The Architectural Inventory for the City of Pittsburgh, Allegheny County, Pennsylvania, was made possible with funding provided by the Pennsylvania State Historic Preservation Office (PA SHPO), the City of Pittsburgh, and the U.S. Department of the Interior National Park Service Certified Local Government program.

The contents and opinions contained in this document do not necessarily reflect the views or policies of the Department of the Interior. This program receives federal financial assistance for identification and protection of historic properties. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, as amended, the U.S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, disability, or age in its federally assisted programs. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to: Office of Equal Opportunity, National Park Service; 1849 C Street N.W.; Washington, D.C. 20240.

## Abstract

This Architectural Inventory for the City of Pittsburgh (Planning Sector 14: Oakland) is in partial fulfillment of Preserve Policy 1.2, to **Identify and Designate Additional Historic Structures, Districts, Sites, and Objects** (*City of Pittsburgh Cultural Heritage Plan, 2012*). This project is the tenth phase of a larger undertaking which aims ultimately to complete the architectural survey for all of Pittsburgh's Planning Sectors. The scope of this project provided for a partial inventory of Pittsburgh's North Oakland, West Oakland, Central Oakland, and South Oakland neighborhoods in Planning Sector 14.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register of Historic Places (NRHP) listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive-level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

All previously surveyed resources within the four Oakland neighborhoods were field checked and an updated survey record was prepared. The survey area contains parts of two historic districts that are listed in the NRHP. Within the four Oakland neighborhoods in Planning Sector 14, the survey documented 150 properties in Schenley Farms Historic District and two (2) properties in Schenley Park Historic District. In addition, project historians considered whether any new areas could qualify as potential historic districts within Oakland. Boundaries were recommended for five areas that appear to have potential significance as historic districts: Oakland Square; the United Real Estate and Construction Company's H.L. Dean Plan; the Hardie Brothers Block; Automobile Row; and McKee Place.

Project historians surveyed the following resources:

### PREVIOUSLY SURVEYED

- 918 Previously Surveyed Extant Resources
- 10 Previously Surveyed Resources – Now Demolished and not replaced
- 4 Previously Surveyed Resources – Now Demolished and replaced
- **932 TOTAL** Previously Surveyed Properties *Resurveyed*

### NEWLY SURVEYED

- 1,071 **TOTAL** Newly Surveyed Resources

### TOTAL SURVEYED

- 2,003 **TOTAL** Resources

## ELIGIBILITY RECOMMENDATIONS

- 8 Previously Surveyed Resources Individually Listed in the NRHP.
  - 8 Previously Surveyed Resources – Previously Determined Individually Eligible for the NRHP
  - 87 Resources without an individual NRHP eligibility determination – Recommended Potentially Individually Eligible for the NRHP
- 
- **95 Eligible or Potentially Eligible Resources** Recommended for Intensive-Level Survey (or, if already determined eligible, formal NRHP listing)

Research documented 28 previously surveyed resources that were determined not individually eligible for the NRHP. Of these resources, the survey confirmed that 27 were extant and one (1) was demolished. No changes in NRHP eligibility are recommended for the 27 extant resources.

This survey also identified six streets (or portions of streets) with brick or stone pavement as potentially eligible as part of a larger city-wide district comprising all streets with historic pavement.

This project was administered by the City of Pittsburgh with support from PA SHPO staff. Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards (36CFR61)* for history and/or architectural history. Consulting firms include Michael Baker International, Inc., Clio Consulting, and Cosmos Technologies, Inc.

This project was funded in part by a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant, the program guidelines of which can be found at [http://www.portal.state.pa.us/portal/server.pt/community/grants/3794/certified\\_local\\_government\\_grant\\_program/417950](http://www.portal.state.pa.us/portal/server.pt/community/grants/3794/certified_local_government_grant_program/417950).

## Introduction

In 2013, the City of Pittsburgh received a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant for partial funding of an architectural inventory of Pittsburgh neighborhoods. The present survey (phase ten of the Pittsburgh Architectural Inventory) focuses on Planning Sector 14's North Oakland, West Oakland, Central Oakland, and South Oakland neighborhoods. The survey was conducted in November 2020, and the report was compiled in December 2020. Previous phases of the survey include:

- Planning Sector 1 Troy Hill Neighborhood, October 2014.
- Planning Sector 1 Spring Garden and Spring Hill-City View neighborhoods, February 2015.
- Planning Sector 12 Larimer Neighborhood, September 2016.
- Planning Sector 5 Carrick Neighborhood, October 2016.
- Planning Sector 5 Brookline Neighborhood, September 2017.
- Planning Sector 4 West End and Elliott neighborhoods, September 2018.
- Planning Sector 2 Brighton Heights Neighborhood, May 2019.
- Planning Sector 6 Allentown and Knoxville neighborhoods, September 2019.
- Planning Sector 15 Middle Hill, Bedford Dwellings, and Terrace Village neighborhoods, October 2019.

The City of Pittsburgh is divided into 16 planning sectors. Each sector contains a number of neighborhoods and is delineated based on a number of factors, including neighborhood and ward boundaries and topographical features. The City chose to focus the tenth phase of its Architectural Inventory on the Oakland neighborhoods to gain a comprehensive understanding of its development and extant historic-age resources because the area has not been previously studied in a holistic way and because of the high level of development pressure, particularly for institutional uses along the Fifth and Forbes corridor. After three weeks of survey work, project historians surveyed 2,003 resources, of which 1,071 were newly surveyed and 932 were previously surveyed (Appendix B, Figures 1-5). This represents a partial survey of all four Oakland neighborhoods. Properties were recorded using the PA SHPO minimum survey requirements (see Appendix A). Survey data were uploaded in real time to the City's Geographic Information Systems (GIS) database via tablet computers. These data were later re-formatted and transmitted to PA SHPO in a Microsoft Excel file in accordance with PA SHPO's Cultural Resources Geographic Information System (CRGIS) requirements.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register of Historic Places (NRHP) listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive-level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

***Qualifications***

Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards (36CFR61)* for history and/or architectural history. Project historians included Jesse Belfast and Justin Greenawalt, of Michael Baker International, Inc., and Angelique Bamberg of Clio Consulting. Project maps and data tables were compiled by Chirag Moradiya of Cosmos Technologies, Inc.

## Goals and Objectives

In 2012, the City of Pittsburgh Department of City Planning released its Cultural Heritage Plan as a component of its first comprehensive plan. Resulting from the plan, the need to document historic architectural resources was identified with the goal to:

**Document the City’s cultural and historic resources in ways that are accurate, meaningful, comprehensive, and useful to the City and the general public.**

The Cultural Heritage Plan noted that the Historic Resources Inventory should be a “dynamic, comprehensive list of the City’s historic resources.” Further, according to the plan, the existing inventory of historic resources (over 13,500 parcels identified as being historic on some level) “needs to be field checked and continually updated as physical conditions change and additional resources are listed in the National Register of Historic Places or designated under the City’s Historic Preservation Ordinance” (Cultural Heritage Plan, 112).

To realize these goals, the City prepared policies with corresponding action items in the historic preservation plan. This current field survey is in partial fulfillment of those items, including:

### **PRESERVE POLICY 1.2 - Identify and Designate Additional Historic Structures, Districts, Sites, and Objects**

**PRESERVE 1.2-A:** Conduct a Citywide Reconnaissance Survey (cursory visual inspection).

Identify areas that are potentially eligible for new listings as City-Designated Historic Districts and NRHP Historic Districts. Focus on areas that:

- Have been previously identified as potentially eligible (see Cultural Heritage Plan Appendix B).
- Have a high percentage of structurally sound and architecturally significant pre-1940 buildings.

Identify individual structures and sites outside of City-designated and NRHP historic districts that are potentially eligible for individual nomination as a City-designated historic resource and/or for listing in the NRHP. Focus on structurally sound resources that:

- Would not otherwise be part of an eligible historic district.
- Are significant or unique for their architecture and/or engineering.
- Would severely and adversely impact the neighborhood's form, character, or economic growth potential if demolished or negatively altered. (Consider existing and former

schools, religious buildings, and civic or quasi-civic spaces such as libraries, parks, fire stations, community centers, etc.)

The current survey effort represents the City's second effort to identify previously unsurveyed historic resources within Sector 14's North Oakland, West Oakland, Central Oakland, and South Oakland neighborhoods, in partial fulfillment of the above-mentioned goal. (The first effort occurred in 1992-93, when the Pittsburgh Register of Historic Places survey was conducted.) In addition, the City intends to use this project to further develop and refine the methodology for conducting architectural surveys that was used in the first through ninth phases of the Pittsburgh Architectural Inventory (October 2014/February 2015/September 2016/October 2016/September 2017/September 2018/May 2019/October 2019).

## Methodology

### ***Background Research***

Prior to initiating fieldwork, the project team conducted background research and reviewed published literature to identify and obtain sources of information regarding the history and architecture of Oakland. A review of existing Pittsburgh history texts helped to predict the types of properties that should be expected in the survey area; historic mapping illustrated patterns of development and periods of growth in the neighborhood. Searches of CRGIS, the Pittsburgh Register of Historic Places—a city-wide survey conducted by the Historic Preservation staff of the Department of City Planning in 1991-1993—and the Allegheny County African American Historic Sites Survey resulted in a compilation of previously identified resources in Oakland.

### ***Reconnaissance Survey***

The survey team consisted of three architectural historians who spent approximately 18 days in the field with tablet computers. The tablets were pre-programmed with county property parcel maps and a fillable database of attribute fields developed by the project team to satisfy CRGIS database requirements (see Appendix A).

The project team conducted a windshield survey before beginning the building-by-building survey to develop a plan for data collection. Oakland is an exceptionally large and densely developed neighborhood, so survey consultants knew the number of hours allotted for field work would not be enough to survey every building. Therefore, the team had to be strategic in its efforts. The survey team decided to begin by checking and updating all previously surveyed resources. This effort alone covered much of Oakland's commercial and institutional built environment, as well as major residential areas. The team then directed its efforts to areas of Oakland with concentrations of older buildings, such as Meyran Street and the blocks historically known as "East Pittsburgh" on S. Craig, Henry, Winthrop, and Filmore streets, and to documenting historic developments with identifiable architectural character, such as Coltart Square, Edith Place, and Oakland Court.

An important function of the survey was to check and update previously identified resources. Having compiled these during preparation for field work, survey consultants notated previously identified resources in the fillable database using a number of newly created fields:

- **Previous Survey:** Surveyors used this field to enter the source(s) of previous identification/documentation of the resource, i.e. CRGIS, 1993 City Survey.
- **NR Status:** For extant resources listed in the NRHP or with official determinations of eligibility for listing from PA SHPO, "SHPO: Listed" or "SHPO" Eligible" were entered in this field. "SHPO: Not Eligible" was entered for resources previously determined by SHPO to be ineligible for the NRHP. For resources identified in a previous survey but without a determination of eligibility, "Unevaluated" was entered. In all of these cases,

the historians performing this survey conducted their own evaluation of these resources, since many SHPO determinations were made long ago. “Demolished or 100% destroyed” was entered for resources demolished since they were last recorded in a survey.

- NRL: “Yes” was entered in this field for resources previously individually listed in the NRHP.
- NRLD: “Yes” was entered in this field for resources previously designated as within the boundaries of a historic district listed in the NRHP.
- NRE: “Yes” was entered in this field for resources previously determined individually eligible for listing in the NRHP by PA SHPO.
- NRED: “Yes” was entered in this field for resources previously designated as contributing to historic districts determined eligible for listing in the NRHP by PA SHPO. “No” was entered for resources previously determined ineligible if this survey agreed.

The following other new fields were added to the database for this survey:

- Architect/Builder: The name(s) of a resource’s architect and/or builder were entered in this field, if known through research.
- Related: Surveyors entered address ranges in this field for attached rows of houses or groupings of detached houses that were all designed and built at the same time by a single entity or individual. Separate records were still completed for individual addresses in related groups of residences. However, commercial buildings with more than one storefront were recorded as one resource under the main address, and the full address (e.g. 4500-4506 Forbes Avenue) was entered in the “Address Discrepancy” field.
- Associated Resources: A key number was entered in this field for an individual resource that had its own key number in addition to belonging to a larger entity, such as a historic district with a collective key number. The collective key number was noted in the main “Key Number” field for these and all resources that were part of larger sites or districts. This field was also used to notate duplicate individual key numbers assigned to a resource.

Along with individual resources, surveyors had the ability to create a single site record including multiple resources by drawing a polygon around groups of contiguous parcels. This was most useful when recording a complex of related resources as a single site, such as a historic development plan or potential historic district. In the case of a site with multiple resources, surveyors used the “Related” “and Comments” fields to note address ranges and other features of those resources. Individual resource records were still completed in the field. In the case of multiple vacant lots, the ability to draw a polygon around several lots at once allowed surveyors to avoid tedious duplication of effort in recording every lot

singly in the field. However, in order to have an accurate count of vacant lots at the end of the survey, an individual record for each lot was added later in the office and the polygon boundary for the vacant lots was deleted.

Consistent with previous surveys, the survey team photographed all non-vacant parcels (i.e. those with buildings, structures, or landscape features such as parking lots or gardens), regardless of age or integrity, because it required minimal effort when the surveyor was entering data on the resource anyway; moreover, the photographs would enable project historians to review the condition and integrity assessments after the fieldwork was completed in order to assure consistency in integrity assessments among surveyors. Such additional photographic data provide an overall view of an area's integrity and the nature of intrusions in a potential historic district. In the future, this photographic documentation will provide a complete snapshot of a particular area and be a rich source of archival data to document change over time in Pittsburgh's neighborhoods.

Members of the survey team found it critical to establish consistency in the use of certain fields at the beginning of the survey. Use of the following fields is explained:

- **Potential Individual Eligibility:** Surveyors entered "Yes" for select properties discovered through background research to have been significant in the historical context of the community and for properties whose architecture and integrity stood out in the field, suggesting that further research on their history was warranted. "Yes" was also entered for resources that surveyors believed could be contributors to new, potentially eligible historic districts if the districts were recommended, but not defined, in the course of this project; for example, a number of apartment buildings in the Bellefield area of Oakland were marked as "Potentially Individually Eligible" that could also, conceivably, be grouped together in a Bellefield Apartments Historic District due to their shared context and geography. Previously surveyed resources were re-evaluated in the field and marked as "Yes" only if their architecture, integrity, and/or historical associations warranted. Surveyors did not fill in this field for contributing resources in NRHP-listed historic districts.
- **Potential District Eligibility:** The project team determined during its windshield survey that the survey area, as a whole, would not be suitable for historic district designation. Accordingly, the survey looked for smaller sections of the neighborhood or groups of related resources with sufficient integrity for historic district potential. Analysis of potential district boundaries was done after the field survey was completed and integrity maps of the surveyed areas had been generated. Therefore, the "Potential District Eligible" field was not used during the survey, but it was completed after potential historic districts were defined. This field was also used to update contributing and non-contributing resources in NRHP listed or eligible districts.
- **Integrity:** For this field, broad categories of "High," "Medium," and "Low" were utilized. Resources in the survey area were judged to have some integrity if, despite some alterations, their original character was discernible. A property that had replacement

siding but all original trim, windows, and doors intact might be given a rating of “High.” “Medium” was assigned to those that exhibited replacement siding and replacement windows and/or doors, but that retained their original size, scale, rhythm and proportion of openings, and possibly some original ornamentation. “Low” was used for properties with drastically altered facades, fenestration, massing, and/or materials, such that their original character had been obscured.

- Style: Correspondingly, where a resource’s original style was evident in its massing, extant detail (such as cornice or window design), and/or characteristic features (such as classical porch columns), that style was entered in this field. Resources with no remaining features of their original style were assigned a value of “No Style,” even if their context suggested a specific era of construction. “No Style” was also used for vernacular properties with no ornamentation or other stylistic gestures. “Mixed” was entered for transitional buildings that appeared to have had characteristics of more than one style when built. For buildings that exhibited an original style and a later one associated with additions or alterations, these styles were entered separately in the “Style” and “Secondary Style” fields. “Other” was used primarily for mid-twentieth century resources that were not described by any of the standard PHMC style categories, such as ranch houses, Cape Cods, and split levels.
- Vacant parcels and properties constructed post-1975 were noted with a “Yes” in those fields. Additional fields and photographs were not recorded for vacant properties. For post-1975 buildings, sites, and structures, photographs were taken, and the current function was recorded. Integrity was not rated for post-1975 resources. Parcels that were not occupied by a building or structure but that were in use (such as parking lots, parks, and gardens) were entered as “sites” and assigned a relevant function from the CRGIS-supplied drop-down list; such sites were also photographed.
- The “Historic Use” and “Current Use” fields allowed only one use to be selected. For mixed-use buildings, such as those with storefronts on ground floors and apartments or offices above, the first-floor use was entered.
- “Year Built” dates were generally entered in the field and were derived from observation of materials, method of construction, style, and context. In a few cases, the exact dates of major resources were known from research. For the rest, surveyors entered “C” for “circa” along with an estimated date. Historic maps, loaded onto surveyors’ tablets, were cross-referenced when possible. A secondary “Year Built” field enabled the surveyor to record the dates of additions or secondary buildings or structures such as garages; in some cases, the secondary date was used to indicate a range of years for construction.
- Several fields allowed surveyors to record addresses and other locational information that was different or missing from the pre-loaded county property information. The

“Address Discrepancy” field was used to record street addresses that differed from the addresses in the county database. “Location” was used to record the address, parcel, or descriptive location of resources added by the survey team in the field, for example, objects such as sculptures and structures such as segments of streets that retained historic paving. A “Skip” field allowed surveyors to note that a data point was redundant with another already completed for a property. For example, in an apartment building with more than one ground floor storefront, a county property address point might be present for each commercial address, but only one record usually needed to be completed for the building. In this case, surveyors would complete one record for the whole property, note the range of addresses in the “Address Discrepancy” field, then select “Yes” in the “Skip” field for each additional address.

- The “Comments” field was used by surveyors to record any additional features of note or unusual circumstances. Project historians also used the “Comments” field to note the presence of multiple buildings or structures on a single parcel, for example, a house and detached garage.

### ***Database Management***

Once the reconnaissance survey was complete, the City GIS department uploaded the results from the platform software to Microsoft Excel. Spreadsheet data were reviewed for accuracy and completeness. PHMC Key Numbers and Inventory ID numbers were manually entered for all non-vacant, pre-1976 surveyed resources (note: post-1975 resources and vacant parcels were assigned Key Numbers and Inventory ID numbers if they were located within the boundaries of existing or proposed NRHP districts). After the Excel file was complete, it was used to generate mapping (Appendix B) and tables (Appendix C). The Excel file was resubmitted for uploading into the City’s GIS system so that it would contain the most accurate and complete data from the survey. The GIS data concluded the deliverable for the City to incorporate into its Historic Resources Inventory.

PHMC required a slightly modified spreadsheet to update its CRGIS database. A copy of the City’s database spreadsheet was modified by removing irrelevant data fields, by reformatting column headings to use CRGIS naming conventions, and by adding primary (i.e. common) Inventory ID records for grouped resources that share a key number. Information included in the primary record for the resource group included such fields as an address range, architectural styles, and materials. The primary Inventory ID number consists of the CRGIS Key Number plus the suffix .0001, and related resources are numbered sequentially beginning with the suffix .0002. Thus, for a grouped resource with Key Number 123456, the primary record’s Inventory ID would be 123456.0001 and the first related resource’s Inventory ID would be 123456.0002.

## Historical Context/Background History

### Introduction

Oakland is a large, dense neighborhood containing a complex mixture of land uses located approximately three miles east of downtown Pittsburgh. Its boundaries are coterminous with those of City Planning Sector 14, Oakland. Its geography consists of a plateau defined by Panther and Junction hollows to the east, the banks of the Monongahela River to the south, and the steep sides of Herron Hill to the north and west. Two major limited-access transportation corridors—Bigelow Boulevard and the Penn-Lincoln Parkway, or I-376—skirt Oakland to its north and south, respectively, and Fifth Avenue, Forbes Avenue, Centre Avenue, and the Boulevard of the Allies run through the neighborhood on their routes east from downtown. Baum Boulevard, historically Pittsburgh’s “Automobile Row,” crosses North Oakland from its western terminus at Craig Street.

Oakland contains three City-designated historic districts: Oakland Civic Center, Schenley Farms, and Oakland Square. The first two of these, together, also compose a single large NRHP historic district. Nearby, large areas of the neighborhood and many individual resources have potential historic character that is unevaluated.

PreservePGH notes that Oakland’s “mix of modern and historic residential, commercial, educational, and civic buildings creates a distinctive and dynamic neighborhood character. Many historic buildings in sections of South and Central Oakland were altered for rental housing, which presents a challenge for preservation and structural maintenance. The opportunity for Oakland is to identify the right mix of high-quality preservation and new development to maintain its dynamic sense of place” (PreservePGH, 91).

### ***Early history: 1787-1868***

The area that is now Oakland was part of the original 5,766-acre “Manor of Pittsburgh” set aside by William Penn in 1769. In 1787, his descendant John Penn sold 270 acres that are now part of Schenley Park to Robert Neill, followed by the sale of 354 acres in what is now Oakland to Edward Smith in 1791.<sup>1</sup> General James O’Hara purchased 170 acres of Smith’s land in 1802 and later added Neill’s property to his holdings. At O’Hara’s death in 1819, his daughter Mary inherited these tracts of land. Mary’s and husband William Croghan’s daughter—also named Mary—was born in 1827 and, at 15, eloped to England with British Navy Captain Edward Schenley. Mary Schenley never returned to Pittsburgh, but upon inheriting her grandfather’s land holdings, managed them from abroad through her Pittsburgh agent, William A. Herron. Mary Schenley adhered to the English practice of leasing instead of selling or improving her property (Eversmeyer, 2). Much of it was used to graze dairy cattle, and thus the property came to be called Schenley Farms.

---

<sup>1</sup> A ca. 1790 log house associated with Robert Neill and his family has been restored and stands in Schenley Park. Technically in Squirrel Hill, it is individually designated as a City Historic Structure.

During the first half of the nineteenth century, Oakland was rural in character, with tracts of farmland and the country estates of a few wealthy families who relocated there to escape a downtown cholera outbreak in the 1830s. Custom has it that the name Oakland was derived from the name of one of these early landowners, publisher and postmaster William Eichbaum, whose surname means “oak tree” in German. Eichbaum purchased property in Oakland in 1840, and his estate house stood at Fifth Avenue and Darragh Street from 1847 to ca. 1928, when it was razed for the construction of Montefiore Hospital. Another early resident of Oakland was Neville Craig, editor of the *Pittsburgh Gazette* from 1829-1841, who had a farm, “Bellefield,” located just east of the Schenley holdings.

Oakland began to develop and urbanize following the Great Fire of 1845, which devastated much of downtown Pittsburgh. For residents looking to relocate, Oakland’s rolling hills and non-industrialized character made it a desirable place to settle. In 1850, glass manufacturer Edward Dithridge bought Neville Craig’s Bellefield and subdivided the property for residential development, calling it East Pittsburgh. Small houses filled up the eastern and southern section of Bellefield, and large Italianate houses—many by the Philadelphia architect Isaac Hobbs—were built along the streets to the west and north (Hobbs; Kidney 343). In 1859, industry arrived in Oakland with the Jones & Laughlin steel mill on the banks of the Monongahela River, giving rise to a demand for worker housing in South Oakland. Steps connected the mill on the riverbank with the houses on the bluff, some along routes still in use today.

Horsecars on steel tracks supplanted earlier omnibus service on Fifth Avenue in 1860, making Oakland more accessible to Pittsburgh and further encouraging its growth. Commercial and residential development advanced eastward along Fifth and Forbes avenues and spread south on cross streets as far as Dithridge and Craig streets. A number of houses clustered on the small grid of East Pittsburgh including Henry, Winthrop, and Filmore streets beginning in the early 1860s. Another spine of early development was Atwood Street from Fifth Avenue to Bates and Parkview. Oakland businesses and attractions marked on an 1862 map included Murdock’s Nursery at the southeast corner of Fifth Avenue and S. Bouquet Street, and a horse racing track south of Fifth Avenue between S. Bouquet Street and the present Bigelow Boulevard. Given the popularity of harness racing in the nineteenth century, this was likely a trotting park.

Initially a part of Pitt Township, Oakland was annexed to Pittsburgh in 1868.

### ***Speculative Development and the Beginnings of Urbanization: ca. 1870-ca. 1900***

The Civil War was a strong catalyst for growth in Pittsburgh, which continued apace through the rest of the nineteenth and into the twentieth century. By 1870, there were enough residents in Oakland to warrant the construction of a school. The 14<sup>th</sup> Ward Public School (later called the Oakland Public School and Bellefield Girls Vocational High School), designed by John U. Barr of Barr and Moser, was built at Fifth and Thackeray avenues on an acre of land purchased by the Oakland Sub-District from Mary and Captain Edward Schenley. The building was demolished after a fire in 1957. Its site is now the playing field of the former Henry Clay Frick Training School for Teachers (now Pittsburgh Science and Technology Academy), built in 1927 to the design of Ingham and Boyd.

Cable cars replaced the horsecars on Fifth Avenue in 1888, and the Pittsburgh Traction Company built a power station for the cable system on a large site fronting Fifth Avenue between Atwood Street and Oakland Avenue. When the line was converted for electric streetcars in 1896, such a large power facility was no longer needed. The two-story building served a variety of transportation-related functions including powerhouse, warehouse, and car barn until 1917, when the site was sold to the Duquesne Light Company. Another car barn, built by the Duquesne Traction Company on the west side of N. Craig Street near Fifth Avenue, was remodeled as a sports facility, Duquesne Gardens, in 1896, a year after fire destroyed the Schenley Park Casino. Both the Casino and the Gardens housed ice skating and hockey facilities, and the Gardens also accommodated roller skating, tennis, boxing, and even opera (Kidney, et. al., 78).

The improvement of public transportation to Oakland accelerated its development through the end of the nineteenth century. As the owners of Oakland's pre-Civil War farms and estates died, the sale of these lands by their heirs presented numerous opportunities for the creation of denser housing patterns through subdivision. For example, the sale of the Meyran estate in the 1870s led to the platting of Meyran Avenue, which was lined with houses by 1890. Southwest of Semple Street, McKee Place was laid out on the former McKee estate by about 1900.

Much of Oakland's residential development during the late nineteenth century consisted of speculative housing by wealthy investors from Pittsburgh's East End and as far away as Philadelphia. Coltart Square, a grouping of Queen Anne-style double houses on Coltart Avenue between Forbes Avenue and Louisa Street, was built on part of the former Joseph Coltart estate in 1887 by U.K. Beam for William Wood of Philadelphia.<sup>2</sup> In South Oakland, the adjacent estates of Thomas Fawcett and William E. Schmertz ("Elsinore") were platted and built up with single-family and double houses along Elsinore Square (now Joe Hammer Square), Kennett Square, and Ophelia and Lawn streets ca. 1900. Their developer, Hermon L. Dean, was from Philadelphia and also developed many rows of attached housing in that city. Among them, some rows in Philadelphia's Strawberry Mansion neighborhood exhibit similar massing, style, and details—including oriel windows—to those commissioned by Dean in South Oakland.

Dean was also affiliated with the United Real Estate and Construction Company, which was responsible for a grouping of substantial Colonial Revival apartment buildings—The Craft, The Elsinore, The Colonial, The Swearinger, The Kennett, and The Buckingham—built at around the same time on the south side of Craft Avenue. The largest of these, The Buckingham (later, The Saybrook), was partially demolished ca. 1960. The remainder of the building complex was demolished between 1980 and 1993 for Saybrook Court. Another, The Colonial, was an early work of architect Frederick G. Scheibler, Jr. Two smaller buildings that may have served as the leasing office and power plant for this apartment grouping still stand nearby.

One of the most prolific developers in South Oakland at the end of the nineteenth century was Eugene M. O'Neill, an immigrant from Ireland who resided in a mansion on Penn Avenue near Fifth Avenue. Eugene

---

<sup>2</sup> The ca. 1843, Federal-style Joseph Coltart house stood across Forbes Avenue from Coltart Street until the mid-twentieth century, when it was replaced by a fast food restaurant. It was documented by HABS in 1935. The site is now The Bridge on Forbes apartment building.

O'Neill found success as a lawyer and then as editor of the *Pittsburgh Dispatch* newspaper, which he took over from his brother Daniel O'Neill upon the latter's death in 1877. O'Neill also married his brother's widow, and thus inherited Daniel O'Neill's real estate holdings. This portfolio included substantial tracts in Oakland, which was then beginning to attract residents and businesses.

O'Neill's first real estate venture was to build 15 two-story-plus-mansard houses on the west side of the 3400 block of Ward Street between Zulema Street and Wilmot Street (now Boulevard of the Allies) in two phases in 1884-1885. Immediately to their west, O'Neill developed several rows of three-story attached houses on Wellsford and Wilmot streets between 1896 and 1901. Through his wife Emily, he developed a row of houses on Bates Street between the Boulevard of the Allies and Zulema Street in 1901. The same year, he developed a row of houses on Parkview Avenue near Collinson Place.

O'Neill's most ambitious undertaking was Oakland Square, built in four phases between 1889 and 1896. He partnered with Harriet Rook, widow of Alexander Rook and mother of Charles Rook—both business associates at the *Pittsburgh Dispatch*—to develop Oakland Square on part of a large parcel known as Linden Grove. The first phase features a gracious oval of public open space and is thought to have been patterned on the squares of Dublin in O'Neill's home country of Ireland and on the Victorian-era residential developments of London. Oakland Square offered elegant and commodious houses in the fashionable Queen Anne style and in an attractive location close to public transit and overlooking the new Schenley Park. The success of the first 26 houses prompted O'Neill's subsequent development of North Oakland Square and South Oakland Square on Parkview Avenue and Dawson Street.

At the turn of the twentieth century, O'Neill began moving away from the development of single-family dwellings to focus on the construction of large apartment blocks. He built his first apartment building, The Linden Apartments, in 1903 on Bates Street. The adjacent Andover and Rosemont apartment buildings followed. The Oakland Square Apartments at 3728 and 3732 Dawson Street were built to complement O'Neill's earlier Oakland Square housing development in 1905. Only 3728 Dawson Street still stands today; a parking lot is located on the site of 3732 Dawson Street.

O'Neill frequently employed Charles H. Chance as his builder, including for Oakland Square. The work of Charles Chance can be seen in houses and row houses built throughout Oakland during the period between about 1889 and 1904, and Chance also emerged as a speculative developer. The Rook and Chance Plan is a T-shaped grouping of rowhouses built on Juliet Street and Virgilia Place ca. 1895. In 1904, Chance stated that he had built over 250 houses in Oakland, most of them for O'Neill. By about 1920, Chance was wealthy enough to own the stately Italianate Henry Johns mansion (now the John Elachko Funeral Home, with additions) at the corner of Semple and Dawson streets.

### ***Schenley Park, Schenley Farms, and the Oakland Civic Center: 1889-1937***

As Bellefield, Central Oakland, and South Oakland urbanized in the decades following the Civil War, the vast undeveloped land holdings of Mary Croghan Schenley lay between them until almost the turn of the

twentieth century. Its eventual development between 1889 and the 1930s was another great catalyst for Oakland's ascent.

Mary Schenley finally began to sell parts of her property in the late 1880s, at the urging of her Pittsburgh agent, William Anderson Herron. In 1889, Edward Manning Bigelow, Pittsburgh's Director of Public Works, who was pursuing a vision of a public parks system for Pittsburgh, persuaded Mrs. Schenley to donate 300 acres to the City, with the option to purchase another 100 acres, which soon followed. Bigelow immediately began to shape this land into Schenley Park. Another project that had major influences on Oakland's development was Grant Boulevard, planned by Bigelow as an express route from downtown Pittsburgh to access Schenley Park along the north side of Herron Hill. Grant Boulevard was opened as far as Centre Avenue by 1900 and renamed after Bigelow in 1916.

Schenley Park attracted the notice of Andrew Carnegie, who offered his own donation: one million dollars for the construction of a library, museum, and music hall on twenty acres of park land near Schenley Park's entrance. In fact, this was the second time Carnegie had extended this offer; this time, the City accepted and held a design competition for the proposed cultural complex. Alden and Harlow received the commission, and construction on the Carnegie Institute began in 1892. It opened in 1895. Carnegie soon decided to enlarge the complex and add natural history and art museums. This expansion, from 1903-1907, quadrupled the Carnegie Institute's size and revised its architectural style from Romanesque to Renaissance Revival.

As improved transportation and the presence of the park and cultural institutions drew more residents eastward into Oakland, religious, social, and educational institutions followed them. Two years after donating the land for Schenley Park, Mary Schenley gave five acres of her land to the newly established Western Pennsylvania School for Blind Children. The school, by George S. Orth, at Bayard Street and Bellefield Avenue opened in 1894.

Bellefield Presbyterian Church, already established in the area, built a new stone church designed by Frederick Osterling in 1889; First United Presbyterian Church moved from its original home downtown into a new building by Thomas Boyd in Oakland in 1898; the Roman Catholic Diocese of Pittsburgh began construction of a new St. Paul's Cathedral to the design of Chicago architects Egan and Prindeville in 1903; and the First Congregational Church by Thomas Hannah (now St. Nicholas Greek Orthodox Church) was completed in 1904.

Businessman Franklin F. Nicola (1860-1938), a wealthy Cleveland businessman, arrived in Pittsburgh in the mid-1890s and developed a new vision for the remaining undeveloped Schenley property at the heart of Oakland between N. Bouquet Street and N. Bellefield, Centre, and Fifth avenues: a new civic center for Pittsburgh, removed from the crowds, pollution, floods, and industry of downtown, and adjacent to an elegant residential neighborhood for the city's social elite. With the backing of investors including Andrew Carnegie, Henry Clay Frick, Andrew Mellon, George Westinghouse, and H.J. Heinz, Nicola purchased three acres of cornfield between Fifth and Forbes Avenues from Mary Schenley in 1897 and constructed the Bellefield Hotel, soon renamed the Hotel Schenley. The hotel's location and glamour made it the center

of social life for Pittsburgh's political and industrial leaders and further burnished Oakland's new image as a desirable address.

Mary Schenley died in 1903. Nicola formed a development company, the Schenley Farms Company, to buy her remaining property from the trustees of her will and to develop the land according to his vision. A wide, tree-lined extension of Grant Boulevard was laid out through the center of the property to connect to the entrance to Schenley Park, and along it, areas were planned for residential, educational, and civic/social/institutional uses. Nicola promoted Schenley Farms as a premier location and spent \$1.5 million on streets, utilities, and landscaping to make it attractive.

Although no formal planning document guided the development of Nicola's Schenley Farms, the creation of a monumental civic center was an expression of the City Beautiful movement. Inspired by the World's Columbian Exposition of 1893 in Chicago, a harmonious grouping of Classical Revival buildings on the shores of Lake Michigan, coordinated by architect Daniel Burnham and dubbed the "White City," the City Beautiful movement held that monumental, orderly arrangements of civic architecture and public open space would ennoble the city and its residents. Especially in cities like Pittsburgh, which had been degraded by industry and experienced haphazard development of infrastructure and neighborhoods, the City Beautiful represented a corrective to an urban environment seen as lacking in beauty, dignity, art, and culture.

Nicola began the residential portion of his Schenley Farms development in 1906 by commissioning noted local architects (including Bilquist and Lee, H.D. Gilchrist, Janssen and Abbott, and Rutan and Russell) to design eleven model houses along the west side of Lytton Street to demonstrate the quality of the neighborhood he planned. He imposed building restrictions, such as minimum setbacks and lot sizes, and required that electrical and telephone wires be buried underground, an innovation at the time. Most of the neighborhood's substantial houses—96 on a level with the rest of the Schenley Farms development, and another 39 on a terrace above—were constructed over the next decade and a half in the revival styles popular in the early twentieth century, including Colonial Revival, Tudor Revival, Spanish Revival, Georgian Revival, and Renaissance Revival. The contemporaneous Craftsman Style is also represented. An elaborate, highly ornamented parking garage designed by the W.G. Wilkins Company in 1912 to serve the development was never built (Kidney, et. al., 86).

In pursuit of his civic center, Nicola "either lured institutions to build in Oakland... or he invented them. The result, an inspired partnership with [Columbia University- and École des Beaux-Arts-trained] architect Henry Hornbostel, was block after block of one of the more harmonious City Beautiful environments in the nation" (Donnelly, 61). In 1905, the University Club became the first institution to announce it would build in Schenley Farms, on Bigelow Boulevard north of Fifth Avenue (the club's original building, located between the Pittsburgh Athletic Club and the Syria Mosque site, was demolished in 1923 and replaced with the current University Club on University Place). The same year, Nicola persuaded the Allegheny County Commissioners to purchase a lot at Bigelow Boulevard and O'Hara Street for the construction of its planned Civil War veterans' memorial hall. Soldiers and Sailors Memorial Hall was designed by Henry Hornbostel in 1907 and dedicated in 1910.

In 1908, the Western University of Pennsylvania announced that it would change its name to the University of Pittsburgh and move from the North Side to Oakland. It purchased 43 acres north of O'Hara Street to begin building its new campus, originally designed by Hornbostel as an Acropolis-like scheme of Classical Revival buildings ascending the eastern flank of Herron Hill. Along with the Carnegie Technical Schools across Junction Hollow, founded in 1903 by Andrew Carnegie to train students in skills to support Pittsburgh's industries—also with a campus designed by Hornbostel—the University of Pittsburgh's relocation established Oakland as a major educational center. This development would have profound influence in shaping Oakland's growth and development over the ensuing century and more.

These major institutions paved the way for many others to follow them to Nicola's Schenley Farms: the First Baptist Church (Bertram Grosvenor Goodhue, 1909), Forbes Field (1909), University of Pittsburgh Medical School (Henry Hornbostel, 1910), Twentieth Century Club (George H. Schwan, 1910; enlarged by Janssen and Cocken, 1930), Pittsburgh Athletic Association (Janssen and Abbott, 1911), Logan Armory (opened at O'Hara and Thackeray streets to house the Eighteenth Regiment of the Pennsylvania National Guard, W.G. Wilkins Company, 1911; demolished 1953), Central Turnverein (a German social and gymnastics club, Kiehnel and Elliott, 1912), Historical Society of Western Pennsylvania (Ingham and Boyd, 1912), Masonic Temple (Janssen and Abbott, 1914), Concordia Club (Charles Bickel, 1914), Syria Mosque (Huehl, Schmid, and Holmes, 1915; demolished 1991), and Schenley High School (Edward Stotz, 1916). The Pittsburgh Athletic Association and Masonic Temple replaced Casey's Row, a short-lived block of substantial, elegant houses built by William Casey, a respected carpenter and contractor, ca. 1891 (Ham, 82).

Where the Carnegie Institute adjoined Schenley Park was a ravine, St. Pierre's Ravine. "[T]hough picturesque and crossed by a handsome stone bridge," this did not have the formal character city planners desired for the entrance to Schenley Park (Kidney, et. al., 50). Beginning in about 1913, the City used public works fill to fill in the ravine, burying the Bellefield Bridge and creating Schenley Plaza as a formal entrance to Schenley Park. The Mary Schenley fountain, formally titled "A Song in Nature," by New York sculptor Victor David Brenner, was placed over the bridge's location in 1918. Schenley Plaza's original design, by Philadelphia architects Sellers and Register, was gradually devoured by parking as the twentieth century progressed. The current design dates to 2005.

World War I and the economic recession that followed caused a hiatus in the development of the Schenley Farms district until 1922 (Eversmeyer, 6). In that year, Nicola's Bellefield Company began construction of the Schenley Apartments (Henry Hornbostel with Rutan, Russel & Wood, 1923), a grouping of five high-rise, luxury apartment buildings with storefronts on both Fifth and Forbes avenues. The opening of the Ruskin Apartments (Louis Stevens, 1923) and Webster Hall (Henry Hornbostel with Eric Fisher Wood, 1926) followed. Other buildings added to the Oakland Civic Center in the 1920s included the University Club on University Place (Henry Hornbostel, 1923; built after the club sold its original building behind the Pittsburgh Athletic Association to the PAA), Young Men's and Women's Hebrew Association (Janssen and Cocken, 1924), and the Board of Public Education (Ingham and Boyd, 1927). Commercial office uses came to Schenley Farms with the construction of the National Union Fire Insurance Company (Abram Garfield, 1923; a second wing was built in 1930) and the Physicians' Building (Edward B. Lee, 1925; demolished 2011 for Nordenberg Hall) on University Place.

The last monumental Classical Revival building to be added to the Oakland Civic Center was the Mellon Institute for Industrial Research (Janssen and Cocken, 1931-1937). The Institute built this building upon outgrowing its original home in what is now Allen Hall on O'Hara Street. The Lloyd House, an Italianate estate house on the property at Fifth and Bellefield avenues, was moved across the street to serve as temporary offices and laboratories during construction and was demolished in 1937 when the new Mellon Institute opened (Eversmeyer, 7).

In the 1920s, the University of Pittsburgh abandoned Hornbostel's Acropolis Plan to project a new kind of image for the university. In 1921, Chancellor John G. Bowman persuaded Andrew and Richard Mellon to purchase the 13-acre tract known as Frick Acres, bounded by Bigelow Boulevard and Fifth, Forbes, and Bellefield avenues, and to donate it to the university. On this tract at the heart of Schenley Farms stood four large houses, built ca. 1860 to ca. 1890, one of which had been converted to a school in the early 1900s. Otherwise, Frick Acres had remained undeveloped. Inspired by Bertram Grosvenor Goodhue's Nebraska State Capitol building in Lincoln, Bowman commissioned Philadelphia architect Charles Klauder to design a 52-story (later scaled back to 40) tower and two companion buildings, the Stephen Foster Memorial and Heinz Chapel. These were dedicated in 1937. Their Late Gothic Revival Style architecture differs from the main of Oakland Civic Center, but in their materials, in their formal monumentality, and in their arrangement in open space, these buildings are compatible with Oakland Civic Center's unified City Beautiful design intent.

### ***The Flannery Brothers, the Iroquois, and the Bellefield Apartment District (1901-1973)***

Concurrently with the development of Schenley Farms, the nearby Bellefield area of Oakland became established as a premier district for apartment living. Apartment buildings had only recently gained acceptance, and then cachet, as a form of urban housing for the middle and upper classes.

Though not in Bellefield, the tone may have been set by the Iroquois Apartments. The Iroquois was the first of several Oakland buildings developed by brothers James J. and Joseph M. Flannery. The Flannery brothers made their wealth by investing in vanadium, an element that strengthened steel, and later in radium. They went on to launch several business ventures, including the Oakland Savings and Trust Bank and the Standard Chemical Company, the first commercial radium producer in the U.S. The company had its laboratories in the Parkvale Building, formerly known as the Vanadium Building, at Forbes and Meyran avenues, which the Flannery brothers had built in 1911 to the design of Frederick Osterling.

Ten years earlier, the Flannery brothers had invested in the idea that well-to-do residents of Oakland could be enticed to live in luxury flats (so-called to distinguish them from tenement apartments). The Iroquois (1901), also designed by Osterling, occupied an entire block facing Forbes Avenue and offered its well-to-do residents elegant suites served by an elevator. It was the first "real apartment house" to be built in Pittsburgh (Pittsburgh *Index*, 1902, in Ham, 25), and its success inspired a spate of other upscale apartment buildings in Oakland's nearby Bellefield district.

Bellefield Dwellings, designed by Carlton Strong and built in 1902-1904, was Oakland's next swank apartment house and first high-rise residential building. For the next 70 years, Bellefield would fill with apartment buildings of all sizes and styles, with its most distinctive being the luxury apartment houses of the pre-World-War-II period: the King Edward (1914, 1930), D'Arlington (Edward Kern, 1908-1910), Bayard Manor (ca. 1925), The Fairfax (Philip Julien, 1925), The Adrian and The Aberdeen (both 1927), Hampton Hall (H.G. Hodgkins, 1928), Dithridge Apartments (1929, with 1959 addition by Nathan Cantor), and The Royal York (Frederick Stanton, 1937). Melwood Avenue between Forbes and Centre built up with more modest apartment houses between 1925 and 1945.

Post-WWII, the construction of apartment houses in Bellefield continued, but most were smaller and more architecturally modest. Exceptions from this period include the International Style Neville House (Tasso Katselas, 1959) and the green glazed tile-clad Winchester (1972). Two very large apartment complexes, though of unremarkable design, were also built on N. Craig Street near Fifth Avenue in the 1950s. Park Place Apartments was built on the site of the Duquesne Gardens sports facility, which was demolished in 1956, and University Square Apartments replaced a pair of post-Civil War estate houses, one of which housed a sanitarium in the early 1900s.

### ***More Speculative Housing and Other Development, ca. 1900-1930***

As Oakland developed from remote suburb to a center of culture, education, medicine, and social life in the first half of the twentieth century, its early large estates continued to be sold off and subdivided for housing. Usually, the estate house was demolished; however, a few of Oakland's large old houses remain, most in heavily remodeled condition, among the neighborhood's later streetscapes. Some examples include the Henry Johns, Joseph Laughrey, and two Wilmot houses on Dawson Street and another house owned by Joseph Laughrey on Atwood Street.

The childhood home of architect Frederick Scheibler, Jr., (Charles H. Bartberger, architect, 1889) still stands on the west side of Dawson Street, where it was moved slightly northward from its original location to make room for Edith Place to be laid out ca. 1905. The associated stable that was one of the younger Scheibler's first commissions has been demolished.

South Oakland became populous enough to be served by its own public school in 1893. The Oakland School, later renamed Holmes School, was located between Ward and Dawson streets, just south of Edith Place. It was designed by Ulysses J.L. Peoples and expanded in 1899 and 1907. Lacking specialized educational spaces, the school closed in 1986. The building was subsequently demolished, and the site was redeveloped with housing, but the school's original date stone has been preserved on the site.

The houses of Chesterfield Road were constructed on the former estate of glass merchant George Breed, who owned property from Fifth Avenue to Terrace Street and built a large mansion near Fifth Avenue in about 1842. His daughter, Sarah Breed Zug, lived there her entire life, including after her marriage to Charles Henry Zug, an iron and steel manufacturer. After Sarah Zug's death in 1920, her daughter sold the estate to the Home Finance and Construction Company, which razed the mansion, platted Chesterfield

Road, and built 96 Tudor Revival Style houses. A few of the houses nearest to Fifth Avenue have been demolished for access to adjacent Montefiore Hospital.

Directly to the west was the 13-acre campus of the Ursuline Young Ladies Academy. Atop the hill stood the academy's building, large and adorned with multiple spires, steeples, and turrets. In 1894, the Sisters of Mercy purchased the property and founded the Academy of Our Lady of Mercy, a K-12 school. The sisters constructed a convent behind the old academy building (Edward Stotz, architect, 1907) and opened Mount Mercy College in 1929. The original Ursuline building was demolished after a fire in October 1923; it was replaced with more modern buildings and a college green (*Pittsburgh Gazette Times*, 25 Oct. 1923:1, 9). Mount Mercy was renamed Carlow College in 1969 and became Carlow University in 2004.

At Fifth Avenue and Robinson Street, the St. Agnes Roman Catholic Church complex was constructed between 1911 and 1922. St. Agnes was an Irish parish that moved uphill from an earlier location in Soho, purchasing the Fifth and Robinson property in 1905. The parish school, which faces Robinson Street, was built first. The church, by architect John T. Comes, and with extraordinary cast concrete ornamentation by Frank Aretz and stained-glass windows by George W. Sotter, followed in 1915-1918. The rectory (possibly by the firm of Comes, Perry, and McMullen, or by Edward Stotz) completed the complex in 1922.

A Polish Catholic church, St. Hyacinth, was organized in 1916 and built a building on Ophelia Street to house the church, rectory, convent, and school the next year. St. Agnes and St. Hyacinth both closed in 1993, along with St. Regis, an Italian congregation whose 1953 building stands on Parkview Avenue. The St. Agnes property was acquired by Carlow University and is currently threatened with demolition. St. Hyacinth was converted to residential use and is now Hyacinth Place Apartments. St. Regis continues to serve as a worship site for St. Paul Cathedral Parish, to which the members of all three Catholic parishes were assigned when their individual parishes were suppressed.

Near Eugene M. O'Neill's early rows around Bates and Zulema streets, a pair of Oakland brothers developed a notable grouping of commercial buildings, rowhouses, and apartment buildings beginning in 1908. James and Edward Hardie were brothers and business partners of William Hardie, who founded the Hardie Brothers Confectionary Company in 1900. The company, known for its Highland Candies, had a large manufacturing facility at 1601 Liberty Avenue in the Strip District, while the brothers themselves lived on Ward Street, Bates Street, and McKee Place, in Oakland (except for William, who resided in Wilkinsburg; James Hardie later lived at 1094 Devon Road in Squirrel Hill, near Carnegie Mellon University). In around 1900, James and Edward Hardie developed the block face of Ward Street between Semple Street and McKee Place with a yellow-brick row; in 1908, they followed with a yellow-brick ensemble on Bates Street and adjacent stretches of Semple and McKee including commercial storefronts on the corners and residential rows in between. The development included a short row of three houses on an alley, St. James Place, only wide enough for pedestrians, and four apartment buildings: the Kilkenny and the Argil facing McKee Place and the Hardie and the Tobermory facing Zulema Street. Their development also incorporated reliefs of a family motto, "Tout Hardi," a French phrase ("quite bold") associated with the family crest of the Scottish McHardie clan, into the commercial buildings anchoring the corners of Bates Street and McKee Place and Semple Street, respectively.

Just south of the Oakland School site, Oakland Court and Dawson Court were both constructed in the 1920s. The Beverly Land Company purchased the portion of the site nearer to Ward Street in 1924 and built 17 attached bungalow-style houses facing a central green. Adjacent, through to Dawson Street, Dawson Court was constructed with a similar plan in 1926.

In the mid-twentieth century, Oakland was home to significant populations of Italians, Jews, Syrians, Poles, and African Americans. The presence of some of Oakland's immigrant groups is represented by buildings such as the Croatian Fraternal Union (3441 Forbes Avenue, Pierre Liesch, architect, 1928), Serb National Federation (3414 Fifth Avenue, 1925), and St. Lorenzo di Gambale Mutual Benefit Association (379 S. Bouquet Street, 1938). A Lithuanian Literary Society, present on Orr Street by 1916, later sold its building to the Sahara Temple, a Masonic organization. It was noted as a potentially significant individual building in the City of Pittsburgh's 1993 survey but was destroyed by fire in 2005. Oakland had a synagogue, Tree of Life, at 222 Craft Avenue between 1907 and ca. 1950 (Daniel A. Crone, architect). In the 1950s, the congregation moved east to Squirrel Hill and the Craft Avenue building was converted to a theater, the Pittsburgh Playhouse. It was demolished in 2019.

### ***Oakland's Hospitals and the University of Pittsburgh Medical Center: 1890-1952***

In the first half of the twentieth century, Pittsburgh's hospitals also made homes in Oakland, where large tracts of land were available and the air was relatively clean. At the same time, the University of Pittsburgh was planning to create a university medical center, and it formed a coalition of many of these medical institutions as they grew and expanded. By the end of the 1930s, the University Medical Center included Children's Hospital, Magee Women's Hospital, Presbyterian Hospital, Eye and Ear, and the Falk Clinic. Montefiore Hospital was the last to join in 1952.

Children's Hospital first opened in 1890 in South Oakland in a Second Empire-style villa on four acres between Forbes Avenue, Ophelia Street, Hamlet Street, and McDevitt Street. This had grown to a complex of six buildings by 1923, when the hospital was destroyed by fire with no loss of life. Instead of rebuilding on its old site—which would soon be cross-cut by the Boulevard of the Allies—the hospital selected the H.K. Porter estate on DeSoto Street as its new site. The cornerstone for the building, designed by New York hospital specialists York and Sawyer in collaboration with local architect Edward Purcell Mellon, was laid in 1925. The new hospital opened in 1926, and Children's became the first teaching hospital of the University of Pittsburgh's campus medical center. The hospital expanded in 1950, 1957, and 1986. Children's merged with the University of Pittsburgh Medical Center (UPMC) and built a new hospital in Lawrenceville in 2009. The Oakland Children's Hospital facility was demolished except for the 1986 "Main Tower."

Magee Women's Hospital was originally named Elizabeth Steele Magee Hospital after the wife of political boss and state senator Christopher Lyman Magee. This hospital began operation in the Magee mansion, "The Maples," at Forbes Avenue and Halket Street in 1911, and built its first dedicated hospital building on this property, designed by Thomas Bilquist, in 1914. Magee Hospital was leased to the U.S. Army to

care for soldiers during World War I and closed in 1918 during the influenza epidemic. It reopened to the public in 1920 and was enlarged several times, most recently in 2011.

Presbyterian Hospital was founded on the North Side (Allegheny City) in 1893 and incorporated in 1895. In the late 1920s, the University of Pittsburgh persuaded Presbyterian to move to Oakland by offering a tract of land for the construction of a new hospital. Construction began in 1930, and the new Presbyterian Hospital opened in 1938. The hospital changed its name to Presbyterian University Hospital in 1961, reflecting its close ties with the University of Pittsburgh. It is currently the flagship facility of the UPMC affiliation of health care facilities.

The Eye and Ear Foundation began as an outpatient dispensary downtown in 1895. The hospital relocated twice before moving to its current location on Lothrop Street in 1943. It has changed its focus from treatment to fundraising and now known as the Eye and Ear Foundation.

Montefiore Hospital was founded by the Hebrew Ladies Hospital Aid Society and opened in 1908 in the Jacob Ewart mansion on Centre Avenue in the Hill District. With roots in the Jewish community, it provided services on a nonsectarian basis. The hospital purchased the former Eichbaum property (by then a training school for kindergarten teachers) at Fifth Avenue and Darragh Street in Oakland in 1927 and constructed a new building there by 1929. The architect was the Chicago firm of Schmidt, Garden, and Erikson, with local collaboration from Henry Hornbostel. In 1952, Montefiore became affiliated with the University of Pittsburgh School of Medicine, and in 1969, it joined Children's, Presbyterian, Eye and Ear, and Magee hospitals, and Western Psychiatric Institute and Clinic in the University Health Center of Pittsburgh, the forerunner of UPMC.

The Falk Clinic was founded as a medical and surgical outpatient dispensary in 1928 by Maurice and Leon Falk with a gift of \$900,000 from the University of Pittsburgh. It built its building at Fifth Avenue and Lothrop Street, designed by Edward Purcell Mellon, in 1930-1931. The building received a large addition that filled in its front courtyard in the 1990s.

The Municipal Hospital was built in 1940 to the design of Richard Irving and Theodore Eicholz to serve as a facility for patients with contagious diseases. It was the location of Jonas Salk's research for the polio vaccine and is now known as Salk Hall.

The Western State Psychiatric Hospital (Raymond Marlier, 1939-1940) opened in 1942 in response to the mental health issues suffered by soldiers returning from World War II. In 1945, it was renamed the Western Psychiatric Institute and Clinic.

The concentration of Pittsburgh's medical institutions in Oakland led to nearby buildings being dedicated to medical office space, many with pharmacies on their ground floors. The Physicians Building at 121 University Place (Edward B. Lee, 1924; demolished 2011) was built by the Physicians Land Company to house the offices of physicians associated with the university's medical school and medical center. The Medical Arts Building, designed in the Art Deco Style by Maximilian Nirdlinger, was constructed on the site of the former streetcar powerhouse and car barn at Fifth Avenue and Atwood Street in 1932. From

the 1940s through the 1960s, medical offices supplanted residential units in the upper floors of the Iroquois apartment building (Ham, 26).

### ***The Automobile Era: Baum Boulevard, the Boulevard of the Allies, and the Parkway, ca. 1900-1956***

Between 1890 and 1910, before Detroit established dominance in the auto industry, Pittsburgh was a regional center for automobile manufacturing, especially of small, independent car makers. The city's easy access to raw materials, coal, railways, and trained workers, as well as its affluent consumer base, made it an ideal location for the automotive industry to thrive (Murphy and Hembree, 12). Car companies, factories, dealerships, and service garages began to cluster around neighborhoods—such as Pittsburgh's East End—where well-to-do early adopters of the automobile lived. Already established as an area that served the horse and carriage trade, the Baum Boulevard-Centre Avenue corridor easily transitioned to the motorcar trade, with stables and livery shops adapted to auto garages and service shops. Other buildings were newly built as automobile factories, stylish sales showrooms, and related businesses such as tire companies. Baum Boulevard, in particular, emerged as Pittsburgh's "Automobile Row," a term coined in 1919. From Oakland to East Liberty, Baum Boulevard—as well as parallel Centre Avenue and the adjacent block of North Craig Street—was lined with motor car manufacturers, dealers, garages, and related industries.

Pittsburgh's Automobile Row petered out in the 1920s and 30s due to lack of interest from local investors and successful competition from auto manufacturers in other cities, particularly Detroit. Baum-Centre evolved into an automobile-oriented commercial corridor with several buildings still extant from Pittsburgh's early participation in the automobile industry, especially around the northern end of Baum Boulevard and N. Craig Street. This intersection was briefly the site of an amusement park, Luna Park, from 1905-1910. Upon the park's closure, the Atlantic Land Company sold the property in lots to commercial establishments, and Melwood Avenue was laid out across the site. By 1923, at least 15 auto-related businesses occupied the Luna Park site.

As motorcars became more affordable and increasingly popular, they created gridlock on city streets, which had been created for horse-drawn vehicles. Major thoroughfares also carried public transportation systems, which created congestion for automobiles. City officials studied remedies for this problem, and ultimately favored the idea of a "Monongahela Boulevard" to expedite the movement of vehicular traffic eastward from downtown. Plans were put on hold during World War I, then resurrected as the "Boulevard of the Allies" after armistice. The Boulevard of the Allies is significant as Pittsburgh's "first major purpose-built infrastructure project that explicitly addressed the early-twentieth-century quagmire surrounding the automobile, automobile traffic, urban congestion, and American automobile culture" (Michael Baker International, Inc., "Boulevard of the Allies" 111).

Pittsburgh voters approved a bond referendum to fund the boulevard in 1919, and design work began the next year. Construction of the boulevard proceeded in phases, beginning downtown in 1921 and extending to Oakland in 1927. Two viaducts—one over Brady Street and Forbes Avenue, the other near the terminus of Ophelia Street—were constructed, and Wilmot Street was widened to become a four-

lane artery through South Oakland. This extension, completed in 1930, overtaxed the 1907 Wilmot Street Bridge over Junction Hollow, which connected South Oakland to Schenley Park. In 1939-1940, the Wilmot Street Bridge was replaced with a new, Wichert truss bridge and the 1907 bridge was demolished. The new bridge was named after Charles Anderson, a recently deceased Pittsburgh City Councilman and labor organizer. Along with the new bridge, the bridle paths of Schenley Park were widened to accommodate vehicular traffic through the park, and the Schenley Park interchange and grade separation were constructed to join the Boulevard of the Allies with Panther Hollow Road and, by extension, Bigelow Boulevard, completing a vehicular transportation circuit between downtown and Schenley Park (Michael Baker International, Inc., "Boulevard of the Allies" 100-110).

While the Boulevard of the Allies was under construction, planning was underway for another high-speed route between downtown and points east: the Penn-Lincoln Parkway. Serious discussions began in 1921 about this highway as a means to relieve congestion on the William Penn (U.S. 22) and Lincoln (U.S. 30) highways. Robert Moses endorsed the idea in his 1939 traffic plan for Pittsburgh, but World War II delayed construction until 1946. By this time, a federal expressway policy was in place, along with federal and state aid for cities to plan and build them. The first seven miles of the Parkway—from Churchill to Bates Street, dubbed the Parkway East—opened in 1953. The next section of the Parkway East opened from Bates Street to the Boulevard of the Allies in 1956.

Although the alignment was planned to minimize property damage by going through less-developed areas, it altered the historic geography of South Oakland. Construction of the Parkway East caused loss of homes through direct condemnation or through the weakening and erosion of hillsides that were cut for the road, leaving steep slopes prone to landslides. Lawn Street lost 40 houses and a ball field. Other streets, such as Ethel and Maurice streets, disappeared entirely. Hardest hit was the community at the foot of Junction Hollow, known as Russian Valley, Saline Valley, or Four Mile Run, where hundreds of homes were taken. The evisceration of the community's population caused businesses to close and two churches—St. Joachim's Roman Catholic Church and St. John Chrysostom Byzantine Catholic Church, where Andy Warhol was baptized—to lose most of their congregations (Ham, 33-34).

One community response to the parkway was the creation in 1956 of the Shrine of the Blessed Mother, also known as the Our Lady of the Parkway, on a cliffside site at the end of Wakefield Street overlooking the Parkway East. Among the various accounts of its origin, attribution has been given to a longtime resident of Wakefield Street whose home was demolished for the Parkway's construction. The shrine has also been viewed as a cultural response to the proliferation of automobiles, expressways, and resulting traffic accidents and deaths (Preservation Pittsburgh, 11).

---

***Previously Identified Resources***

Eight (8) resources in the Oakland survey area are individually listed in the NRHP. Two (2) NRHP-listed historic districts are partly located within the survey area: the Schenley Farms Historic District, was listed in 1983 and the Schenley Park Historic District was listed in 1985. Other individual NRHP-listed properties include:

- Carnegie Institute and Library (included in Schenley Farms Historic District)
- Cathedral of Learning (included in Schenley Farms Historic District)
- Heinz Memorial Chapel (included in Schenley Farms Historic District)
- Henry Clay Frick Training School for Teachers
- Pittsburgh Athletic Association (included in Schenley Farms Historic District)
- Schenley High School (included in Schenley Farms Historic District)
- Soldiers and Sailors Memorial Hall and Museum (included in Schenley Farms Historic District)
- Steven C. Foster Memorial (included in Schenley Farms Historic District)

A ninth NRHP-listed property, the Oakland Public School on Dawson Street near Edith Place, has since been demolished.

There are three City-designated historic districts in Oakland: Oakland Civic Center, Schenley Farms, and Oakland Square. The Gallagher-Kieffer House (234 N. Dithridge St.) and Herron Hill Pumping Station (4501 Centre Avenue) are designated as City Historic Structures.

See Appendix C, Table 3 for a complete list of previously identified resources in Oakland. See Appendix C, Table 5 for a list of properties in Oakland in the Schenley Farms Historic District. See Appendix C, Table 6 for a list of properties in Oakland in the Schenley Park Historic District.

## Results

### *Summary of Findings*

Oakland is an exceptionally dense and diverse neighborhood with many categories of the built environment that are central to Pittsburgh's urban identity and function: institutional, educational, medical, religious, domestic, transportation, and recreation. The survey team was unable to perform a comprehensive survey of Oakland due to the constraints of time and financial resources. Therefore, this project endeavored to document the oldest, most significant, most typical, and most unique resources, as well as to survey resources throughout Oakland's geographical range.

This survey documented a total of 2,003 resources in Oakland's four neighborhoods. Of these, only a little more than half—1,071 or 53.4%—were newly surveyed. The survey's mandate to update all previously recorded resources led to the re-survey of some well-documented historic districts, such as Schenley Farms, as well as the re-evaluation of districts previously identified but determined ineligible for the NRHP, such as Frazier Street, Ophelia/Lawn, and Robinson/Dunseith. Resources previously recorded by PA SHPO or by the City of Pittsburgh (e.g., listed in the City's 1993 Pittsburgh Register of Historic Places inventory) composed 932 (46.6%) of the 2,003 total resources surveyed.

Because the groups of resources in the Schenley Farms and Oakland Civic Center districts at the heart of Oakland are so historically and architecturally significant, they have tended to define the neighborhood and to overshadow other resources that tell different stories about Oakland's history. This survey endeavored to seek out and document those other resources in hope that they will not be overlooked and that some of them can be preserved.

All surveyed properties were evaluated for integrity and given a "High," "Medium," or "Low" rating. Vacant parcels and those on which previously surveyed resources had been demolished were also notated in the tablets during the survey. Resulting data were used to identify individual properties with potential significance in the history of Oakland and the City of Pittsburgh and to evaluate the presence of potential NRHP-eligible and City historic districts.

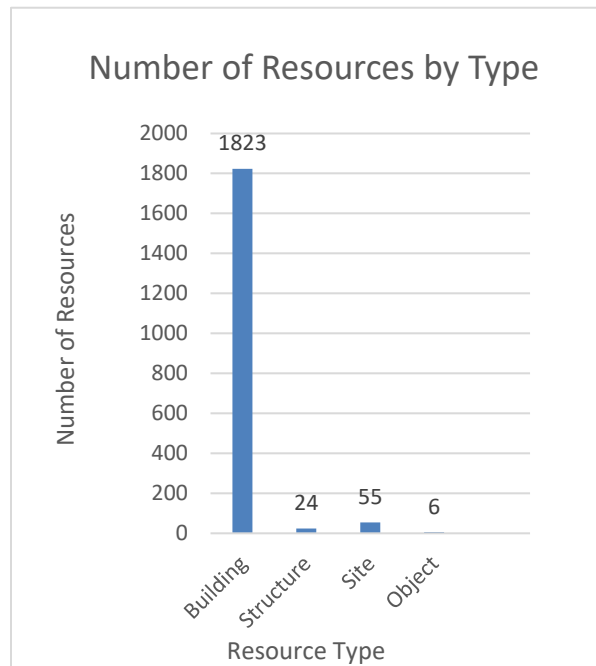

NRHP individually listed, NRHP individually eligible, and potential individually eligible resources throughout the survey area are displayed in Appendix C, Table 2. The location of potential individually eligible resources is shown in Appendix B, Figures 14-17. The location of previously surveyed resources is shown in Appendix B, Figures 2-5, and these resources are listed in Appendix C, Table 3. Properties within Oakland that are in the Schenley Farms Historic District are listed in Appendix C, Table 5. Properties within Oakland that are in the Schenley Park Historic District are listed in Appendix C, Table 6. Appendix C, Table 12 lists all newly surveyed resources.

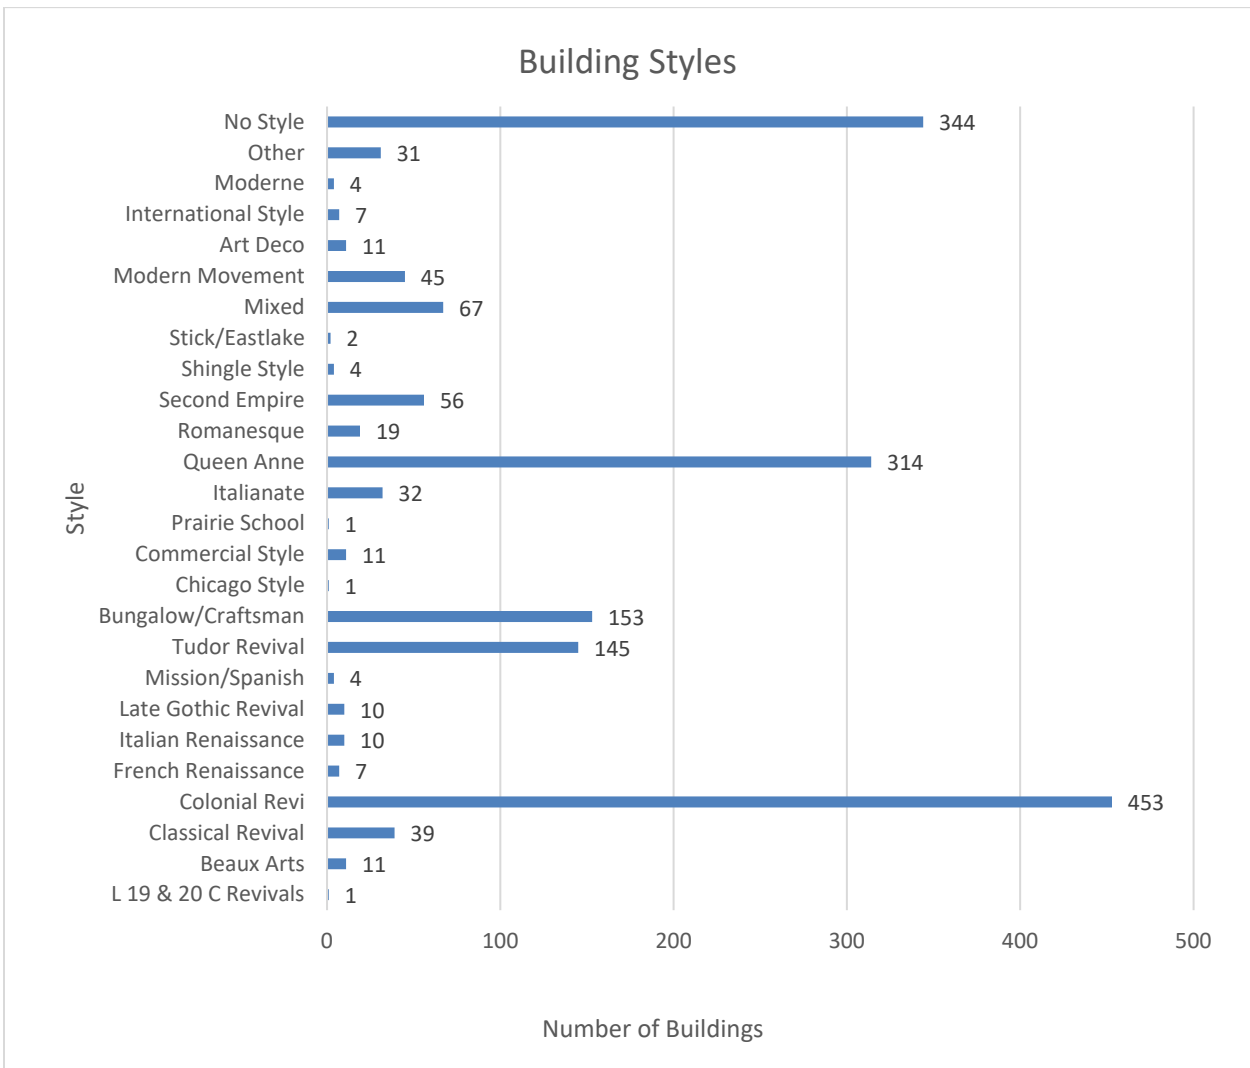

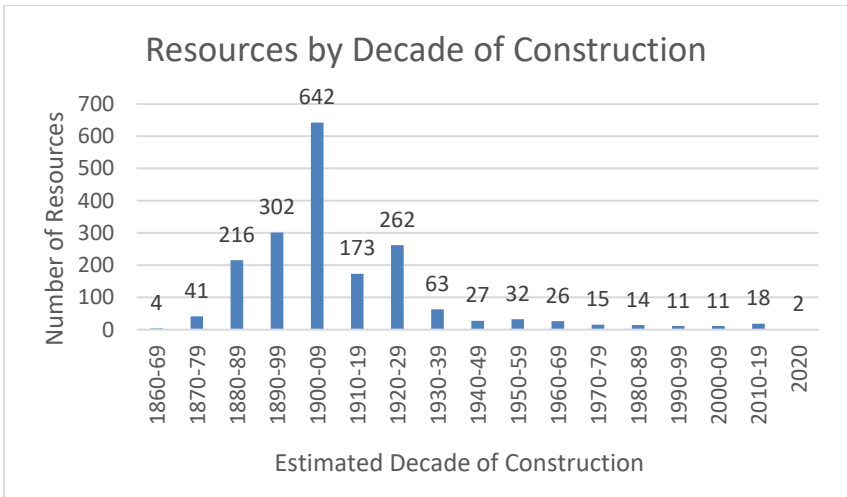

### **Types of Resources**

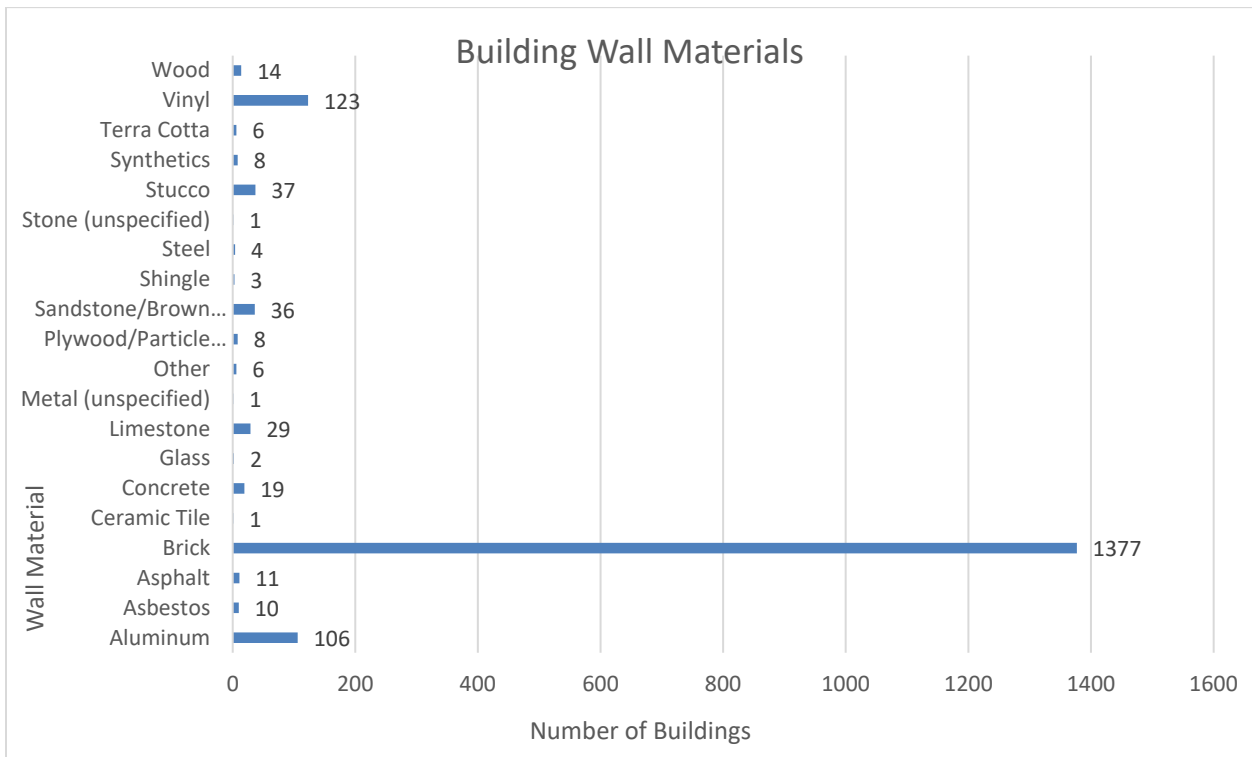

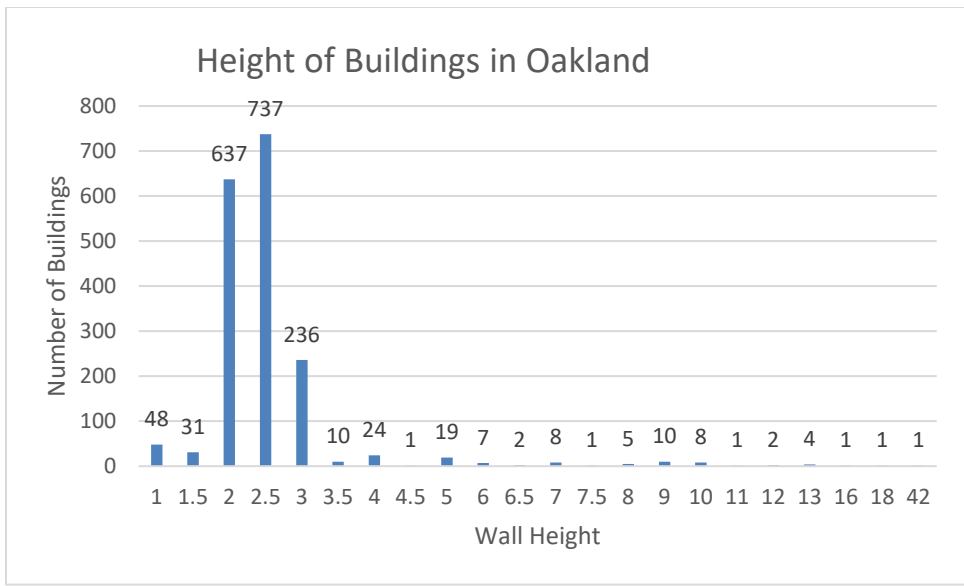

This survey found that Oakland maintains its historic character as a dense and intricately textured neighborhood of almost every conceivable land use in close proximity. From the mid-nineteenth through the mid-twentieth centuries, Oakland was a neighborhood of plans, both large and small, from speculative housing developments on single blocks in South Oakland to the major, transformative Oakland Civic Center that defines the character of North Oakland.

Most of the resources surveyed in Oakland (1,823, or 91%) were buildings. Sites accounted for 55 resources (2.7%), structures for 24 (1%), and objects, six (0.3%).

Consistent with historic development patterns, 1,378 (68.8% of surveyed resources) in Oakland were constructed between 1890 and 1929. Accordingly, styles popular during this period—Queen Anne, Colonial Revival, Tudor Revival, and Bungalow/Craftsman—are the most commonly represented in the survey area. The presence of a number of Classical Revival, Beaux Arts, Renaissance Revival, and Late Gothic Revival resources is indicative of the strong imprint of the City Beautiful movement that produced a significant collection of commercial and institutional buildings in Oakland in the early twentieth century. See Appendix B, Figures 18-21 for the geographic distribution of the four most common building styles in Oakland. A total of 262 resources (13% of total surveyed) were found to date from before 1890. Pre-1890 resources are mapped in Appendix B, Figures 10-13, and are listed in Appendix C, Table 4. There are 148 (7.4% of the total surveyed) properties that date from the period between 1930-1969. This survey counted 71 resources (3.5% of total surveyed) that have been constructed since 1970; however, this number is somewhat misleading, as surveyors focused on historic-age properties and left out many newer ones due to time constraints.

Of the total resources surveyed, the majority—1,498 or 75%—were categorized as “domestic” as their primary current use. The second-largest category, Commerce/Trade, applied to 148 resources (7.4%). Education-related resources numbered 66 (3.3%). The remainder of resources were categorized as Landscape (52, or 2.6%), Transportation (17, or 0.8%), Religion (16, or 0.8%), Health Care (13, or 0.6%), Industry/Processing/Extraction (5, or 0.2%), Recreation/Culture (5, or 0.2%), Government (3, or 0.1%), Social (1, or less than 1%), and Funerary (1, or less than 1%). “Other” comprised four resources, or 0.2%, and “Unknown” one. Finally, 57 resources (2.8%) were categorized as “Vacant/Not in Use” and 16 (0.8%) as “Works in Progress.”

For city planning purposes, Oakland is divided into four neighborhoods or political sub-districts: North Oakland, West Oakland, Central Oakland, and South Oakland. These areas share a broad history and context, while different factors in their historical development have led to distinctive characteristics in the present built environments of these sub-neighborhoods.

**North Oakland** includes most of Oakland’s large institutional resources—the University of Pittsburgh and the Carnegie Institute—along with adjacent commercial, residential, and park resources. Those associated with Oakland’s City Beautiful-era boom (ca. 1895-ca. 1937) are within the NRHP-listed Schenley Farms Historic District (and two overlapping City-designated historic districts, Schenley Farms and Oakland Civic Center). These resources have been well documented and will not be reiterated here, except to note that a few have been demolished since they were originally surveyed. These are the University of Pittsburgh School of Medicine (later Pennsylvania Hall), demolished 1998; Pitt Stadium, demolished 1999; and the Physicians’ Building, demolished 2011.

Within this previously surveyed area, the University of Pittsburgh campus has some major architectural elements from the 1950s and 1960s that were discounted by earlier documentation efforts focused on City Beautiful-era resources. This survey evaluated these resources for their potential individual eligibility. Hillman Library, in particular, was found to be an outstanding example of its type, style, era, and method of construction. Unfortunately, this resource is currently undergoing an interior renovation which will adversely affect its integrity. However, its high exterior integrity makes it a good candidate for individual designation as a City of Pittsburgh Historic Structure.

The North Oakland subsection of Bellefield also contains the early subdivision of “East Pittsburgh” along S. Craig Street, Neville Avenue, and cross streets Henry, Winthrop, and Filmore. This area still contains some small brick and frame houses from the 1870s, 1880s, and 1890s. Some have been acquired by the nearby universities and modernized in the process of adaptation to institutional use, but others retain unusual integrity for Oakland. Of particular interest is 306 S. Neville Street, a ca. 1865 Italianate cottage that was updated in the Colonial Revival Style ca. 1920.

Bellefield is one of the few places in Pittsburgh to have a notable concentration of apartment buildings designed for middle- and upper-middle class living. From Bellefield Dwellings of 1902-1904 to The Royal York of 1937, the apartment houses of Bellefield exemplify the application of the popular styles of the prewar period to large, multi-family residential buildings. Apartment buildings large and small continued to be built in the Bellefield district in the 1950s and 1960s, but most of those later examples lack architectural distinction. Exceptions are Neville House (1959) by Tasso Katselas, a textbook example of the International Style, and the green glazed tile-clad Winchester (1972), both on N. Neville Street. Smaller but also notable is a trio of ca. 1950 buildings, the Royal Windsor at 222 N. Melwood Avenue flanked by the South Windsor (216 N. Melwood) and the North Windsor (234 N. Melwood). These have a streamlined style straddling Moderne and early Modern with good integrity.

Other North Oakland buildings of Modern-era significance include the Graphic Arts Technical Foundation, an accomplished Brutalist composition of 1965 by WTW Architects, and the Virgil Cantini Home and Studio at 205 S. Craig Street, associated with the twentieth-century sculptor and mosaicist Virgil Cantini.

Unfortunately, some elements designed and fabricated by Cantini were removed from this building during a 2017 renovation by Carnegie Mellon University. A number of Cantini's sculptural works are also present throughout Oakland. The University of Pittsburgh is inventorying those under its ownership. It is important for the Cantini Home and Studio to be understood in their context.

North Oakland borders Shadyside and includes the Craig Street and Centre Avenue business districts, along with the westernmost block of historic Automobile Row on Baum Boulevard. Historically, automobile-related businesses also occupied nearby blocks of Centre Avenue and Craig Street. The timing of the demise of Luna Park was such that, when the former amusement park property at Baum Boulevard and N. Craig Street was redeveloped after 1910, the area filled with automotive businesses. Notable survivors from Automobile Row's heyday are the Oakland Motor Car Company at 400 N. Craig Street (architect Edward B. Lee, 1913) and the Samson Motor Company at 4643 Baum Boulevard (architect R. Maurice Trimble, 1918).

**West Oakland** contains the University of Pittsburgh's Upper Campus, the campus of Carlow University, and most of Oakland's medical institutions, as well as dense housing stock that connects Oakland to the Hill District via the hillside subsection known as Soho.

The early-twentieth-century hospital buildings at the core of most of Oakland's major medical institutions still exist, but most have been buried within decades of accretions that have also filled their original, spaciouly landscaped sites. Therefore, they lack integrity.

Bounded by Chesterfield Road to the east, Terrace Street to the north, Robinson Street to the west, and Fifth Avenue to the south is the campus of Carlow University. Its oldest building is the 1907 convent of Our Lady of Mercy, designed by Edward Stotz. The Mount Mercy powerhouse, now Aidan Hall, also dates to 1907. It shares a builder (Thomas Reilly) with the convent, and it is conceivable that it shares the architect, as well. Around it the rest of the campus is composed of brick buildings dating from the 1920s to the 1940s. Dunseith Street winds through the campus from Fifth Avenue at its south to Terrace Street at its north.

At Fifth Avenue and Robinson Street at the southwest corner of Carlow's campus is the historic complex of St. Agnes Roman Catholic Church. This Irish parish moved up the hill from Soho and built the school (120 Robinson Street, 1911), church (3217 Fifth Avenue, 1916), and rectory (3221 Fifth Avenue, 1922). St. Agnes closed in a consolidation of Oakland's Catholic parishes in 1993. St. Agnes's important, highly visible buildings are currently owned by Carlow University and threatened with demolition.

Despite the dense institutional character of West Oakland, there are still intact areas of attached and closely sited detached housing. Among the oldest and most highly visible examples is the row of late-Victorian rowhouses at 1-7 Robinson Street, which are terraced above Fifth Avenue. Built in 1886, these are transitional in style, with characteristics of both the Italianate and Queen Anne styles.

Downhill from them is the area of transition between Oakland and the Hill District, historically known as Soho. Fifth Avenue provides the linkage here, and it is lined with remnants of a once-vibrant commercial corridor. The row at 2027-2041 is particularly notable, but in poor condition. The Classical Revival Soho

Bath House (1908) is also located in this part of Fifth Avenue. It is a handsome survivor of a Progressive Era campaign to improve the health and sanitation of workers who lived in tenements without running water.

The east side of Robinson Street and both sides of Dunseith Street above Terrace Street were developed as the John F. Sweeney Plan in 1906-1908. Still intact today, this consists of 89 detached frame houses marching in soldier-straight lines up the hill. Four housing types are repeated in a pattern. This is an intact example of a typical middle-class speculative housing plan of the early twentieth century. It is not without any variety, but it lacks imagination in architecture and planning. This survey concurred with a previous determination that this district lacks architectural distinction and integrity of individual buildings.

Chesterfield Road is a steep, Belgian-block-paved street with 88 Tudor Revival Style houses built in 1923. Though the houses are repetitive, the climb of their façades and rooflines up the steep hillside gives Chesterfield Road a visual dynamism that would be lacking if the same houses were built on the flat. A few of the houses nearest to Fifth Avenue have been demolished for access to adjacent Montefiore Hospital, and most have been altered in various ways, yet Chesterfield Road's character remains largely intact.

**Central Oakland** contains most of Oakland's oldest residential resources, including a handful of houses remaining from Oakland's early period as a country retreat. In general, these survive with poor integrity. The original Italianate character of the Henry Johns house of ca. 1875 (3447 Dawson Street) is evident despite modern additions to convert it to a funeral home. Two houses from the 1870s-1880s and associated with the Wilmot family stand at 3403 and 3417 Dawson Street; the first's original Italianate or Second Empire character was altered by the addition of a Colonial Revival third floor in the early twentieth century, while the second is altered almost beyond recognition. The Second Empire-style John Dawson House of 1868 appears to be present at 3428 Dawson Street, likely moved in the 1890s to make way for a development by Charles Chance and his partner, Harriet Rook. A ca. 1870 house once owned by Joseph Laughrey at 412 Atwood Street retains its Italianate style in massing only.

Central Oakland also includes the oldest concentrations of urban-style housing from Oakland's beginnings as a streetcar suburb in the late nineteenth century. Sited on one of the earliest estate properties to be sold, subdivided, and platted, Meyran Avenue—along with Atwood Street and adjacent blocks of Bates Street—still exhibits attached and detached houses from the last third of the nineteenth century in varying states of integrity. Especially notable are the Italianate double houses on Meyran at Bates; a small Italianate house with relatively high integrity at 254 Meyran Avenue; and a ca. 1888 Queen Anne double house at 3616-3618 Bates Street. At 300 Meyran Avenue, the William Lenz double house (1899-1890) was unsympathetically renovated ca. 1970, but it stands out for its scale and ornament among its more vernacular neighbors. These factors suggest it was architect designed, but more research is needed.

The block of Coltart Avenue between Forbes Avenue and Louisa Street still displays most of the distinctive Queen Anne-style double houses built there as "Coltart Square" in 1887. The houses that originally faced Forbes Avenue and the first pair on each side below Iroquois Way have been demolished for commercial buildings and parking. Integrity of the rest varies widely, and the original gardens surrounding most have

been replaced by paving for the parking of multiple vehicles. Below Louisa Street, Coltart Avenue was developed between about 1920 and 1930 with a varied but stylistically consistent collection of Craftsman-style houses and duplexes.

McKee Place was laid out by 1900 with a wider cartway and more spacious setbacks. One of the first houses (ca. 1900) to be built on McKee Place was the Ann P. McKee house at number 311. This appears to have been built by one of the McKee heirs after the family estate was platted. McKee Place also seems to have been an early location of experimentation in the construction of groups of apartment houses for urban living. The row of three-story apartment buildings on the southwest side of McKee Place between Louisa and Bates streets was present by 1910, along with two apartment buildings across the street and three on adjacent blocks of Louisa Street. These Colonial Revival-style buildings have names evocative of the colonial era, such as The Jefferson, The Lafayette, and The Keystone. They may have been influenced by the 1902 construction of Frederick Osterling's grand Iroquois Apartments at 3600-3620 Forbes Avenue nearby.

At 362 McKee Place is the diminutive but elegant St. Mary's Episcopal Church, originally St. Matthew Protestant Episcopal Church, built in 1899. The church was designed by Charles Bartberger and has an organ donated by Andrew Carnegie. A stone wall and wooden gateway with a gabled rooflet mark the entrance to the church yard from the street. A 1945 fire station by Ingham and Boyd stands, with good integrity, at 259 McKee Place.

Perhaps the most intriguing component of McKee Place is the Craftsman-style row between St. Mary's Church and Bates Street (368-382 McKee Place). Each unit is a duplex cunningly disguised as a single-family unit and appears to be a modern interpretation of an English cottage. The row was designed in 1914 by Janssen and Abbott, who had recently designed the Masonic Temple and Pittsburgh Athletic Association in Oakland's Civic Center. The developer who commissioned the row was Eugene O'Neill, a prolific Oakland developer. This row is recommended for further study as a potentially eligible NRHP historic district.

O'Neill's other signature accomplishment in Central Oakland is Oakland Square, a late-Victorian-era residential historic district that is both City-designated and recommended NRHP-eligible (though the recommended NRHP boundaries differ from the City-Designated boundaries). The Queen Anne Style individual buildings of Oakland Square vary in integrity, but the development is most significant for its unique plan organized around a central green and open at one end to the views of Schenley Park.

Many of O'Neill's other projects were found to still stand in Central Oakland on Wellsford, Ward, Bates, and Zulema streets. The block of mansard-roofed houses at 3403-3431 Ward Street, built in 1884-1885, was O'Neill's first foray into speculative real estate development in Oakland. The row retains its distinctive rhythm of alternating single and double houses with a gap in the middle where a diagonal property line prevented a house from being constructed (in later years, this enabled one of the houses to add a driveway and garage). But unlike Oakland Square, this row does not show distinction in the area of planning and community development, and integrity is poor. Immediately west of this block, O'Neill laid out and built Wellsford Street with facing rows of attached three-story brick houses by 1900. The typology

is similar to that found on Parkview Avenue in the second phase of Oakland Square. Three apartment buildings designed by O'Neill later in his career, the Linden, the Andover, and the Rosement, are found on Bates Street near the southern end of McKee Place.

An almost intact 1908 development by the Hardie family, who owned a confectionary in the Strip District, is found on the 3400 block of Bates Street, adjacent stretches of Semple Street and McKee Place, and an alley, St. James Place, which runs between them. St. James Place is so narrow that it is inaccessible to vehicles; it and contains three attached houses. The Hardies' yellow-brick commercial and residential buildings display characteristics of the contemporaneous Craftsman and Colonial Revival styles, but their most interesting feature appears on the sides of the commercial buildings that anchor the development at the corners of Bates and Semple and McKee: reliefs of an apparent family motto, "Tout Hardi," a French phrase associated with the family crest of the Scottish McHardie clan. The Hardie brothers later added four apartment buildings to their real estate holdings, three of which still stand: the Kilkenny and the Argil on opposite sides of McKee Place, and the Hardie on Zulema Street. The fourth apartment building, the Tobermory on Zulema Street, was demolished and replaced with modern construction in 2015. Scattered buildings by the Hardie brothers also stand elsewhere in Oakland. The real estate endeavors of the Hardie brothers are worthy of further investigation.

The primary commercial blocks of Fifth and Forbes avenues run through Central Oakland. Especially notable are the Eureka Building at 3400 Forbes Avenue (architect Louis Stevens, 1925; former Jr. Order of United American Mechanics); Serb National Federation Building, 3414 Fifth Avenue (1925); Croatian Fraternal Union of America, 3441 Forbes Avenue (architect Pierre A. Liesch, 1928); Shanahan Transfer and Storage Building, 3460 Fifth Avenue (1918); Vanadium Building, 3520-3530 Forbes Avenue (Frederick Osterling, 1912); and the Oakland Natatorium, 3607-3611 Forbes Avenue (architect R.B. Melvin, 1907).

**South Oakland** is the area from the Boulevard of the Allies to the edge of the bluff overlooking the Monongahela River, where steel mills historically lined the riverbanks. South Oakland is almost exclusively residential, with many blocks of middle- and working-class housing from the late nineteenth and early twentieth centuries, except for an auto-oriented commercial corridor along the Boulevard of the Allies.

This survey affirmed that a district along Frazier Street and its side streets, surveyed and determined not eligible for the NRHP in 1997, remains ineligible. This neighborhood of vernacular houses from the late nineteenth through early twentieth centuries lacks integrity and architectural distinction.

This survey also updated and re-evaluated the Ophelia Street at Craft Avenue Neighborhood Historic District (Ophelia Street to Craft Avenue between Joe Hammer Street and Kennett Square). This district was also determined ineligible for the NRHP by the PA SHPO in 1997 due to lack of architectural distinction. Subsequent contextual research for this survey suggested that architectural distinction might actually be present in the unusual-for-Pittsburgh attached house forms by developer Hermon L. Dean, who also built similar properties in Philadelphia. Surveyors for this effort also considered the apartment buildings at the edge of this district near Craft Avenue (The Craft, The Elsinore, The Colonial, The Swearinger, The Kennett) to be a part of the potential district. Of these, The Colonial was an early work

of the important Pittsburgh architect Frederick Scheibler, Jr., but its integrity has been adversely impacted by later alterations.

Adjacent to this district, at 327 Craft Avenue, stands one of South Oakland's most important individual resources, the Gulf Research Laboratory (1929). This building by Ludlow and Schwab is a high-integrity example of the Art Deco Style whose sculptural reliefs have high artistic value. This survey found the building to be potentially individually eligible for the NRHP under Criteria A and C. Its high integrity also makes it an excellent candidate for designation as a Historic Structure under the City of Pittsburgh's Historic Preservation Ordinance.

Also nearby is the near-intact Rook and Chance Plan of ca. 1900. This T-shaped grouping of two-story brick rowhouses was built by local builder-turned-developer Charles Chance and partner Harriet Rook on Juliet Street and Virgilia Place. Only one house on Virgilia is missing. A fine trio of Queen Anne Style houses with moderate-to-good integrity stands around the corner of Juliet Street in the 500 block of Cato Street.

Edith Place is a narrow, block-long street of yellow-brick rowhouses laid out across the estate of William A. Scheibler shortly after 1900. William Scheibler was the father of architect Frederick Scheibler, Jr., who grew up in the house. The family home (3305 Dawson Street, Charles Bartberger, architect, 1888) appears to still to exist, but it was moved slightly northward from its original location ca. 1905 to accommodate the development of Edith Place.

Another through-block development of the early twentieth century occurs slightly south of this and also between Ward and Dawson streets. This is the contiguous pair of courtyard developments known as Oakland Court (1924) and Dawson Court (1926). Both courts consist of facing rows of attached bungalow-style houses set on a central green in the interior of the block rather than oriented to the street. Though their respective houses differ in their architectural details, Oakland Court and Dawson Court are coordinated in plan, and a central lawn runs uninterrupted (except by paths and steps) through the block between them.

The Four Mile Run subsection of Oakland in Junction Hollow was not surveyed as part of this project. Survey team members were aware of a concurrent City Historic District nomination that will document this area and decided to focus on other parts of Oakland rather than duplicate this effort.

### ***Integrity and Condition***

The survey area has integrity of location and setting. Oakland's rough triangle shape is situated above the Monongahela River and between the Hill District and the deep ravine that separates Oakland from Schenley Park and the more suburban-style neighborhoods of Pittsburgh's East End.

Historic district designation has largely preserved the groups of resources in the Schenley Farms and Oakland Civic Center districts at the heart of Oakland since the 1990s, but a great many smaller resources have been lost or altered since Oakland as a whole was last surveyed at around the same time. The presence of many major resources of citywide, regional, and even national importance in Oakland has

sustained a dynamic rate of development and re-development seen in few other Pittsburgh neighborhoods. The University of Pittsburgh, in particular, has been a tremendous factor in the replacement of older Oakland buildings with new construction and in the transition of residential neighborhoods from owner-occupied houses to apartment units designed for short-term occupancy by students. These trends have both affected Oakland's integrity—of individual resources, and as a neighborhood overall—and heightened the imperative to identify and preserve what intact historic fabric remains.

The integrity of materials, design, and workmanship of Oakland's individual resources varies widely. Commercial buildings have been altered in expected ways, with storefronts having the most frequent and complete changes from their original designs. University buildings have been "modernized" and historic hospitals have been all but obscured by numerous additions. Oakland's many residences have been altered in ways reflective of a broad transition from single-family, owner-occupied dwellings to rental properties managed as student housing by absentee landlords. The integrity of Oakland's individual buildings, and cumulatively of the neighborhood as a whole, has diminished accordingly. The university's attempts to slow this trend by building its own student housing is well-intentioned but has resulted in the wholesale loss of important historic resources, such as the mid-nineteenth-century house at 315 Oakland Avenue built by prominent glass manufacturer David Challinor (demolished for Bouquet Gardens) and the Physician's Building (demolished for Nordenberg Hall). As in many neighborhoods, the materials, design, and workmanship of Oakland's religious resources have proven the most stable over time.

Of 1,795 properties whose integrity was evaluated, the vast majority—1,243, or 69.3%—were ranked "Medium." This is a broad category that encompasses many buildings with alterations that diminish, but sustain, evidence of their original style. The most prevalent alterations are the covering of original siding and/or trim with modern materials, the replacement of original windows and/or the alteration of original openings and/or porches. Additions that alter massing are present in the survey area but less common because of the dense siting of most properties. The era of most of these alterations appears to be ca. 1950 to the present. Deferred maintenance has also had a detrimental effect on many of the historic-age properties. A "Low" integrity ranking was assigned to 359, or 20%, of resources surveyed. Only 193 individual properties, or 10.7% of those surveyed and ranked for integrity, were rated as "High" integrity resources whose original materials, design, and workmanship have been maintained or restored. See Appendix B, Figures 6-9 for a map depicting the historic integrity of surveyed parcels.

Oakland's role as an important center of culture and learning has kept its real estate desirable, so that only 100 (5%) of resources surveyed were vacant lots. By the same token, redevelopment pressures are high, especially in Central and North Oakland. To some extent, City-designated historic districts established in the 1990s have protected the most important resources in these areas. In the parts of Oakland that were surveyed, 59 (3%) of the resources were built after 1975.

As a whole, Oakland retains integrity of feeling and association, defined not by one or two themes, but many: cultural and educational center, early streetcar suburb and commercial corridor, showcase of architect-designed housing of the early twentieth century, focus of Pittsburgh's automotive sales and

service industry, and more. The historic multifariousness of Oakland continues to be reflected in the diversity of its contemporary built environment.

## Recommendations & Conclusions

Because this survey was designed to serve both the City of Pittsburgh and the PA SHPO, recommendations have been formulated for potential NRHP eligibility evaluations and for the use of survey data under the City of Pittsburgh's Historic Preservation Ordinance. It is important to note that successful historic preservation may take place independent of formal designation. Other recommendations pertain to properties meriting intensive-level study and the overall methodology of this survey effort, in general.

### ***Eligibility of Resources for National Register and City Listing***

The National Park Service defines a district as a type of resource that “possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development” (*National Register Bulletin 15: How to Apply the National Register Criteria for Evaluation*, 1997).

This survey confirmed that Oakland is a large neighborhood of exceptionally diverse land uses, building types, scales, and eras of construction. Some historic districts, both NRHP-listed and City-designated, already recognize the significance of concentrations of Oakland's most prominent and significant resources. Therefore, this survey did not contemplate the possibility of an Oakland-wide historic district but sought to identify additional areas that possess the distinctive qualities of association, architecture, or integrity suggestive of eligibility as potential historic districts.

The survey team identified the following districts as potentially eligible for the NRHP and/or designation as historic districts by the City of Pittsburgh:

**Oakland Square Historic District:** Already designated as a City of Pittsburgh Historic District, the area is recommended for listing in the NRHP with modified boundaries closely adhering to development documented to have been by Eugene O'Neill. See Appendix B, Figure 22 for the recommended historic district boundary and Appendix C, Table 7 for a list of resources in the proposed district.

**United Real Estate and Construction Company/H.L. Dean Plan Historic District (Ophelia Street at Craft Avenue Neighborhood):** Given the new contextual information about the developer and connections to Philadelphia that distinguish this neighborhood from contemporary residential enclaves developed by Pittsburghers, this previously surveyed district is recommended for additional research and a new determination of eligibility for the NRHP. The survey team also recommends the inclusion of the apartment buildings near Craft Avenue in the potential historic district boundary. See Appendix B, Figure 23 for the historic district boundary and Appendix C, Table 8 for a list of resources in the proposed district.

**Hardie Brothers Block Historic District:** The block bounded by Bates Street, Semple Street, McKee Place and St. James Place developed ca. 1908 by the brothers James and Edward Hardie is recommended for a determination of eligibility for the NRHP. The block's associations with the Hardie family, their larger real estate activities in Oakland, and the development's planned combination of different building types and

designs should be investigated for their NRHP significance. See Appendix B, Figure 24 for the historic district boundary and Appendix C, Table 9 for a list of resources in the proposed district.

**Automobile Row Historic District:** A determination of eligibility should be sought for a potential historic district encompassing the extant resources of Pittsburgh’s historic Automobile Row, including Baum Boulevard and related resources on Centre Avenue and N. Craig Street. This potential district extends beyond the Oakland Neighborhood into Shadyside along the Baum Boulevard and Centre Avenue corridors. Thus, this survey did not propose comprehensive boundaries nor contributing/non-contributing resources for such a district but noted its presence within Oakland. See Appendix B, Figure 25 for the historic district boundary (within Oakland only) and Appendix C, Table 10 for a list of resources in the proposed district (within Oakland only).

**McKee Place Historic District:** The 1914 row at 368-382 McKee Place is recommended for a determination of eligibility for the NRHP. It was designed by Janssen & Abbott contemporaneously with some of the firm’s most monumental work in the Oakland Civic Center and documents the range and breadth of the firm’s work during the heyday of Oakland’s development. This row is also a good candidate for City Historic Designation. See Appendix B, Figure 26 for the historic district boundary and Appendix C, Table 11 for a list of resources in the proposed district.

**Bellefield Apartment Historic District:** The possibility of a historic district—NRHP, City, or both—encompassing the major apartment houses of the Bellefield section of Oakland should be investigated. This survey did not propose boundaries nor contributing/non-contributing resources for such a district but noted its likely presence. Apartment buildings in the surveyed area that should be investigated as potential contributors to such as district are noted in Appendix C, Table 2, alongside other buildings with potential individual significance.

1. *Recommend preparing a nomination for listing Oakland Square Historic District in the NRHP.*
2. *Recommend a re-determination of eligibility for the NRHP for United Real Estate and Construction Company/H.L. Dean Plan (Ophelia Street at Craft Avenue Neighborhood) and related resources, including apartment buildings at and near Craft Avenue.*
3. *Recommend a determination of eligibility for the NRHP for the Hardie Brothers Block bounded by Bates Street, Semple Street, McKee Place, and St. James Place.*
4. *Recommend a determination of NRHP eligibility for 368-382 McKee Place.*
5. *Recommend further study to define boundaries and contributing/non-contributing resources in an Automobile Row Historic District and seeking a determination of eligibility for the NRHP.*
6. *Recommend further study to define boundaries and contributing/non-contributing resources in a Bellefield Apartment Historic District and seeking a determination of eligibility for the NRHP.*

### ***Intensive Level Survey Recommendations***

All of the resources in Table 2, with the exception of those already listed in or determined eligible for listing in the NRHP, are recommended for further study or intensive-level survey. Based on appearance and available background information, these resources have the potential to be eligible for listing in the NRHP and/or as individually designated City Historic Landmarks.

7. *Recommend resources identified in Table 2 as potential individually eligible for intensive-level survey.*
8. *Recommend resources identified in Table 2 as potential individually eligible that have pre-existing intensive-level documentation to be determined eligible for listing in the NRHP and/or individually designated City Historic Landmarks.*

### ***Other Recommendations***

Study of historic maps, building permit docket, and other documentation for this survey found that one individual, Charles Chance, was involved in a great deal of the development of Oakland, especially Central and South Oakland, in the late nineteenth and early twentieth centuries. Chance himself designed the houses he built with a degree of skill above that of the average builder. He had a fruitful affiliation with Eugene O'Neill, one of the most prolific and successful speculative developers in Oakland around the turn of the twentieth century, and eventually became involved in speculative development himself. Chance stated in 1904 that he had built over 250 houses in Oakland. Only a fraction of these have been verified

and documented. A future inventory of the work of Charles Chance would significantly contribute to our understanding of Oakland's development.

**9. *Recommend intensive-level survey and inventory of the work of Charles Chance in Oakland.***

***Use of Survey Data by City of Pittsburgh***

Eligibility for the NRHP is not determinative of eligibility for City historic designation. Moreover, it is not the policy or practice of the City of Pittsburgh to initiate nominations for city historic designation, but rather to evaluate and act upon nominations submitted by community members, organizations, and leaders. Therefore, recommendations for use of survey data by the City of Pittsburgh pertain to the Historic Review Commission's responsibilities under the City of Pittsburgh Historic Preservation Ordinance, §1101.07(b), to:

- Carry on educational activities in furtherance of the purpose of [the Historic Preservation Ordinance];
- Act in an advisory role to City departments and agencies related to preservation matters;
- Act as a catalyst to expedite the flow of projects through departments and agencies;
- Facilitate the redevelopment of historic structures and districts in accordance with approved development plans of the city;
- Act as liaison on behalf of the City with preservation organizations, professional societies, community and other groups, private property owners, and interested citizens, concerning conservation of the historic resources of the city;
- Act as a liaison on behalf of the City with the State Historic Preservation Officer, agencies of the federal government, the Advisory Council on Historic Preservation, and the National Trust for Historic Preservation, concerning the historic resources of the city;
- Prepare plans for the conservation and development of historic resources;
- Undertake or encourage and facilitate the documentation of the architecture and history of the city's historic resources.

In furtherance of these goals, it is understood that the Department of City Planning intends to fully integrate the list of potential NRHP individually eligible resources and other survey data into its geographic information system (GIS), so that it may serve as a tool in all aspects of implementing the City of Pittsburgh's comprehensive plan. This will be important to highlight those potentially eligible resources until such time as any formal efforts are organized to maintain and preserve them.

In order to keep Architectural Inventory survey data up to date, it is recommended that the Department of City Planning coordinate with other city and county agencies to obtain and periodically update the Architectural Inventory database with information related to building construction or demolition. For

example, on a regular basis data related to building demolitions and construction could be cross referenced with data from the Bureau of Permits, Licenses, and Inspections and the Allegheny County Assessor. Such interim data updates could utilize City Planning interns and would not typically require field checking.

As City Planning completes surveys of Pittsburgh neighborhoods, it is recommended that the survey data be shared with other community stakeholders and the PA SHPO to ensure its long-term preservation. An electronic database file (such as Microsoft Access) could be created with essential building attribute fields and photographs and should be saved on disk. A second file should be created in PDF format to ensure accessibility as computer programs and file compatibility change over time. Ideally, at least two paper copies of the survey data should be made. One paper copy would be kept in the City of Pittsburgh Archives and the other would be curated at a local independent archive. Possible community partners for data sharing are the Pittsburgh History and Landmarks Foundation, the Pennsylvania Department of the Carnegie Library of Pittsburgh, the Archives of Industrial Society at the University of Pittsburgh, the Architectural Archives at Carnegie Mellon University, and the archives maintained by Preservation Pittsburgh.

***10. Recommend the Architectural Inventory survey data, which has been incorporated into the City's GIS, be utilized while planning for the city and when implementing aspects of the comprehensive plan.***

***11. It is recommended that Pittsburgh Department of City Planning develop best practices to keep the database and GIS files relevant and useful in the long term and ensure its archival stability.***

It is also recommended that the Department of City Planning, through its Historic Review Commission, Historic Preservation Planner, and relevant Neighborhood Planner, continue the practice—piloted in Sector 1—of sharing survey results with the survey community in a meeting. In areas that have not traditionally had a strong culture of preservation awareness or action, the purpose will be to start a conversation about historic preservation in the surveyed community. In areas with established historic districts, the conversation may continue at a higher level about expansion of current preservation activities. Meetings should include a variety of stakeholders, including local community groups, preservation organizations, and residents and property owners, as well as Historic Review Commission representative(s), city officials, and PA SHPO staff. Ideally, the survey area's City Council representative would host the meeting at a location within the survey area. A typical meeting agenda might be:

- Introductory presentation about the benefits historic preservation (for “new” communities) or the accomplishments of historic preservation to date (for “experienced” communities);
- Summary overview of historic preservation tools and practices (NRHP, local designation, tax credits, etc.);
- Description of survey activity and presentation of results in that neighborhood or sector;
- Discussion of how City will use data and possibilities for how the community might use it;

- Question and answer.

In addition, convening a community meeting prior to the start of the survey to inform residents and property owners of the project’s goals, prepare them for the presence of surveyors on the streets, and gather community-based information will be helpful to future survey efforts.

**12. Recommend the results of the Architectural Inventory and survey data be shared with subject neighborhoods at a neighborhood or district meeting.**

**13. Recommend convening a community meeting prior to the start of future surveys.**

**Methodology of the Project**

Within the confines of the current project, surveyors gathered data on 932 previously surveyed resources and 1,071 newly surveyed resources (see Table 1, below, for estimates of survey completion; Appendix C, Table 12 for a list of newly surveyed resources).

<b>Table 1: Survey Completion</b>			
	<b>Surveyed Parcels to Date (Architectural Inventory Phases 1-10)</b>	<b># Parcels City-wide</b>	<b>% Complete City-wide</b>
Not Previously Surveyed	16,614	139,375	11.9%
Previously Surveyed	1,851*	13,385	13.8%
<b>Total</b>	<b>18,465*</b>	<b>152,760</b>	<b>12.1%</b>
* <i>Previously Surveyed refers to parcels surveyed prior to the commencement of the Pittsburgh Architectural Inventory. This number excludes 53 previously surveyed resources in Sector 1 whose tax parcels have been abolished.</i>			

*Surveyed Properties*

The survey of Oakland is the tenth phase of an on-line, tablet-based data collection method piloted in City Planning Sector 1. In this survey, consultants used PC-platform tablets purchased by Michael Baker after the City retired the iPads utilized for previous surveys. Survey team members also carried wireless hot spots (also purchased by Michael Baker) to ensure consistent wireless coverage needed to save and update data throughout the survey area. The same data collection application used in previous surveys, Collector for ArcGIS, was loaded onto the new tablets for use in the field.

During this survey, the project team experienced some familiar problems with hardware and software. A persistent hardware problem throughout all the City surveys has been the limited battery life (less than an 8-hour workday) of each tablet. Michael Baker’s tablets are not compatible with mobile chargers, and

there are not enough of them to assign two to each surveyor. In the past, surveyors utilized outlets in the local eateries during lunch breaks to recharge the tablets halfway through the day; however, due to COVID-19-related restrictions on indoor dining, this was not possible during this survey. Thus, the length of time per day that each survey team member was able to work was dependent upon the battery life of the tablet.

In this survey, consultants had a better understanding of a problem which affected previous surveys, i.e. the failure of some photographic attachments to save. It was observed that editing the same record twice in a row, then submitting an attachment to a new record, would cause the attachment to the first record to be erased. With this knowledge, surveyors were able to decrease the percentage of records lacking attachments from 10% (average in previous surveys) to close to zero.

Other, persistent problems with survey methodology mostly pertain to gaps between data collection in the field and its accurate representation in tables and maps, which need to be created afterward in the office. Because mapping is generated on the basis of tax parcels, it cannot represent all the data collected in the field, for example: multiple addresses and/or multiple uses per parcel, and/or multiple uses in a single building, complex, or group of related buildings. A second "Use" field would allow the collection of more complete data but would not solve the issue of overly simplistic mapping.

In this survey, a significant amount of office time was devoted to collecting, verifying, and correcting data on previously surveyed resources from PA SHPO's CRGIS system. This effort was proportionally larger for this survey because of the great number of resources (932) in Sector 14 that have been previously surveyed. In order to aid in the accurate gathering of data in the field, information from previous surveys, including construction dates and architect/builder names, was entered into property records prior to fieldwork. Because of the large number of existing listed and previously surveyed potential historic districts in Sector 14, boundaries for historic districts were loaded into the tablets prior to fieldwork. This effort made it easier for surveyors to evaluate the integrity of existing and potential districts and make recommendations for changes to district boundaries, if warranted, based on changes that have occurred since listing or the district's last evaluation. One additional task completed prior to fieldwork that is new to this survey effort is the examination of historic maps, building permits, and newspapers to document the developers of Oakland's various subdivisions or housing plans. Prior to fieldwork, notations were made in individual building records to indicate the names of builders and/or developers when known. Polygons were also drawn in ArcGIS Collector prior to fieldwork to show the boundaries of various related housing plans. These upfront efforts consumed a significant amount of time, and therefore the number of newly surveyed resources is proportionally smaller for this survey than for past surveys; however, the richness of data analysis and level of historical information collected for resources in this survey surpasses that of previous efforts. It is expected that the decision to collect this level of property-specific data will be made on a case-by-case basis in future surveys. Such efforts will likely be worthwhile when there are a large number housing plans whose potential significance in the areas of community planning and development is not readily apparent from the physical appearance of their buildings.

## Appendix A: Attribute Fields – PA SHPO & City of Pittsburgh Survey Requirements

### *Attributes (for each address point surveyed)*

**As per City of Pittsburgh:** Checkboxes for the following categories:

- Potentially Eligible Individual
- Potentially Eligible District
- Vacant – Not Surveyed
- Post 1975 – Surveyed
- Integrity LOW – Surveyed
- Integrity MED – Surveyed
- Integrity HIGH – Surveyed

**As per PA SHPO Minimum Record for CRGIS:**

- Historic Name, or blank if there is none
- Resource Type (NR category)
  - Building
  - Site
  - Object
  - Structure
  - District
- Tax Parcel (Allegheny County Lot-and-Block number)
- Location (when address and/or tax parcel is absent)
- USGS Quad
- UTM Zone
- Lat/Long. Coordinates for each address point
- Address
- City
- Municipality
- County
- Zip Code
- Owner Type (public, private, or corporate)
- Owner Name
- Number of resources

- Bays Wide
- Stories
- Key Number
- Inventory ID Number
- Associated Resources
- National Register Status
  - Undetermined
  - NR Listed
  - NR Eligible
  - NR Listed District
  - NR Eligible District
- Year Built 1
- Year Built 2 (Additions/alterations)
- Date of Survey Form (date of data collection)
- Surveyor Name
- Project Name
- Photographs/jpgs
- Style (primary style and secondary style, if applicable)
  - Colonial
    - Georgian
    - French Colonial
    - Spanish Colonial
    - Dutch Colonial
    - Postmedieval
    - English
  - Early Republican
    - Federal
    - Early Classical
    - Republican
  - Mid-19TH Century
    - Greek revival
    - Gothic Revival
    - Italian Villa
    - Exotic Revival
  - Late Victorian
    - Gothic
    - Italianate
    - Second Empire
    - Stick/Eastlake
    - Queen Anne
    - Shingle Style

- Romanesque
- Renaissance
- Octagon Mode
- Late 19TH & 20TH Century Revivals
  - Colonial Revival
  - Classical Revival
  - Tudor Revival
  - Late Gothic Revival
  - Mission/Spanish
  - Beaux Arts
  - Italian Renaissance
  - French Renaissance
- Late 19TH & Early 20TH Century American Movements
  - Prairie School
  - Commercial Style
  - Chicago
  - Skyscraper
  - Bungalow/Craftsman
- Modern Movement
  - Moderne
  - International Style
  - Art Deco
- Other
- No Style
- Mixed
- Exterior Materials (complete for wall, foundation, roof, and “other,” if needed)
  - Adobe
  - Aluminum
  - Asbestos
  - Asphalt
  - Brick
  - Bronze
  - Cast Iron
  - Ceramic tile
  - Cloth/Canvas
  - Concrete
  - Copper
  - Earth
  - Fiber glass
  - Glass
  - Granite

- Iron
- Lead
- Limestone
- Log
- Marble
- Metal, unspecified
- Nickel
- Other
- Plastic
- Plywood/particle board
