between the incline’s upper station and Beltzhoover Avenue, helping to establish Warrington Avenue as Allentown’s primary commercial thoroughfare. Another incline, the Keeling Coal Incline, transported coal from a mine on Brosville Street down the same slope as the Mt. Oliver Incline.

In the last quarter of the nineteenth century, Pittsburgh’s annexation of about 20 surrounding boroughs helped consolidate outlying communities and downtown. As the city’s area grew too large for walking, horse-drawn streetcars were established to connect neighborhoods to one another. In 1888, the 13th Street Electric Line replaced horse-drawn streetcars with electric service operated by the Pittsburgh, Knoxville, and St. Clair Railroad, becoming the first west of the Allegheny mountains to do so. The line ran

through Allentown and Knoxville on its way from the South Side to Mt. Oliver. This line was short-lived but soon replaced with another electric streetcar, the St. Clair Electric Railway. The opening of a streetcar tunnel under Coal Hill in 1904 eliminated the circuitous routes around the hill.

By 1890, the Mt. Oliver Incline was no longer adequate to serve the hilltop community because it did not operate between midnight and 6 a.m., when many night shift workers needed it (“Allentown,” 44). The Pittsburgh Incline Plane—constructed by the Knoxville Inclined Plane Company, a subsidiary of the Knoxville Land Improvement Company, and more commonly known as the Knoxville Incline—provided a convenient new route between the South Side Flats and the hilltop when it opened in 1890. The 2,644-foot long Knoxville Incline was the longest in the city and had a 310-foot radius curve near the middle of its span between Allentown and the South Side. Its upper station in Allentown stood at the intersection of Warrington and Arlington avenues—replacing Schell’s hotel and tavern—and its lower station near 12th and Bradish streets on the South Side. The Knoxville Incline operated by steam when it opened and converted to electricity in 1918.

Most of Allentown’s building lots were initially purchased by German immigrants to the South Side who sought to move uphill to escape the pollution near the mills on the river banks. Some were mill workers, but many were artisans and small shop keepers, such as butchers and bakers. They built mostly frame houses and brought their language and culture, which permeated the community in the late nineteenth century. (Because modern Germany did not yet exist, the German-speaking residents of Allentown came from several small countries that were not politically unified, as well as parts of the Austro-Hungarian empire.) Other immigrant groups in Allentown were English, Irish, and Welsh.

Between about 1870 and 1930, the German community of Allentown formed a tight-knit ethnic enclave of middle-class merchants, businessmen, and artisans. There was a post office on Climax Street in Beltzhoover by 1882 and a Turnhalle (a chapter of the national Turnverein, a German ethnic, social, and athletic club) on the southeast corner of Allen Street and Manton Way by 1884. The Turnhalle included a Turner Building and Loan Society by which many Allentowners financed their homes (Weslager, 259). The Turnhalle has been demolished. The hilltop community also circulated several German language newspapers, and schools and churches conducted lessons and worship in German.

St. George’s Parish, an outgrowth of the German Catholic St. Michael’s Parish in the South Side, was formed in 1886. The Benz Brothers, South Side builders, constructed the first St. George church in that year on the site of the current building. The parish constructed St. George School at 833 Climax Street in 1893. Like the other churches in the community, St. George outgrew its original facilities in the early years of the twentieth century. The cornerstone for the new building was laid in 1911 and the present church, by German architect Herman Lang of the firm Edmund B. Lang and Brother, was completed in 1912. In 1914-15, St. George enlarged its complex with a convent at 843 Climax Street. A new, larger St. George School was completed to replace the 1893 school building in 1927 (its name was eventually changed to St. George Lyceum). Architect William Richard Perry designed additions and alterations to this building in 1954. Finally, an athletic and social hall, Schramm Hall, was added across the street from the school at 820 Climax Street in 1956. In 1994, the Catholic Diocese of Pittsburgh merged St. George with St. Canice

in Knoxville, St. Joseph in Mt. Oliver, and St. Henry in Arlington Heights to form the parish of St. John Vianney. The former St. George facility was deconsecrated in 2016.

Another early church in Allentown was the Hilltop United Methodist Church, organized in 1869 and chartered in 1874. Its first dedicated building was a frame chapel known as the Allentown Methodist Episcopal Church at 731 Excelsior Street. When the congregation needed a larger building, it purchased property at 631 Warrington Avenue and constructed the current building in 1891. Allentown M.E. merged with the German Methodist Church in 1935. The German Methodists had built a church on Millbridge Street, which they now sold, consolidating worship in the Warrington Avenue building. This was renovated in 1981. The earlier German Methodist church on Millbridge Street has been demolished.

After the Methodist Episcopal Church moved to Warrington Avenue, it sold its first building on Excelsior Street to the Bethlehem Lutheran Church, which first met in 1894. The Lutheran congregation built a new, larger, brick church, still standing on the site, in 1916.

A notable German resident of Allentown was John Eichleay, Jr. (1854-1922), an engineer and founder of the contracting company which still bears his name. Eichleay is credited with inventing technology to move buildings on rollers or skids, as well as a method to raise and lower them on hillsides using temporary artificial foundations (“Allentown,” 20). The company was founded in 1875 at Eichleay’s home at 1000 Arlington Avenue, which still stands. In 1902, the Eichleay Company was incorporated and moved its headquarters to Hays, but Eichleay remained in residence at his Allentown home until his death. By 1904, his property also included the former German United Evangelical Cemetery. What became of the interments, if there were any, is not known. A second brick house, present by 1910, also still stands on the original lot.

The Warrington Avenue business district thrived between about 1890 and 1930. In 1882, there were fewer than 40 buildings on the avenue. In 1884, store owners on its south side set aside twelve feet of their property for a sidewalk. By 1890, two years after the first electric streetcar ran through Allentown, the number of buildings on Warrington Avenue had almost doubled and almost all of the building lots were occupied. Over the next few decades, the commercial district continued to densify with the construction of additions, garages, and other alley structures on the rear portions of most lots. The street name changed from Washington Avenue to Warrington Avenue in 1910.

A few businesses and organizations were located south of Warrington Avenue, including a bank, a planing mill, and the Grand Army of the Republic Hall on Arlington Avenue; Bold’s Bakery, which expanded between about 1915 and 1925 to occupy most of the 800 block between Manton Way and Industry Street; the Turnhalle on Allen Street and Manton Way; and the Pennsylvania Sportsman Club, established in 1887 at Walter Street and Manton Way. Of these, the bank, bakery, and the Sportsman Club house still stand. The building at 800-802 Warrington Avenue is the former Hilltop Theater, which operated from 1914-1953. It was later converted to a 5-and-10 cent store, renovated again in 1981 as a supermarket, and currently serves as an event space for the adjoining Italian restaurant.

Growth of Allentown’s residential population during the same period created a demand for more and larger schools. In the mid-1880s, the original Allen School at Warrington and Millbridge was augmented

by rented rooms in two buildings, including the G.A.R. Hall, on Arlington Avenue. In 1885, the school board purchased property at Allen Avenue and Excelsior Street and built a two-story brick school known as Allen School No. 2. In 1892, this building was enlarged by architect John P. Bailey, and all three Allentown public schools were consolidated there. The school was remodeled in 1902 and operated until 1961, when it was replaced by a new school, Grandview Elementary, three blocks away at 845 McLain Street. The previous Allen School No. 2 was demolished in 1962, and the lot was purchased by the Bethlehem Lutheran Church for use as a parking lot. In 1983, it was sold to the Housing Authority of the City of Pittsburgh for the development of the Richard S. Caliguiri-Allentown Plaza apartment complex at 803 Warrington Avenue. This 10-story building, designed by Astorino, now contains senior apartments.

Allentown's other civic presence was Engine Company No. 21. The current brick building on Walter Street was designed by Richard Neff and replaced an earlier (1893) frame engine house in 1928. It is no longer a fire house, but it serves the City's Bureau of Emergency Medical Services.

In 1897, the City of Pittsburgh purchased the 18-acre George T. Robinson farm, at the brow of the hill at the north end of the Allentown, for what would become Grandview Park. In 1909, it added adjacent property on which the private Monongahela Water Company had erected two large water storage tanks. A merry-go-round was added and a picnic shelter house was constructed in 1913 on the foundations of the old Robinson farmhouse; neither survives. The concrete overlook platform was constructed in 1958. In 2012, Grandview Park became part of a new, 257-acre regional park, Emerald View Park, through combination with other parks, greenways, and formerly undesignated open spaces.

In 1927, Brownsville Avenue's name was changed to Arlington Avenue above Warrington.

Along with most Pittsburgh neighborhoods, Allentown declined in the mid-late twentieth century as the city's deindustrialization caused the loss of manufacturing jobs and, consequently, population and prosperity. At the same time, nationwide social and cultural trends contributed to the loss of neighborhood institutions, such as the Turnhalle, which closed in the 1940s. The growing popularity of automobile use since the 1920s also impacted Allentown. Incline ridership and revenue decreased, leading the Mt. Oliver Incline to close in 1951 and the Knoxville Incline to close in 1960. In the 1970s and 80s, the Allentown Civic Association worked with the Pittsburgh Parking Authority to find suitable sites for parking lots to serve the business district, and historic buildings were acquired and demolished for them. Other buildings throughout the neighborhood were demolished due to abandonment or neglect, leaving vacant lots in many blocks. Hilltop leaders fought to retain the 49 Warrington-Arlington streetcar route when the Port Authority proposed eliminating it in the 1970s; they succeeded in winning the reconstruction of Warrington Avenue in 1984-85 and of Arlington Avenue, in 1988, with the streetcar rededicated as the 52 Allentown route. However, in the early 2000s, streetcar service was reduced, and it was finally discontinued in 2011.

Knoxville

The borough of Knoxville was formed from a portion of the Beltzhoover lands in Lower St. Clair Township. It was named after Jeremiah Knox, a Methodist minister who arrived in the area around 1840 and married Sarah Bausman, the daughter of Jacob Beltzhoover and widow of Dr. Frederick Bausman. For her first marriage, Sarah Bausman had received part of her father's land, and Jeremiah Knox took over its management as a fruit farm. An apple grown in the orchards was known as Knox Russet. The Knox family also derived income from the mining of coal on their property ("Knoxville Borough: A History," 19).

Knox built a large, two-story frame house and several outbuildings and other structures, including a wine cellar, packing house, and reservoirs for watering crops. The Knox house stood until 1927 on the current site of Knoxville Junior High School. A small frame building that was part of the farm stands at 236 Rochelle Street, but has been completely remodeled as a dwelling, according to a community history prepared in 1939 ("Knoxville," 10).

Jeremiah Knox died suddenly in 1872. His son, William Wilbur Knox, took over the operation of the farm for a brief time, but in 1873, he and the other Knox heirs formed the Knoxville Land Improvement Company to lay out most of the property in building lots. The Mt. Oliver Incline had opened in 1870, making the Hilltop more accessible to workers from Pittsburgh and the South Side. Knoxville's location, on the second ridge from the Monongahela River, provided a natural topographical barrier from the soot and smoke that emanated from the mills and factories on the river's shores, making it an attractive location for those who could afford to move there. The company also assumed operation of the coal mines on the Knox property.

The Knoxville Land Improvement Company erected some houses on what is now the west side of Amanda Avenue—named for Jeremiah Knox's daughter—and on scattered lots nearby. Other streets were named for other family members and associates of W.W. Knox or for the products of the Knox farm. Jucunda Street is named after a prized variety of French strawberries grown there, Rochelle for a type of blackberry, and Arabella, Zara, and Grape streets are named for produce of the Knox vineyards. The alleys were originally named Apple, Peach, Pear, Plum and Strawberry.

The company sold other lots, beginning west of Amanda Avenue and south of Jucunda Street, at auction. The 1872 Hopkins map shows the street grid of Knoxville, but no houses; ten years later, Knoxville had almost 200 houses, most of them in its eastern half, as well as a school house, a shoe factory, and a chain factory. Knoxville incorporated as a borough in 1877. In 1880, its population was 393. The number of residents increased rapidly to about 2,500 by 1890 and between 6,000 and 7,000 in 1922. Knoxville's population peaked in 1940 at 8,024.

William Wilbur Knox died in 1888, and the remaining members of the Knox family moved out of the area. Knox's associate, J.F. Grimes, took over both the Knox homestead and the Knoxville Land Improvement Company. In the same year, the Pittsburgh, Knoxville, and St. Clair Electric Railroad added streetcar service to the Hilltop.

William Grimm, who worked for the Knoxville Land Improvement Company for 43 years until his retirement in 1930, wrote in 1926 that the company was a pioneer in the kind of large-scale community development that would come to typify company towns such as McKeesport, Clairton, and Donora: “At the time of the incorporation of the Knoxville Land Improvement Company... there was practically no organized effort by anyone to lay out towns, promote lot sales and build large numbers of houses and offer them to buyers on the monthly term plan” (William Grimm, “Memories of Knoxville,” in “Knoxville,” 50).

The Knoxville Land Improvement Company did not confine its activities to real estate development but formed numerous subsidiary companies to provide services for the borough, including the Knoxville Inclined Plane Company, the Knoxville Plumbing Company, Knoxville Electric Company, Knoxville Gas Company, Knoxville Paint Company, and Hilltop Ice Company. The Knoxville Land Improvement Company operated a brickyard which provided the materials for the construction of brick houses after 1880; this was first located around the site of the present Brick Way between Rochelle and Bausman streets. A row of houses known locally as The Brick Row (now mostly demolished) was built on this site by 1890 and the brickyard moved to the southwest corner of Grimes and Bausman. By 1923 the second brickyard site was covered in brick detached houses. The company also operated a planing mill and lumber yard on Zara Street between Knox and Amanda avenues in the 1880s. A stone quarry, located west of the second brickyard site on the rocky hillside between Grimes Street and Georgia Avenue, supplied the material for the foundations of Knoxville’s houses until about 1910. In this year, the Knoxville Land Improvement Company graded the land around the quarry and brickyard for a park in the block bounded by Grimes Street, Georgia Avenue, Rochelle Street, and Diana Way. A photograph from this period shows a ball field with a wooden grandstand. Houses stood on this block by the 1930s.

The land company prided itself on providing paved streets, “something no [other] rural community had” (Grimm in “Knoxville,” 50). It paved Knox Avenue, Amanda Avenue, and the section of Jucunda Street between them in the 1890s and completed the paving of most of the streets in the borough before 1900. It also constructed sanitary sewers and organized the St. Clair Water Company. In the late 1890s, it contracted with the Schultz Bridge Company to build the first bridge connecting the north and south parts of Knoxville over the Bausman Street ravine via Georgia Avenue. In 1901, it deeded the bridge to the borough. The Allegheny County Department of Public Works replaced this bridge with the concrete arch John P. Moore Memorial Bridge in 1928. Only the abutments of the Moore Memorial Bridge remain. It stopped carrying traffic in 1975 and was demolished in 1978.

The Knoxville Land Improvement Company aimed sales at middle class mill managers, merchants, and professionals by restricting the erection of frame houses and discouraging multiple dwellings. At the same time, the company offered attractive terms to encourage buyers, allowing them to make down payments and pay the rest of the price in rent. The company also donated two plots for the construction of churches and a 100 x 100 foot site for a Hilltop YMCA in 1912 after the closure of the one in the South Side (“Knoxville,” 12).

The double house at 133-135 Charles Street was reputedly an experiment of the Knoxville Land Improvement Company, erected under a tent in winter to allow construction to proceed regardless of

weather. “This arrangement proved to be unsatisfactory, however, and the experiment was not repeated” (“Knoxville,” 17). In 1897, the Knoxville Land Improvement Company purchased the 80-acre Giffen Farm south of Marland Street, which was covered by plum and apple orchards. By 1904 it had developed the land with 200 nearly-identical houses on a curvilinear street plan between Arabella and Daytona streets. The utilization of economies of scale in developing a neighborhood with only small variations among houses presaged later innovations in large-scale housing development, such as Levittown.

In the early-twentieth century, the Knoxville Land Improvement Company had its offices in a one-story frame building on Knox Avenue which also housed the borough’s post office and only telephone. Accounts of this building’s history differ. It was either moved east to Michigan Way, where it stands at number 139 (“Knoxville,” 16), or destroyed by fire in the 1950s (Jean Blevins, “Update—Since 1939,” in “Knoxville,” 63).

Knoxville’s residents were subject to many ordinances, including speed limits, curfews, a requirement for bells on bicycles and tricycles, and prohibitions against loafing on street corners, coasting on bicycles, and posting placards on trees, poles, or buildings. Before Knoxville had a zoning ordinance, it had a prohibition against slaughterhouses. The borough established a shade tree commission in 1923, and it still has a leafy character.

Knoxville had a two-story schoolhouse on the northwestern corner of Knox Avenue and Rochelle Street by 1881. As the borough’s population grew, a third story was added. A second school building, known as Knoxville School No. 2, was completed in 1902 across Rochelle Street from the first. Knoxville School No. 1 functioned as the elementary school and No. 2 housed the high school, also called Union High School. Knoxville School No. 1 was demolished and the present St. Canice School building was constructed on its site in 1960. Knoxville School No. 2 closed in 1980 and has been converted to the Rochelle Towers apartments.

By 1920, both of Knoxville’s public schools were at or above capacity, and the borough purchased the 2.65-acre remaining tract of the original Knox estate from the Knoxville Land Improvement Company to build a junior high school. This was the borough’s second attempt to purchase the Knox homestead for a civic purpose; it has previously proposed to buy the land for a public park, but voters defeated the funding bond issue. In the early 1920s, the old Knox mansion was first converted to classrooms while the borough financed and planned a new purpose-built school. Construction began in 1926. As it was underway, in 1927, Knoxville was annexed to the City of Pittsburgh, and the Pittsburgh Board of Public Education took over the project.

The original Knoxville Junior High School, which first shared its site with the school house in the converted Knox mansion, was designed by Press C. Dowler, who also designed Beechwood School. It had only twelve rooms and remains visible as the symmetrical portion with a projecting center bay which is seen in the east side of the present building. In 1931, Dowler extended this original structure with a one-story cafeteria and boiler room wing to the south and a long narrow spine to the west. The spine had classrooms only on its south side and was designed to accommodate a further addition on its north. This came in

1935 when the hall was double-loaded with the construction of the auditorium, gym, and pool in the section which now forms the Charles Street façade. Also at this time, additional floors were added to the cafeteria wing, and a southwest wing of shop and business rooms was constructed, completing the building as it presently stands. The 1935 addition to Knoxville School was built under Board of Education staff architect Marion M. Steen and subsidized with federal funds made available through the WPA. Dowler served as consulting architect and may have been the actual designer.

Across Grimes Street, facing Zara Street, is the building that once housed the Byron W. King School of Oratory. Byron King first taught speech and drama at Curry College in downtown Pittsburgh, then opened his own school of oratory, elocution, and dramatics. He purchased the building at the corner of Grimes and Zara in 1912 and remodeled it to hold an auditorium, studios, and a dormitory. The school continued to function after King's 1924 death until at least 1939. The date it closed is not known.

Library facilities in Knoxville were initially housed on the second floor of the No. 2 school. The present Knoxville branch of the Carnegie Library of Pittsburgh was built on Brownsville Road in 1965 to the design of Paul Schweikher, head of Carnegie Mellon School of Architecture, and received modern updates in 2016.

Knoxville's churches date mostly from its heyday of construction and growth in the late-nineteenth and early-twentieth centuries. The St. Canice complex on Orchard Place consists of the church (1894) and two chapel additions (1928 and 1932), school (1903, enlarged 1908 and 1923), convent (1913, enlarged 1930), and rectory (rebuilt in 1928 after fire destroyed the original in 1927). The Catholic Diocese of Pittsburgh merged St. Canice with churches in Allentown, Mt. Oliver, and Arlington Heights in 1994 to form St. John Vianney Parish; it closed the St. Canice buildings in 2005 and sold them in 2012.

In the 400 block of Orchard Place, the 1930 addition to the former Christ Evangelical Lutheran Church still stands, attached to a newer house of worship. This complex was purchased by St. Paul's AME Church in 2000.

A United Presbyterian Church present on the northeast corner of Georgia Avenue and Charles Street by 1899 has been demolished, leaving a vacant lot.

Knoxville Presbyterian Church was one of the first organized in Knoxville (1877) and was initially housed on a lot provided by the Knoxville Land Improvement Company on Jucunda Street; stone for the church's foundation was also donated by the company. When the church outgrew this building, it sold it to the Knoxville Christian Church, which moved it to a location farther east on Jucunda Street. The Presbyterians erected a new building on the original site in 1894. After this was damaged beyond repair in 1902, the congregation voted to build again. The present church at the corner of Knox and Jucunda was dedicated in 1903 and is now occupied by the Knoxville United Church.

The Methodist Protestant Church was organized on the Hilltop in 1883 and built a church and parsonage on the northeast corner of Grimes Avenue and Zara Street in 1888. It built the stone building at Georgia Avenue and Zara Street (now Solid Rock Church) in 1908-1909. The King School of Oratory replaced the original Methodist Protestant church.

The Knoxville Christian Church built its current building on the adjacent block of Knox Avenue between Charles Street and Rentz Way in 1904 after outgrowing the former Presbyterian church it had occupied on Jucunda Street.

The Knoxville Methodist Episcopal Church at Knox Avenue and Marland Street was dedicated with the completion of the stone basement in 1900. The brick sanctuary was not finished until 1906.

The Maple Avenue Baptist Church built the building across Orchard Place from the Lutheran church and changed its name to the Knoxville Baptist Church when it moved here from Allentown in 1910.

St. Mark's Episcopal Church at Grape and Bausman streets (now Abundant Power Church) replaced a ca. 1890 frame church on the same site in the late 1920s. It closed in 1994.

The Knoxville Land Improvement Company closed in the mid-1940s. Along with the rest of Pittsburgh, Knoxville experienced decline after World War II. Its population dropped steadily through the late twentieth century until, by the early 2000s, it was half of its 1940 peak.

Previously Identified Resources

There are no City-designated Historic Landmarks or Districts in either Allentown or Knoxville. There is one National Register-listed resource in Knoxville, the Knoxville Junior School at 324 Charles Street. One other resource, the Knoxville Branch of the Carnegie Library of Pittsburgh, has been determined eligible for listing in the National Register.

The Pittsburgh Register of Historic Places, a historic resources survey conducted by the Historic Preservation Office of the Department of City Planning in 1992, identified the following 60 resources as potentially individually significant buildings, structures, and sites in Allentown and Knoxville.

Allentown:

225 Allen St. (St. George's Church, 1912)
300 Allen St.
319 Allen St.
1000-1002 Arlington Ave.
1227 Arlington Ave.
1307 Arlington Ave.
1335 Arlington Ave.
823 Climax St. (St. George's School, 1927)
843 Climax St. (St. George's Convent, 1915)
636 E. Warrington Ave. (Limbach Building)
719 E. Warrington Ave. (Bell Telephone)
746 E. Warrington Ave.
748 E. Warrington Ave.
816 E. Warrington Ave.
818 E. Warrington Ave.
827 E. Warrington Ave.
830 E. Warrington Ave.
625 Excelsior St.
731 Excelsior St. (Bethlehem Lutheran Evangelical Church, 1916)
840 Excelsior St.
856 Freeland St.
606 Industry St.
608 Industry St.
630 Industry St.
919 Industry St.
602-626 Lillian St. (even)
632 Lillian St.
834 Lillian St.
50 Millbridge St.
207 Millbridge St.

410 Millbridge St.
211 rear Walter St. (carriage house)
216 Walter St. (Engine Co. 21, Richard Neff)
224 Walter St.
317 Walter St.

Knoxville:

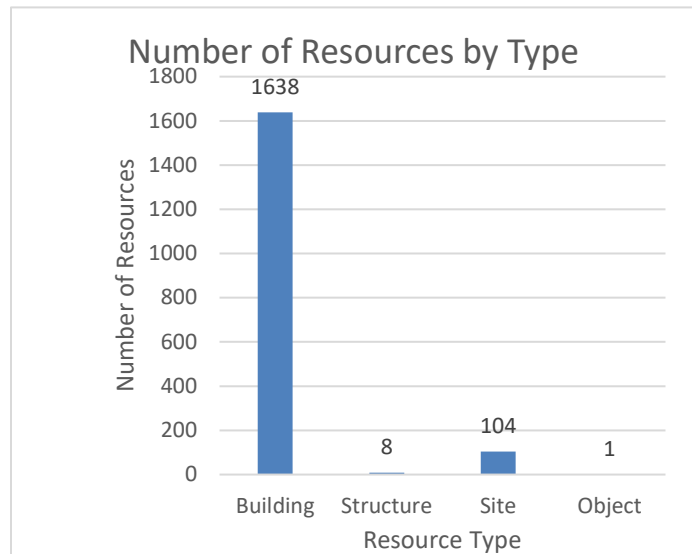

132 Amanda Ave. (note this property was not surveyed; it is actually located in Mt. Oliver Borough)
300 Brownsville Rd. (St. Clair Savings and Trust)
324 Charles St. (Knoxville Junior High School, 1927, 1931, 1935)
402 Georgia Ave. (note: property not identified in survey; address must be in error, as there are no ca. 1870 buildings near this part of Georgia Ave.)
401 Jucunda St.
96 Knox Ave.
98-98 1/2 Knox Ave.
107 Knox Ave. (former Knoxville School No. 2)
119 Orchard Pl.
140 Orchard Pl.
142 Orchard Pl.
248 Orchard Pl.
332 Zara St. (Fellowship Temple, 1908)

Forty-two (42) resources in Allentown and Knoxville have been recorded in the Pennsylvania Historic Resources Survey, which is maintained by the Pennsylvania State Historic Preservation Office in Harrisburg. Of these 42 resource, 26 also were documented in the 1992-93 Pittsburgh Register of Historic Places Survey. See Appendix C, Table 3 for a complete list of previously identified resources in Allentown and Knoxville.

Results

Summary of Findings

There were 2,131 resources, including the entirety of the Allentown neighborhood and the northern portion of Knoxville, surveyed during this effort. Of these, 2,055 resources (96.5%) were newly surveyed (see Appendix B, Figure 2 for location of previously and newly surveyed resources). Resources previously recorded by PA SHPO or by the City of Pittsburgh (e.g., listed in the City’s 1993 Pittsburgh Register of Historic Places inventory) were also checked and updated; these comprised 76 (3.5%) of the total

resources surveyed. Surveyed properties were evaluated for integrity and given a “High,” “Medium,” or “Low” rating (see Appendix B, Figure 3 for a map of resources with integrity ratings). Vacant parcels and those on which previously-known resources had been demolished were also notated in the tablets during the survey. Resulting data were used to identify individual properties with potential significance in the history of Allentown, Knoxville, and the City of Pittsburgh, and to evaluate the presence of potential NRHP-eligible and City historic districts.

One resource in the survey area, Knoxville Junior High School, is already listed in the National Register as part of a Multiple Property Listing of Pittsburgh Public Schools prepared in 1986. One other resource, the Knoxville Branch of the Carnegie Library of Pittsburgh, has been determined Eligible for the NRHP by the Pennsylvania State Historic Preservation Office. Two resources, the YMCA Hilltop Branch and Knoxville Public School No. 2, have been determined Not Eligible for the NRHP by the Pennsylvania State Historic Preservation Office. Including these resources and those newly surveyed, this effort found 71 resources to be potentially eligible for the NRHP.

Seven previously-recorded resources were found to be demolished:

- St. George Rectory (Key No. 009666; Unevaluated)
- Knoxville United Presbyterian Church (Key No. 007613; Unevaluated)
- 600 Lillian St. (Key No. 007691; Unevaluated)
- 632 Lillian St. (Unevaluated)
- 50 Millbridge St (Unevaluated)
- 424 Daytona St. (Key No. 208475; Not Eligible)
- First German Methodist Church (Key No. 009672; Unevaluated)

The active period of development in both Allentown and Knoxville begins about 1870 and extends to about 1930, with the majority of resources (69 percent) concentrated in the period between 1880-1910. Pre-1880 resources were found north of E. Warrington Avenue in Allentown and east of Knox Avenue in Allentown and Knoxville (see Appendix B, Figure 4). Only 39 resources in the survey area (2 percent) were constructed after 1975.

Throughout the survey area, only about half of the resources rated for style (833 of 1,630, or 51 percent) were assigned a style. The most commonly assigned were Italianate, Queen Anne, Colonial Revival, and Bungalow/Craftsman (See Appendix B, Figure 6 for map depicting location of resources with the four most common styles). The rest (797 or 49 percent) were assigned as “No Style,” either due to vernacular original design or to later alterations which obscured their original characteristics. The survey area contains a considerable number of vacant lots—384, or 18 percent of properties surveyed—but because these area scattered throughout both neighborhoods, their impact is dispersed (see Appendix B, Figure 7 for location of vacant properties).

NRHP listed, NRHP eligible, and potentially significant individual resources throughout the survey area are listed in Appendix C, Table 2 and mapped in Appendix B, Figure 5. Previously surveyed resources are listed in Appendix C, Table 3 and mapped in Appendix B, Figure 2. Pre-1880 resources are listed in Appendix C, Table 4 and mapped in Appendix B, Figure 4. Appendix C, Table 5 lists all newly surveyed resources.

Types of Resources

Allentown and Knoxville are adjacent neighborhoods with similar histories. Both were developed from farms beginning in the 1870s, when reliable transportation reached the Hilltop. But they were found to have distinctive historic and architectural characters. Allentown is centered on its commercial district, E. Warrington Avenue and has little relationship to its greatest civic amenity, Grandview Park, which lies along its northern ridge. Its predominantly frame houses exhibit a relatively greater number of alterations and substitute materials than those in Knoxville. Although the majority of buildings in Allentown and a number of buildings in Knoxville are of frame construction, only 53 buildings in the entire survey area (3 percent) exhibited wood as their primary wall material at the time of this survey.

Knoxville has a more substantial, suburban character, with mostly brick houses sited on somewhat more spacious lots and tree-lined streets. Knoxville has no public open space, however, and it has only half a commercial district located at its outer edge (Brownsville Road, the other side of which is in Mt. Oliver Borough). The interior of the Knoxville neighborhood is almost all single-family houses interspersed with several small, almost domestic-scale churches. Knoxville’s historical and architectural center is its block-large public junior high school, which is the only resource in the survey area listed in the NRHP. But because the school is closed, its vacancy is also symbolic of Knoxville’s loss of population and civic gravity.

Allentown

Allentown’s built environment illustrates that it developed, like many Pittsburgh neighborhoods, as a tight-knit ethnic village centered around its own main street and community institutions—such as the Turnhalle and St. George Catholic Church and School—which supported the strong German culture of its early residents. Today, the Turnhalle has been demolished and St. George is closed. St. George’s rectory has also been demolished, but the Romanesque Revival church, with its immense size and soaring towers, remains the most architecturally impressive in Allentown, and one of the only remaining buildings which recalls the neighborhood’s European culture of 100 years ago. (Other churches in Allentown and Knoxville are smaller buildings tucked onto corner or mid-block sites, designed in vernacular and/or American idioms.) Along with the St. George School and social hall, St. George Church still anchors an architecturally and culturally significant complex at the heart of Allentown.

A commercial street, E. Warrington Avenue, cuts across Allentown from east to west. It is lined with two-to-three story buildings, most of historic age and with traditional storefronts on their ground floors. An unusual number of them are of frame construction. A few buildings on Warrington Avenue, such as the Limbach and Bell Telephone buildings, stand out for their exceptional design and/or craftsmanship. These, along with E. Warrington Avenue’s highest-integrity frame buildings, were marked as potentially individually eligible by this survey. As an ensemble, however, the architecture of E. Warrington Avenue is not especially notable. The E. Warrington Avenue streetcar line, long a distinctive feature of Allentown’s commercial district, is defunct, though the tracks remain.

The commercial district also extends for a short distance onto adjacent blocks of Y-shaped Arlington Avenue. The former site of the upper station of the Knoxville Incline, the intersection of E. Warrington and Arlington was historically the heart of Allentown, but now holds a nondescript one-story convenience store set back behind a surface parking lot. Arlington Avenue’s most impressive commercial buildings are the former Mosebach’s Electrical Supply buildings at number 1109, just downhill from the former incline station site. Each of the two adjoining, three-story buildings is ornamented with a different style of

patterned brickwork, making the complex a unique representative of vernacular commercial architecture. The company's history as a supplier of electrical equipment for coal mines also places it in the historical context of Pittsburgh's and the region's history of industry and the extraction of natural resources.

Allentown has few non-residential properties outside of the E. Warrington-Arlington commercial district. A couple former "corner store" buildings are found on Knox Avenue, which is a secondary thoroughfare through Allentown to Knoxville, but the storefronts have been converted (or re-converted) into residences. No. 120 Millbridge Street is a high-integrity brick building which historically functioned as an undertaker and funeral home.

North and south of E. Warrington, a regular grid of residential streets ascends and descends Allentown's steep hillsides, with Arlington Avenue cutting diagonally through the neighborhood's east side. Befitting the artisan and merchant classes of Allentown's residents, most of the houses in the neighborhood are compact, two- to two-and-a-half-story frame residences situated close to one another. The earliest houses date from the 1870s and are found north of E. Warrington and east of Knox avenues. Construction continued through the first decades of the twentieth century, but little was constructed in Allentown after about 1930. Surveyed residences are mostly vernacular examples of the Italianate, Queen Anne, and Colonial Revival styles.

A few repeated patterns were observed, perhaps indicting the work of individual builders; for example, a two-story, three-bay side-gable house with a small decorative gable in the roofline above the central bay. An intact example is found at 119 Orchard Place in Knoxville (a partially intact example in Allentown is located at 808 Lillian Street), but many others are recognizable only by their form. Where once a high degree of carpentry and craftsmanship was evident in the wood construction and ornamentation of Allentown's frame houses, today most of this has been removed or obscured under siding. A few high-integrity houses were marked as potentially individually eligible because they exemplify the vernacular Victorian architectural character which was once pervasive in Allentown.

Other potentially-eligible houses stand out for their size, siting, and/or design, such as the fine Second Empire houses at 1227 and 1335 Arlington Avenue. The size and dramatic siting of the red-brick, Italianate house at 1000 Arlington Avenue is a reminder of the stature of its historic owners, T.S. Maple and John Eichleay, Jr., while later brick house on that property (now 1006 Arlington Avenue) also contributes to the story of those influential early residents of Allentown. A Gothic Revival house at 1307 Arlington has only borderline integrity, but it can still be recognized as a prominent early residence by its siting, set apart on a large lot on the rise of the hill between Industry Street and Proctor Way. East of this house, a row of four Queen Anne/Colonial Revival Style brick houses is notable as a small concentration of substantial brick residences in the midst of more modest frame dwellings.

Apartment buildings are rare throughout the survey area. A small but striking example stands at 404 Walter Street. The building's highly original ornamentation and composition suggest the work of a professional architect familiar with contemporary trends elsewhere in the United States and Europe. Its similarity to another apartment building in the East End (at Ellsworth Avenue and Copeland Street in

Shadyside) further sets the design of 404 Walter apart from the local vernacular found throughout the rest of Allentown.

Allentown's street plan, its commercial district, and its housing show little relationship to its primary civic asset, Grandview Park, because the park was developed after most of the rest of the neighborhood. Even Grandview Elementary School, built at the edge of the park in 1961, is oriented to the street, not the green space. Grandview Park is an elegant landscape whose high, sloping elevation provides stunning views of downtown Pittsburgh and the rivers. A stone block double staircase marks its entrance at the top of Beltzhoover Avenue. Its 1958 concrete viewing platform/amphitheater needs attention, but its ornamental, patterned wall tile remains intact though obscured by gray paint. Grandview Elementary (1961) was marked potentially individually eligible because it is worth expanding the context of Pittsburgh Public School buildings to consider the role of mid-twentieth century schools. In Allentown, Grandview Elementary replaced a nineteenth century schoolhouse, which was likely considered outdated and unsuited to modern educational theory and practice.

Other than Grandview School, Allentown's only other purpose-built civic building is the former Engine House No. 21 (now EMS Station 8) at 212 Walter Street. This fine little Tudor Revival building is the only one of this style in Allentown. The former bank at the corner of E. Warrington and Arlington avenues, after a stint as a youth hostel, now houses the Zone 3 Department of the Pittsburgh Police.

Knoxville

In Knoxville, this survey found a predominantly residential neighborhood constructed in two overlapping phases. The first phase began in the 1870s with the formation of the Knoxville Land Improvement Company to develop the former Knox farmlands in the northern part of the neighborhood. This phase was about three-quarters complete by 1900 but continued through about 1930. The second phase, in which the southern part of the neighborhood (below Bausman Street) as well as the quadrant between Beltzhoover Avenue and Rochelle and Grimes streets were built out, got underway after the Knoxville Land Improvement Company purchased those lands around the turn of the twentieth century.

Due to the constraints of time and human resources, the second phase of Knoxville's development was not part of the building-by-building survey conducted for this project. However, a windshield survey at the commencement of field work allows for some superficial observations concerning the relationship of the two phases.

Due to its longer period of development, the northern part of the neighborhood and the section east of Grimes and north of Marland Street show more diversity of building sizes, types, and styles. Frame houses, many from the 1870s and 1880s, are found almost exclusively east of Knox Avenue. Some brick houses from this period, both east and west of Knox, share distinctive stylistic features with their frame neighbors, namely attic windows with peaked upper sashes. Houses with this feature appear to have been built between about 1885-1890 and vary from narrow rowhouses to brick single-family houses. Zara Street, in particular, has a concentration of them, but they appear throughout the neighborhood, and a few are noted on Millbridge Street in Allentown, as well. These houses would ideally have been flagged in their survey records with a notation in the Comments field so that they could be counted and mapped

for further study. This was not done because project historians were already well into the survey when they recognized the number and similarity of the houses.

On the residential streets from Orchard Place to Zara Street, several small churches, which themselves have almost a domestic scale, stand amid the houses. A larger exception is St. Canice, whose complex at Knox Avenue and Orchard Place also includes an early-twentieth century parochial school, convent, and rectory. St. Canice's original 1894 Romanesque Revival sanctuary was enlarged in the 1920s and again in the 1930s, and its steeple is a landmark in Knoxville much as St. George's are in Allentown. The buildings of the historic St. Canice complex have been marked potentially individually eligible, as has the newer (1960) St. Canice School building at Knox Avenue and Rochelle Street. Like the contemporaneous Grandview Elementary in Allentown, the new St. Canice School was surely intended to offer a modern facility at a time when the urban district was losing families to the newly-built suburbs.

By far the largest and most imposing building in the neighborhood is the block-large Knoxville Junior High School, built in 1927 and expanded in the 1930s. With the former Hilltop YMCA and King School of Oratory on facing streets, this is the historic center of gravity of the neighborhood. The Hilltop YMCA and the King School building (545 Grimes Avenue) have borderline integrity, and the YMCA was previously determined ineligible for the NRHP, but this survey found it worthy of re-evaluation due to its significance as a neighborhood institution. Both were counted as potentially individually eligible.

One Knoxville resource with possible historical associations was not marked as potentially individually eligible due to deficits in documentation and integrity. The house at 236 Rochelle Street, is said to be a remnant of the Knox Farm remodeled as a dwelling in the early twentieth century. Historic mapping shows this building to have been a double house in the early-twentieth century (it has since been converted to a single dwelling). Its origin was not confirmed during this survey, and the building lacks historic integrity.

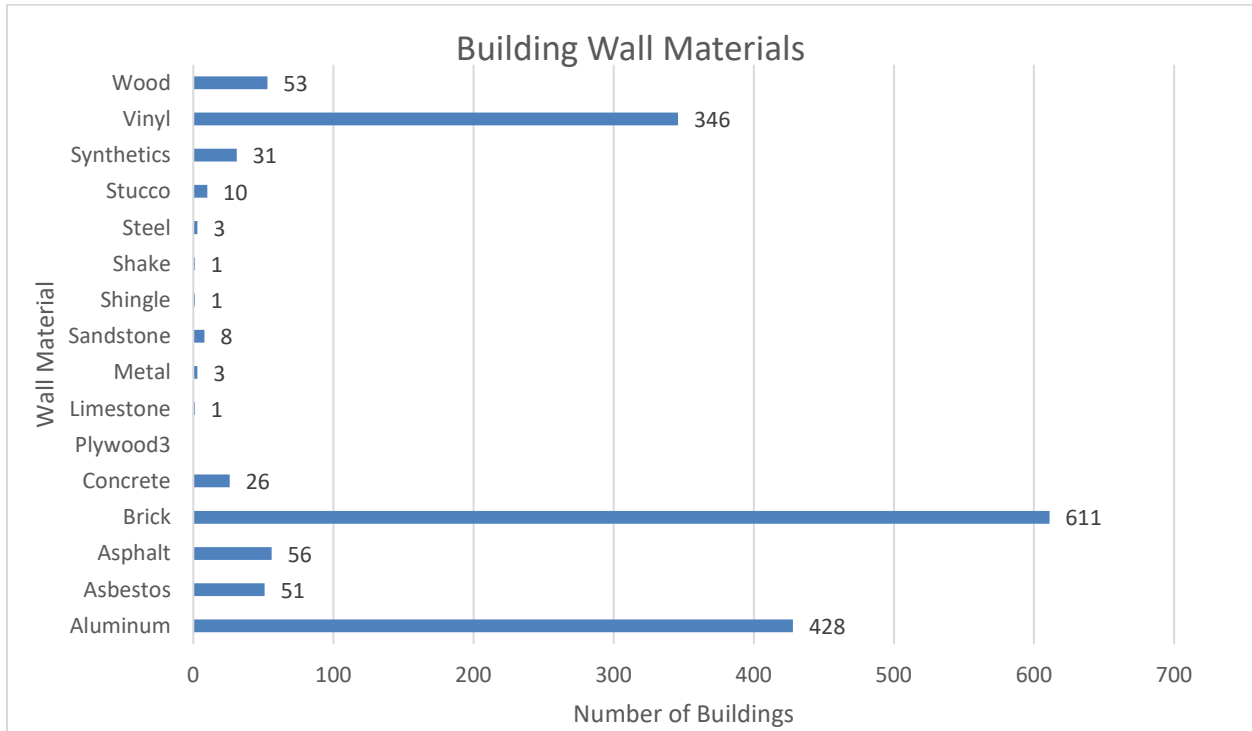

In the newer, southern section of the neighborhood are found narrower, curvilinear streets and tracts of identical or near-identical brick two- to two-and-a-half story houses. Knoxville's business district lies at its eastern edge, along Brownsville Road, and is shared with the independent borough of Mt. Oliver across the street. Although Knoxville was a separate borough up to 1928, the only municipal building from Knoxville's independent period that survives besides its public schools is the former fire house at 430 Brownsville Road. However, this building was converted to apartments in the late 1920s and its façade does not reflect its original (1906) appearance. A former early-twentieth century telephone exchange building survives at 341 Orchard Place; this building has also been converted to apartments.

Integrity and Condition

The survey area has integrity of location and setting. Integrity of materials, design, and workmanship are moderate throughout the survey area but relatively stronger in Knoxville than in Allentown. Most properties have been altered in some way, most prevalently through the installation of artificial siding, the alteration of original openings, and/or the removal of original ornamentation and porches. Of 1,613 resources rated for integrity, 567 (35 percent) were ranked as low and 955 (59 percent) as medium. Only 91 (6 percent) of individual properties surveyed were ranked as high integrity. The condition of resources

was not formally ranked in this survey, but it was observed that deferred maintenance has had a detrimental effect on many historic-age properties, as have unsympathetic repairs and renovations by both resident-owners and absentee landlords.

Yet despite material decline, the survey area retains integrity of feeling as a modest-to-middle class residential area served by proximate commercial, religious, educational, and landscape resources. With few buildings constructed after 1910, and even fewer after 1930, Allentown and Knoxville also have integrity of association with the transformation of hilltop farmland to urban communities in the decades around the turn of the twentieth century.

Recommendations & Conclusions

Because this survey was designed to serve both the City of Pittsburgh and the PA SHPO, recommendations have been formulated for potential NRHP eligibility evaluations and for the use of survey data under the City of Pittsburgh's Historic Preservation Ordinance. We also bear in mind that successful historic preservation may take place independent of formal designation. Other recommendations pertain to properties meriting intensive-level study, and the overall methodology of this survey effort, in general.

Eligibility of Resources for National Register and City Listing

The National Park Service defines a district as a type of resource that “possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development” (*National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, 2002). This survey did not find the neighborhood of Allentown, nor the surveyed portion of Knoxville, nor any smaller sectors of either, to possess the significance and integrity necessary for eligibility as either a NRHP District or a City Historic District.

The historical research and a windshield survey conducted at the beginning of this effort did indicate potential for a historic district in the southern, later-developed sector of Knoxville. This area's curvilinear street plan and large-scale development with similar or identical houses suggest an early familiarity with modern principles of suburban planning and design and may be significant in this context. Further study is recommended, along with intensive-level survey of the area roughly bounded by Bausman Street to the north, St. John Vianney cemetery to the south, Brownsville Road to the east, and Beltzhoover Avenue and Tarragonna Street to the west.

Recommendations pertaining to individual resources which are potentially eligible for the NRHP and/or City Historic Structure designation are discussed below.

- 1. Recommend intensive-level survey of the area roughly bounded by Bausman Street to the north, St. John Vianney cemetery to the south, Brownsville Road to the east, and Beltzhoover Avenue and Tarragonna Street to the west.***

Individual Intensive Level Survey Recommendations

All of the resources in Appendix C, Table 2, “Potential Individually Eligible Resources,” are recommended for further study or intensive-level survey. Based on appearance and available background information, these resources have the potential to be eligible for listing in the NRHP and/or as individually-designated City Historic Landmarks.

2. *Recommend resources identified in Appendix C, Table 2, “Potential Individually Eligible Resources” for Intensive-Level survey.*
3. *Recommend resources identified in Appendix C, Table 2, “Potential Individually Eligible Resources,” with pre-existing Intensive-Level documentation, to be determined eligible for listing in the NRHP.*

Other Recommendations

Consistent with the findings of this survey, PreservePGH does not identify Allentown or Knoxville as potential historic districts, but it notes that Allentown’s street-level trolley tracks through the E. Warrington Avenue commercial district (though presently inactive) offer a distinctive asset to the neighborhood. We would go further to assert that the Allentown’s traditional “Main Street-style” business district itself is an asset to the neighborhood that should be preserved and enhanced, even if its architectural character does not merit conventional historic district designation. The commercial buildings of E. Warrington and Arlington avenues provide opportunities for local entrepreneurs to invigorate the neighborhood, enliven its public realm, and preserve its traditional character. To this end, Allentown is a designated Streetface District, meaning the commercial buildings of E. Warrington and Arlington Avenues are eligible for favorable loan terms on façade improvements through the Pittsburgh Urban Redevelopment Authority. Use of this program should be promoted and encouraged.

Of both Allentown and Knoxville, the plan also notes, “These neighborhoods have a large number of two-story brick dwellings and civic buildings from the turn of the twentieth century that present opportunities for preservation as catalysts for additional reinvestment.” Knoxville, in particular, possesses a substantial stock of well-built brick houses on manageable-sized lots and tree-lined streets which should be attractive to new residents. Some of the more interesting ones belong to the group of ca. 1885 houses with distinctive peaked windows in their front gables. A recommendation that these houses be counted, mapped, and studied by a future researcher might lead to a fuller understanding of Knoxville’s early development.

Knoxville Junior High School is also a tremendous asset. Its listing on the NRHP makes it eligible for Historic Tax Credits and poises it for adaptive reuse by a developer who appreciates its historic character. Rehabilitation of this major community landmark should be actively pursued.

Finally, the plan identifies the view from Emerald View Park as an opportunity to attract heritage tourism. The City’s purchase and development of Grandview Park at the northern ridge of Allentown brought a great civic amenity at the end of the nineteenth century. However, the present relationship between the neighborhood and the park is indistinct at best. With the City’s incipient master planning effort for Emerald View Park—a new regional park combined from various former small parks and greenways, including Grandview—there is an opportunity to address the improvement of connections between Allentown and this historic and scenic public landscape.

Use of Survey Data by City of Pittsburgh

Eligibility for the NRHP is not determinative of eligibility for City historic designation. Moreover, it is not the policy or practice of the City of Pittsburgh to initiate nominations for city historic designation, but rather to evaluate and act upon nominations submitted by community members, organizations, and leaders. Therefore, recommendations for use of survey data by the City of Pittsburgh pertain to the Historic Review Commission's responsibilities under the City of Pittsburgh Historic Preservation Ordinance, §1101.07(b), to:

- Carry on educational activities in furtherance of the purpose of [the Historic Preservation Ordinance];
- Act in an advisory role to City departments and agencies related to preservation matters;
- Act as a catalyst to expedite the flow of projects through departments and agencies;
- Facilitate the redevelopment of historic structures and districts in accordance with approved development plans of the city;
- Act as liaison on behalf of the City with preservation organizations, professional societies, community and other groups, private property owners, and interested citizens, concerning conservation of the historic resources of the city;
- Act as a liaison on behalf of the City with the State Historic Preservation Officer, agencies of the federal government, the Advisory Council on Historic Preservation, and the National Trust for Historic Preservation, concerning the historic resources of the city;
- Prepare plans for the conservation and development of historic resources;
- Undertake or encourage and facilitate the documentation of the architecture and history of the City's historic resources.

In furtherance of these goals, it is understood that the Department of City Planning intends to fully integrate the list of Potential Individually Eligible Resources and other survey data into its Geographic Information System (GIS), so that it may serve as a tool in all aspects of implementing the City of Pittsburgh's comprehensive plan. This will be important to highlight those potentially eligible resources until such time as any formal efforts are organized to maintain and preserve them.

In order to keep Architectural Inventory survey data up to date, it is recommended that the Department of City Planning coordinate with other city and county agencies to obtain and periodically update the Architectural Inventory database with information related to building construction or demolition. For example, on a regular basis data related to building demolitions and construction could be cross referenced with data from the Bureau of Permits, Licenses, and Inspections and the Allegheny County Assessor. Such interim data updates could utilize City Planning interns and would not typically require field checking.

As City Planning completes surveys of Pittsburgh neighborhoods, it is recommended that the survey data be shared with other community stakeholders and the PA SHPO to ensure its long-term preservation. An electronic database file (such as Microsoft Access) could be created with essential building attribute fields and photographs and should be saved on disk. A second file should be created in PDF format to ensure accessibility as computer programs and file compatibility change over time. Ideally, at least two paper copies of the survey data should be made. One paper copy would be kept in the City of Pittsburgh Archives and the other would be curated at a local independent archive. Possible community partners for data sharing are the Pittsburgh History and Landmarks Foundation, the Pennsylvania Department of the Carnegie Library of Pittsburgh and its Knoxville branch, the Archives of Industrial Society at the University of Pittsburgh, the Architectural Archives at Carnegie Mellon University, and the archives maintained by Preservation Pittsburgh.

- 4. Recommend the Architectural Inventory survey data, which has been incorporated into the City's GIS, be utilized while planning for the city, and when implementing aspects of the comprehensive plan.***
- 5. It is recommended that Pittsburgh Department of City Planning develop best practices to keep the database and GIS files relevant and useful in the long term and ensure its archival stability.***

It is also recommended that the Department of City Planning, through its Historic Review Commission, Historic Preservation Planner, and relevant Neighborhood Planner, continue the practice—piloted in Sector 1—of sharing survey results with the survey community in a meeting. In areas which have not traditionally had a strong culture of preservation awareness or action, including Allentown and Knoxville, the purpose will be to start a conversation about historic preservation in the surveyed community. In areas with established historic districts, the conversation may continue at a higher level about expansion of current preservation activities. Meetings should include a variety of stakeholders, including local community groups, preservation organizations, and residents and property owners, as well as Historic Review Commission representative(s), city officials, and PA SHPO staff. Ideally, the survey area's City Council representative would host the meeting at a location within the survey area. A typical meeting agenda might be:

- Introductory presentation about the benefits historic preservation (for “new” communities) or the accomplishments of historic preservation to date (for “experienced” communities);
- Summary overview of historic preservation tools and practices (NRHP, local designation, tax credits, etc.);
- Description of survey activity and presentation of results in that neighborhood or sector;
- Discussion of how City will use data and possibilities for how the community might use it;
- Question and answer.

In addition, convening a community meeting prior to the start of the survey to inform residents and property owners of the project’s goals, prepare them for the presence of surveyors on the streets, and gather community-based information will be helpful to future survey efforts.

- 6. *Recommend the results of the Architectural Inventory and survey data be shared with subject neighborhoods at a neighborhood or district meeting.*
- 7. *Recommend convening a community meeting prior to the start of future surveys.*

Methodology of the Project

Within the confines of the current project, surveyors gathered data on 76 previously surveyed resources and 2,055 newly surveyed resources (see Table 1, below, for estimates of survey completion; Appendix C, Table 5 for a list of newly surveyed resources).

Table 1: Survey Completion			
	Surveyed Parcels to Date (Architectural Inventory Phases 1-7)	# Parcels City-wide	% Complete City-wide
Not Previously Surveyed	13, 991	139,375	10.0%
Previously Surveyed	827*	13,385	6.2%
Total	14,818*	152,760	9.7%
* <i>Previously Surveyed refers to parcels surveyed prior to the commencement of the Pittsburgh Architectural Inventory. This number excludes 53 previously surveyed resources in Sector 1 whose tax parcels have been abolished.</i>			

Surveyed Properties

The survey of the Hilltop neighborhoods of Allentown and Knoxville is the eighth phase of an on-line, tablet-based data collection method piloted in City Planning Sector 1. In this survey, consultants used PC-platform tablets purchased by Michael Baker after the City retired the iPads utilized for previous surveys. Survey team members also carried wireless hot spots (also purchased by Michael Baker) to ensure consistent wireless coverage needed to save and update data throughout the survey area. The same data collection application used in previous surveys, Collector for ArcGIS, was loaded onto the new tablets for use in the field.

During this survey, the project team experienced some familiar problems with hardware and software. A persistent hardware problem throughout all the City surveys has been the limited battery life (less than an 8-hour work day) of each tablet. In the past, the City had enough iPads to equip each member of the

survey team with two tablets. Or, if a large team required the use of all the tablets at once, we were able to utilize portable battery packs to recharge in the field.

The new tablets are not compatible with mobile chargers, and there are not enough of them to assign two to each surveyor. The survey team relied on outlets in the establishments where we ate lunch to recharge our tablets halfway through the day.

In this survey, consultants had a better understanding of a problem which affected previous surveys, i.e. the failure of some photographic attachments to save. We learned that editing the same record twice in a row, then submitting an attachment to a new record, would cause the attachment to the first record to be erased. With this knowledge, we were able to prevent the loss of attachments and preserve a complete record for each surveyed resource. The application bug appears to be limited to the MS Windows version of ArcGIS Collector.

Other, persistent problems with survey methodology mostly pertain to gaps between data collection in the field and its accurate representation in tables and maps, which need to be created afterward in the office. Because mapping is generated on the basis of tax parcels, it cannot represent all the data collected in the field, for example: multiple addresses and/or multiple uses per parcel, and/or multiple uses in a single building, complex, or group of related buildings. A second “Use” field would allow the collection of more complete data, but it would not solve the issue of overly-simplistic mapping.

In this survey, a significant amount of office time continued to be devoted to manually assigning Primary Key Number records for historically related resources (e.g. groupings of identical attached houses or building complexes). It may be worth re-visiting the necessity of this practice on a large-scale survey with PA SHPO inventory staff. Eliminating the documentation of related resources, particularly for neighborhoods with a high proportion of rowhouses, would streamline survey and data processing.
