The Architectural Inventory for the City of Pittsburgh, Allegheny County, Pennsylvania, was made possible with funding provided by the Pennsylvania State Historic Preservation Office (PA SHPO), the City of Pittsburgh, and the U.S. Department of the Interior National Park Service Certified Local Government program.

The contents and opinions contained in this document do not necessarily reflect the views or policies of the Department of the Interior. This program receives federal financial assistance for identification and protection of historic properties. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, as amended, the U.S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, disability, or age in its federally assisted programs. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to: Office of Equal Opportunity, National Park Service; 1849 C Street N.W.; Washington, D.C. 20240.

Abstract

This architectural inventory for the City of Pittsburgh (Planning Sector 5: Carrick Neighborhood) is in partial fulfillment of Preserve Policy 1.2, to **Identify and Designate Additional Historic Structures, Districts, Sites, and Objects** (*City of Pittsburgh Cultural Heritage Plan, 2012*). This project is the fourth phase of a larger undertaking which aims to ultimately complete the architectural survey for all of Pittsburgh’s Planning Sectors. The scope of this project provided for the partial completion of Pittsburgh’s Carrick Neighborhood in Planning Sector 5.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort’s methodology, with emphasis on lessons learned and recommended modifications for future surveys.

All previously surveyed resources within Carrick were field checked and an updated survey record was prepared. Project historians conducted a reconnaissance-level survey in the Carrick neighborhood and collected data for the entire Brownsville Road corridor as well as selected parcels that were deemed of interest in relation to the historical development of the neighborhood or because they were part of groupings of parcels with high levels of architectural integrity.

Project historians surveyed the following resources:

PREVIOUSLY SURVEYED

- 64 Previously Surveyed Extant Resources
- 4 Previously Surveyed Resources – Now Demolished
 - 2 Previously Surveyed Demolished Resources -- replaced with new buildings post-1975
 - 2 Previously Surveyed Demolished Resources—now vacant lots
- **68** **TOTAL** Previously Surveyed Properties *Resurveyed*

NEWLY SURVEYED

- 1,594 **TOTAL** Newly Surveyed Resources

TOTAL SURVEYED

- 1,662 **TOTAL** Resources

ELIGIBILITY RECOMMENDATIONS

- 14 Previously Surveyed Parcels – Potentially Individually Eligible for National Register
 - 3 Newly Surveyed Parcels – Potentially Individually Eligible
-
- **17 Potentially Eligible Resources** Recommended for Intensive Level Survey

In addition to the 17 resources recommended potentially individually eligible for the National Register, three potential historic districts were identified: the subdivision Raleigh Square, a portion of Hornaday Road, and a portion of The Boulevard. Concord Elementary is recommended as a contributor to the Pittsburgh Public Schools National Register District (which is a change from a 1985 PA SHPO determination that Concord School was a non-contributor to the district). The Duquesne Light Company Substation has the potential to contribute to a National Register District that includes all Duquesne Light Company substations, if such a district were to be nominated. In addition, four brick streets (Birmingham Avenue, Wynoka Street, The Boulevard, and Hornaday Road) would contribute to a potential linear historic district relating to brick streets in Pittsburgh. The Carrick neighborhood also contains one property that the PA SHPO has determined eligible for listing in the National Register, the Hays Mine Chemical Treatment and Water Filtration Plant (aka Hays Mine Station, Pittsburgh Water Company), Key No. 156300. There are no National Register-listed properties in Carrick.

This project was administered by the City of Pittsburgh with support from PA SHPO staff. Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards* (36CFR61) for history and/or architectural history. Consulting firms include Michael Baker International, Inc., Clio Consulting, and Cosmos Technologies, Inc.

This project was funded in part by a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant, the program guidelines of which can be found at http://www.portal.state.pa.us/portal/server.pt/community/grants/3794/certified_local_government_grant_program/417950.

Introduction

In 2013, the City of Pittsburgh received a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant for partial funding of an architectural inventory of Pittsburgh neighborhoods. The first phase of the Pittsburgh Architectural Inventory focused on the Troy Hill Neighborhood and was completed in October 2014. The second phase focused on the Spring Garden and Spring Hill-City View neighborhoods and was completed in February 2015. The third phase focused on the Planning Sector 12 neighborhood of Larimer and was completed in September 2016. The present survey (phase four of the Pittsburgh Architectural Inventory) focuses on the Planning Sector 5 neighborhood of Carrick. The survey was conducted in July and August 2016, and the report was compiled in September and October 2016.

The City of Pittsburgh is divided into 16 planning sectors. Each sector contains a number of neighborhoods and is delineated based on a number of factors, including neighborhood and ward boundaries and topographical features. The City chose to focus the fourth phase of its architectural inventory on the South Pittsburgh neighborhood of Carrick in an effort to gather additional information on the neighborhood's historic resources after a study was completed that examined the potential for a neighborhood conservation district in Carrick. After two weeks of survey work, project historians had surveyed 1,662 resources, of which 1,594 were newly surveyed and 68 were previously surveyed (Figures 1-3, Appendix B). All pre-1976 properties with medium or high integrity were recorded using the PA SHPO minimum survey requirements (see Appendix A). Survey data were uploaded in real time to the City's Geographic Information Systems (GIS) database via tablet computers. These data were later re-formatted and transmitted to PA SHPO in a Microsoft Excel file in accordance with PA SHPO's Cultural Resources Geographic Information System (CRGIS) requirements.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

Qualifications

Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards* (36CFR61) for history and/or architectural history. Project historians included Jesse A. Belfast, of Michael Baker International, Inc., and Angelique Bamberg of Clio Consulting. Project maps and data tables were compiled by Suraj Shrestha, E.I.T., of Cosmos Technologies, Inc.

THIS PAGE INTENTIONALLY LEFT BLANK

Goals and Objectives

In 2012, the City of Pittsburgh Department of City Planning released its Cultural Heritage Plan as a component of its first comprehensive plan. Resulting from the plan, the need to document historic architectural resources was identified with the goal to:

Document the City's cultural and historic resources in ways that are accurate, meaningful, comprehensive, and useful to the City and the general public.

The Cultural Heritage Plan noted that the Historic Resources Inventory should be a “dynamic, comprehensive list of the City’s historic resources.” Further, according to the plan, the existing inventory of historic resources (over 13,500 parcels identified as being historic on some level) “needs to be field checked and continually updated as physical conditions change and additional resources are listed in the National Register of Historic Places or designated under the City’s Historic Preservation Ordinance” (Cultural Heritage Plan, 112).

To realize these goals, the City prepared policies with corresponding action items in the historic preservation plan. This current field survey is in partial fulfillment of those items, including:

PRESERVE POLICY 1.2 - Identify and Designate Additional Historic Structures, Districts, Sites, and Objects

PRESERVE 1.2-A: Conduct a Citywide Reconnaissance Survey (cursory visual inspection).

Identify areas that are potentially eligible for new listings as City-Designated Historic Districts and National Register Historic Districts. Focus on areas that:

- Have been previously identified as potentially eligible (see Cultural Heritage Plan Appendix B).
- Have a high percentage of structurally-sound and architecturally significant pre-1940 buildings.

Identify individual structures and sites outside of City-Designated and National Register historic districts that are potentially eligible for individual nomination as a City-Designated historic resource and/or for listing in the National Register of Historic Places. Focus on structurally-sound resources that:

- Would not otherwise be part of an eligible historic district.
- Are significant or unique for their architecture and/or engineering.
- Would severely and adversely impact the neighborhood's form, character, or economic growth potential if demolished or negatively altered. (Consider existing and former

schools, religious buildings, and civic or quasi-civic spaces such as libraries, parks, fire stations, community centers, etc.).

Therefore, this current survey effort represents the City's second effort to identify previously unsurveyed historic resources within Sector 5's Carrick neighborhood, in partial fulfillment of the above-mentioned goal. In addition, the City intends to use this project to further develop and refine the methodology for conducting architectural surveys that was used in the first through third phases of the Pittsburgh Architectural Inventory (October 2014/February 2015/September 2016).

Methodology

Background Research

Prior to initiating fieldwork, the project team conducted background research and reviewed published literature to identify and obtain sources of information pertinent to the history and architecture of Carrick. A review of existing Pittsburgh history texts helped to predict the types of properties that should be expected in the survey area; historic mapping illustrated patterns of development and periods of growth in the neighborhood.

Reconnaissance Survey

The survey consultants, in consultation with the City and PA SHPO, determined that scattered properties should be surveyed that were of historic age (pre-1976) and retained enough integrity to be considered a “contributor” to a potential district (i.e. medium level of integrity or higher), in an effort to understand the overall character of a neighborhood. It was also decided that in areas which could potentially be eligible for listing in the National Register as districts, a building-by-building survey would still be necessary. If building parcels were not old enough, vacant, or had no integrity, then the surveyor could check the respective box on the tablet indicating why the PA SHPO minimum requirements were not filled in for that resource. For buildings with low integrity, a photograph was taken and only the data field for current use was completed. The survey consultants also decided to photograph all non-vacant parcels (i.e. those with building, structures, or landscape features such as parking lots or gardens), regardless of integrity, in areas that had historic district potential because it required minimal effort when the surveyor was entering information on integrity anyway; moreover the photographs enabled project historians to review the condition and integrity assessments after the fieldwork was completed in order to assure consistency in integrity assessments among surveyors. Such additional photographic data provide an overall view of an area’s integrity and the nature of intrusions in a potential historic district. In the future, this photographic documentation will provide a complete snapshot of a particular area and be a rich source of archival data to document change over time in Pittsburgh’s neighborhoods.

The survey team consisted of two architectural historians who spent approximately two weeks in the field with tablet computers. The tablets were pre-programmed with county property parcel maps and a fillable database of attribute fields developed by the project team to satisfy CRGIS database requirements (see Appendix A).

The number of hours allotted for fieldwork allowed the survey team to conduct a partial survey of Carrick. Project historians began by surveying all of Brownsville Road, which spans the neighborhood and was prioritized for survey by the City. We then utilized historic maps and other information to direct our efforts to the oldest parts of the neighborhood and to areas we predicted would provide us with a representative overview of Carrick’s development. All previously-identified resources were also checked and updated.

Members of the survey team found it critical to establish consistency in the use of certain fields at the beginning of the survey. Use of the following fields is explained:

- **Potential Individual Eligibility:** “Yes” was entered for all properties that had been identified as significant or potentially significant in any previous survey. Surveyors also entered “Yes” for a select few properties discovered through background research to have been significant in the historical context of the community (e.g. the Passionist Convent) and for properties whose architecture stood out (such as the houses at 2314-2316 Brownsville Road and 2004 Hazeldell Street), suggesting that further research on their history was warranted.
- **Potential District Eligibility:** Due to Carrick’s large size and long period of development, leading to variable neighborhood characteristics, the project team determined near the beginning of the survey that the neighborhood as a whole likely was not suitable for historic district designation. However, during the field survey, the project team sought to identify smaller divisions of the neighborhood or groups of related resources with sufficient integrity for historic district potential. Analysis of potential district boundaries was done after the field survey was completed and integrity maps of the surveyed areas had been generated. Therefore, use of the Potential District Eligibility field was not used to identify resources that might contribute to a neighborhood-wide district. Instead this field was marked “Yes” only for smaller groupings of historic resources that were deemed in the field to have potential historic or architectural significance: The Boulevard, Hornaday Road, and Raleigh Square. Entering “No” in the potential district eligibility field was reserved for resources in these areas with low integrity and for resources outside of a potential district’s likely period of significance.
- **Integrity:** For this field, broad categories of “High,” “Medium,” and “Low” were utilized. Resources in the survey area were judged to have some integrity if, despite some alterations, their original character was discernible. A property that had artificial siding but all original trim, windows, and doors intact might be given a rating of “High.” “Medium” was assigned to those that exhibited artificial siding and replacement windows and/or doors, but that retained their original size, scale, rhythm and proportion of openings, and possibly some original ornamentation. “Low” was used for properties with drastically altered facades and/or massing, such that their original character had been obscured.
- **Style:** Correspondingly, where a resource’s original style was evident in its massing, extant detail (such as brackets), and/or characteristic feature (such as mansard roof), that style was entered in this field. Resources with low integrity, where no such clue as to original style remained, were assigned a value of “No Style,” even if context suggested a specific era of construction. In the Carrick survey, “No Style” was also entered for a variety of mid-twentieth century properties built during the historic period (i.e., before 1976) but which lacked overt ornamentation and were not described

by any of the standard PHMC style categories. Examples include ranch houses, split levels, and other housing built in the 1950s and 60s as well as minimal traditional type houses from the ca. 1935-1950 period. The survey area also included many Cape Cod Style cottages from this era. Surveyors chose to interpret these as a late variant of the Colonial Revival Style, but included “Cape Cod” in the Comments field to differentiate these houses from early twentieth century Colonial Revival resources.

- Vacant parcels and properties constructed post-1975 were noted with a “Yes” in those fields. Additional fields and photographs were not taken for vacant properties. For post-1975 buildings, sites, and structures, photographs were taken and the current function was recorded. Parcels that were not occupied by a structure but that were in use (such as parking lots, parks, and gardens) were entered as “sites” and assigned a relevant function from the CRGIS-supplied drop-down list; such sites were also photographed.
- The “Year Built” fields were entered in the field and were estimated based on materials, method of construction, style, and context.
- The “Comments” field was used by surveyors to record any additional features of note and for noting grouped resources (i.e. double houses, blocks of identical row houses, or resources that are otherwise historically related). Project historians also used the Comments field to note local property types deemed to be of special interest.

Database Management

Once the reconnaissance survey was complete, the City GIS department uploaded the results from the platform software to Microsoft Excel. Spreadsheet data were reviewed for accuracy and completeness. PHMC Key Numbers and Inventory ID numbers were manually entered for all 1,662 surveyed resources. After the Excel File was complete, it was used to generate mapping (Appendix B), and tables (Appendix C). The Excel File was sent back to the City for re-upload into the City’s GIS system so that the City would have the most accurate and complete data from the survey. The GIS data concluded the deliverable for the City to incorporate into its Historic Resources Inventory.

PA SHPO required a slightly modified spreadsheet to update its CRGIS database. A copy of the City’s database spreadsheet was modified by removing irrelevant data fields, by reformatting column headings to use CRGIS naming conventions, and by adding primary (i.e. common) Inventory ID records for grouped resources that share a key number. Typical examples of grouped resources are a block of identical row houses or a double house. Information included in the primary record for the resource group included such fields as an address range, architectural styles, and materials. For grouped resources, the primary Inventory ID number consists of the CRGIS Key Number plus the suffix .0001, and related resources are numbered sequentially beginning with the suffix .0002. Thus, for a grouped resource with Key Number 123456, the primary record’s Inventory ID would be 123456.0001 and the first related resource’s Inventory ID would be 123456.0002.

THIS PAGE INTENTIONALLY LEFT BLANK

Historical Context/Background History

The neighborhood of Carrick lies at the southeastern edge of the City of Pittsburgh in Planning Sector 5, South Pittsburgh. It is bordered by the independent boroughs of Baldwin and Brentwood to the east and Mount Oliver to the north, as well as the city neighborhoods of Saint Clair, Mount Oliver, Knoxville, and Bon Air. Carrick is situated on a hilltop with its primary thoroughfare, Brownsville Road, running along its crest. Brownsville Road developed along a historic trade route between Pittsburgh and Brownsville utilized by Native Americans, farmers, and merchants. It has also been known as the Brownsville-Pittsburgh Toll Road, Birmingham and Brownsville Macadamized Turnpike Road, Brownsville Plank Road, and Southern Avenue.

In 1763, Carrick was part of the Ormsby Tract of 2,400 acres granted by King George III to Major John Ormsby for his service during the French and Indian War. Its earliest settlers were Irish immigrants who arrived after the Revolution. In 1818, Noble Calhoun bought all of what is now Carrick for \$5,000 from Nicholas Bausman. Calhoun sold the land to William Noble in 1842.

At this time, the cluster of residences along Brownsville Road was known as Engleartville after the Engleart Glass works in the area. The first Concord Presbyterian Church, a one-story frame structure, was built at its present location along Brownsville Road in Engleartville in 1831. (This was replaced by a two-story frame church with a belfry in 1884 and the current stone church building in 1914.) The town name became Carrick in 1853 when a post office was established. The name was selected by Dr. John O'Brien, a physician who moved to the area in 1846, in honor of his native town, Carrick-on-Suir, in County Tipperary, Ireland.

In 1855, coal mine operators acquired 100 acres of Noble's property for \$45,000; ten years later, they purchased another 100 acres for \$106,000 (Pittsburgh Neighborhood Alliance, 2). By 1872, Carrick's landscape was dotted with coal mines which fueled the Jones & Laughlin steel mill (located on the Monongahela River, about 2.5 miles northeast of Carrick). The area's first subdivision, the Keeting (or Keeling) Plan, had also been laid out at the present location of Dellrose, Westmont, Oakhurst, and Mt. Joseph streets and Copperfield Avenue between Newett Street and West Agnew Avenue. These blocks would form the core of the village known as Spiketown, which is shown in detail on the 1896 Hopkins map (Plate 1). Spiketown was occupied by miners and may have been named for the Speiker family, which lived in the area. Another story concerning Spiketown's name holds that its residents used mine spikes in the construction of their homes (Carrick-Overbrook Historical Society, "Spiketown"). North of Spiketown, the South Side Cemetery had been established by 1872, but did not acquire its present size and layout until around 1880.

By 1896, two large adjacent subdivisions, "South View Place" and "Nobleton," filled the area across Brownsville Road from the South Side Cemetery between Alries and Laughlin avenues (Plate 2). Within them, Linnwood Avenue, Birmingham Avenue, The Boulevard, and East Meyers Street (then Phillips Avenue) had been laid out, but only a few, mostly frame houses had been built. Though platted across Transverse Avenue, which was the boundary between South View Place to the west and Nobleton to the east, The Boulevard was never built across Transverse.

Plate 2: Detail of Nobleton and South View Place (G.M. Hopkins & Co., 1896).

Phillips Avenue was named after the Phillips family, important citizens of Carrick around the turn of the twentieth century. John Phillips built a mansion on 12 acres fronting Brownsville Road at the location of the present Hornaday Road after the Civil War. After his death in 1907, his home was demolished and his nephew, John M. Phillips, developed the housing plan known as Phillips Manor on his uncle's estate.

John M. Phillips was an engineer, conservationist, City Councilman, and PA Game Commissioner who owned the Phillips Mine and Manufacturing Company on the South Side. He named Hornaday Road after his friend, William T. Hornaday, director of the New York Zoological Park (now the Bronx Zoo). The other streets in the plan are East Agnew, Madeline, Rehman, Dowling, Scout, and Redrose. Agnew Street was named for the Agnew Glass Works, which was founded at Agnew Street and Brownsville Road in about 1860. The name of Scout Avenue reflects Phillips' passion for Boy Scouting. Revision Way was, literally, a revision to the Phillips Plan of Lots to permit access to the rear of properties on Scout Avenue and Madeline Street.

John M. Phillips built his own house, "Impton," in 1890 at 2336 Brownsville Road on property currently owned by St. Pius X Byzantine Catholic Church. The stone retaining wall at the front of this property dates

from the time of the John M. Phillips estate. Phillips died in 1953, and Impton was sold or donated to the church and demolished thereafter. John M. Phillips led a campaign to have Brownsville Road paved, widened, and improved with sidewalks, which promoted more rapid development in Carrick (Carrick-Overbrook Historical Society, “Carrick Glossary of Terms,” and Pittsburgh Neighborhood Alliance, 2).

In 1904, Carrick was chartered as a borough. Its borough hall, built in 1905, stands at 1806 Brownsville Road. The 1905 Hopkins map shows extensive subdivision in the area (Plate 3). By this time, The Boulevard was largely built out with substantial brick houses. The first Roosevelt School was present at the southeastern corner of The Boulevard and Holly (now Highnote) Way. The current school building was constructed in the 1950s, but has been replaced by a newer school on Cherryhill Street.

Plate 3: Detail of Carrick (G.M. Hopkins & Co., 1905).

Carrick’s other elementary school, Concord, currently occupies its fifth location in the neighborhood. The Concord School was founded in 1840 in a room at the rear of the Concord Church. A second school building, also with one room, was located on the other side of Brownsville Road. The third, four-room Concord School was located on what is now East Agnew Avenue; this was used until the establishment of the Borough of Carrick in 1905, at which time a large, two-story masonry school building was constructed on Carrick Avenue. In 1927, the Concord School came under the jurisdiction of the Pittsburgh Board of Education, which constructed the present school building at Brownsville Road and Biscayne Drive in 1939.

Carrick High School was also originally housed in the Concord Church. The Art Deco style building near Phillips Park which, with additions, opened in 1924 and continues to serve as Carrick High School.

In addition to the Concord Church, the borough supported several other houses of worship. Of the three Catholic churches, St. Wendelin's, founded in 1873 and with a sanctuary built in 1896, was the first. Due to its location near the Baldwin line, far from families living near upper Brownsville Road, those families petitioned the Bishop of Pittsburgh to found a new parish in 1906. St. Basil's was originally located on Cherryhill Street on the site of the current Roosevelt School and was built at its present location in 1907. St. Pius X Byzantine Catholic Church was built in 1974. Both St. Wendelin's and St. Basil's had associated parochial schools which still stand.

The Evangelical Lutheran Church of the Redeemer was constructed in 1904. The Spencer United Methodist Church and Zion Christian Church (originally Bethel Baptist Church) were both built in 1926. The Stewart Avenue Lutheran Church was built in phases beginning in the 1920s and resuming after the Great Depression and World War II; it was completed in the 1959. The Birmingham Church of Christ was built on Carrick Avenue in 1951. The neighborhood also contains a convent, the Passionist Sisters, which was built at Churchview and Stewart avenues in 1910 (with later additions). Aside from the cloister, this contains a bakery facility where nuns make the hosts for Pittsburgh Diocesan churches (Carrick-Overbrook Historical Society, "Passionist Convent").

Carrick enjoyed extensive open space in the form of five cemeteries adjacent to or near Brownsville Road. From north to south, these are: St. Joseph's, St. George's, South Side, St. Adalbert, and the German Evangelical (now Birmingham) Cemetery. Four more cemeteries were established at the lower end of Stewart Avenue: the Gates of Wisdom (Shaare Torah Congregation), Shaare Zedec, and Beth Abraham Jewish cemeteries (which are located adjacent to each other) and St. George's, which is a Serbian Orthodox cemetery associated with Holy Trinity Parish. A public park was established in Carrick in 1904. Originally known as Dilly's Grove and part of the Coffey estate, it was originally a "traction park," built to attract riders to the end of the Castle Shannon trolley line. It was also known as the Southern Avenue Recreation Park and Carrick Park before being rededicated as Phillips Park in 1914, after John M. Phillips donated trees and a swimming pool.

Trolley car barns were located on Amanda Avenue between Wynoka Street and Laughlin Avenue and below street level on Brownsville Road opposite Churchview Avenue.

In 1927, Carrick was annexed to the City of Pittsburgh, becoming the 29th Ward. Much of the neighborhood had been built out by this time, but there were still some small farms on its hillsides through the middle of the twentieth century. In a final wave of development, from the end of World War II through the 1960s, most of this remaining open land was sold and subdivided for developments of Cape Cod, ranch, and split-level style housing.

PreservePGH notes, "There are not large concentrations [in Carrick] of historic resources that would qualify for eligibility as historic districts, so preservation should focus on individual structures and groups of structures that serve as significant character-defining elements of Sector 5. Many homes have been sold by their first-generation owners and converted to rental properties; the high rate of rental occupancy is a threat to maintenance of historic structures.... The commercial district along Brownsville Road presents an opportunity for streetscape enhancement and historic preservation investment. The Boulevard is an example of a residential street that has significant late 19th century architecture and adds value to Carrick's historic character" (PreservePGH 66).

There are no National Register listed individual resources or historic districts in Carrick. The Concord School at 2340 Brownsville Road and the Wigman House at 1425 Brownsville Road are designated as City Historic Landmarks. In the 1980s, an attempt to designate The Boulevard as a City Historic District failed due to lack of support from residents and City officials (Carrick-Overbrook Historical Society, UHI).

The Pittsburgh Register of Historic Places, a historic resources survey conducted by the Historic Preservation Office of the Department of City Planning in 1992, identified a small segment of The Boulevard as a potential historic district (Plate 4) and the following individually significant buildings, structures, and sites:

1135 Brownsville Rd. (Duquesne Light substation, 1925)
1404 Brownsville Rd. (house, 1870s)
1630 Brownsville Rd. (house, 1900s)
1735 Brownsville Rd, (St. Basil Roman Catholic Church, Lang & Herman, 1922-23)
2230 Brownsville Rd. (personal care facility, 1900s)
2314 Brownsville Rd. (house, 1910s)
2316 Brownsville Rd. (house, 1910s)
2522 Brownsville Rd. (house, 1870s)
2806 Brownsville Rd. (Stewart Avenue Lutheran Church, 1920s)
2727 Churchview Ave.(house, 1900s)
351 Copperfield Ave.(house, 1870s)
363 Copperfield Ave. (house, 1870s)
2400 Fairhope St. (house, 1870s)
1814 Fairland St. (house, 1870s)
101 Hornaday Rd. (house, 1920s)
102 Linnview Ave. (house, 1910s)
144 Madeline St. (house, 1870s)
149 Merritt Ave. (house, 1800s)
26-30 Merritt Ave. (rowhouses,1890s)
1509 Nobles Lane (house, 1870s)
1920 Plateau St. (house, 1880s)
163 Stewart Ave. (house, 1860s)
218 Sunnyland Ave. (house, 1870s)
115 W. Cherryhill St. (house, 1890s)
1822 Westmont Ave.(house, 1880s)
1900 Westmont Ave. (house, 1870s)
15 Wynoka St. (house, 1900s)

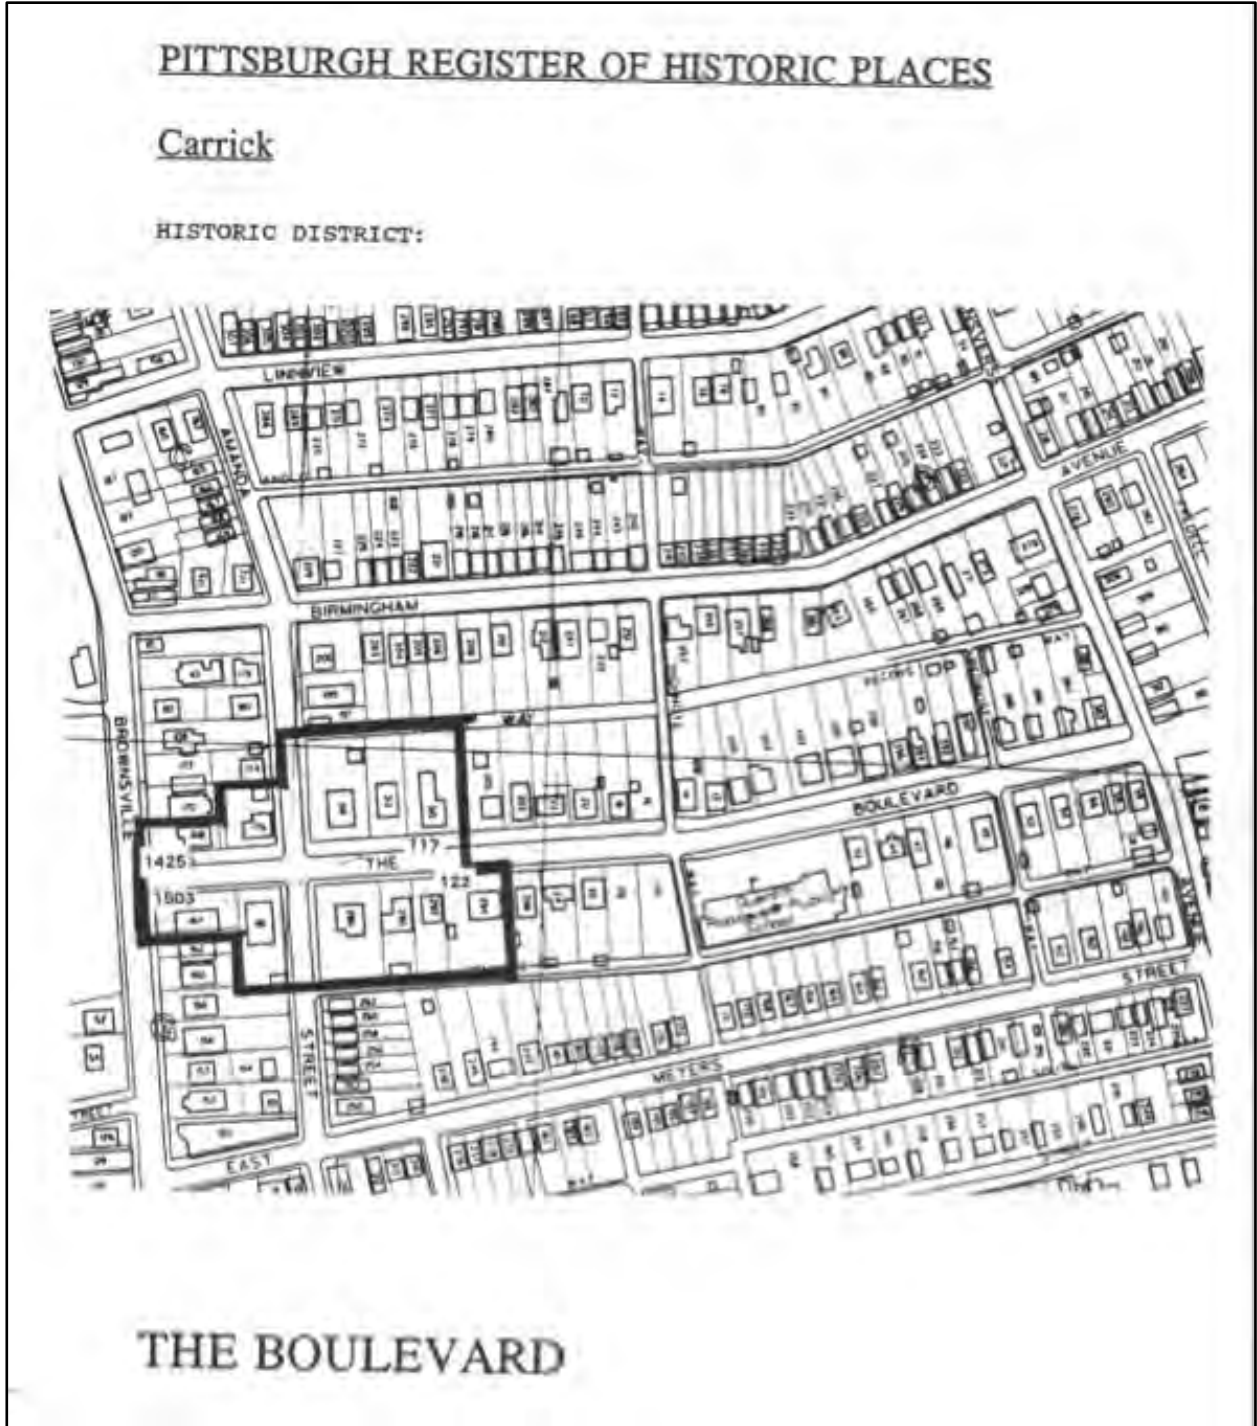

Plate 4: Potential Boulevard Historic District identified in 192 City Planning survey.

Results

Summary of Findings

Due to its size, a building-by-building survey of the entire neighborhood of Carrick was not possible within the constraints of this project. Project historians surveyed all of Brownsville Road and select other areas representing a variety of periods in Carrick's history and development. All 68 previously-recorded resources were also checked and updated. In total 1,662 properties were surveyed, including four cemeteries at the foot of Stewart Avenue that are just outside Carrick's neighborhood boundary. These cemeteries were surveyed because they were included in the Carrick dataset provide by the City GIS Department.

This survey found a relatively intact, predominantly residential neighborhood with evidence of scattered development beginning in the mid-nineteenth century, but concentrated in the years between about 1900-1920. Significant development continued through the early 1960s, resulting in a diverse array of building typologies. Instead of a neighborhood center, Brownsville Road is the neighborhood's commercial corridor as well as the address of many of its civic and religious landmarks. Carrick does not have a consistent character throughout. Rather, it appears as a collection of smaller sub-neighborhoods, defined by topography and chronology and linked by their connection to Brownsville Road.

Carrick has experienced relatively little demolition but a great deal of alteration of original building fabric. By far, properties with medium integrity predominate; there were 1,199 surveyed properties with medium integrity versus 99 properties with high integrity and 287 properties with low integrity. Properties with high, medium, and low integrity appear relatively evenly dispersed throughout the neighborhood (Appendix B, Figures 4-5).

These data do not support the establishment of a neighborhood-wide historic district in Carrick. Rather, they suggest the consideration of one or more potential smaller historic districts and/or neighborhood conservation districts consisting of defined areas exhibiting high integrity and internal consistency.

Potentially significant individual resources throughout the survey area are displayed in Appendix C, Table 2. The location of previously surveyed resources is shown in Appendix B, Figures 2-3 and previously surveyed resource data are summarized in Appendix C, Table 3. Appendix C, Table 7 lists all newly surveyed resources.

Types of Properties

Carrick is a predominantly residential neighborhood roughly bisected by Brownsville Road, which runs along its ridge and connects the neighborhood to older city areas to the north and newer suburbs to the south. Brownsville Road serves as the spine of Carrick, containing most of its commercial properties along with many religious and civic ones. A long period of development, beginning in the late nineteenth century and extending to about the 1960s, has resulted in a mix of pedestrian- and auto-oriented building

types along Brownsville Road. Most storefronts are built to the sidewalk in traditional, two- to four-story commercial buildings with apartments or offices above, but there are also some one-story, stand-alone commercial properties and shopping centers set back behind parking lots. The Colteryahn Dairy complex, which was established in 1917 and occupies most of the block of Brownsville Road between W. Meyers Street and Thielman Avenue, is an unusual property combining industrial and retail uses. Other than this, there is little industry in the neighborhood.

A few of the old hotels that once accommodated travelers during the pre-streetcar era are still present on Brownsville Road, albeit behind new facades: the Buck Hotel (now the South Hills Italian Club) at number 1038, the Carrick Hotel (now an apartment building) at 1800-1804, and the Globe Hotel at 2516. Next to the former Carrick Hotel, at 1806 Brownsville Road, the former Carrick Borough Hall still stands, a reminder of the 20-year period when the neighborhood functioned as an independent municipality.

Residential properties are also interspersed along Brownsville Road, including some substantial single-family houses and apartment buildings and complexes. At 2531-2939 Brownsville Road, "The Brentshire," a complex of three three-story apartment buildings and a row of attached houses, including an integral caretaker's cottage and garages, is especially notable for its design and integrity. This property is currently abandoned and at risk. In addition to purpose-built residential properties, in recent years, some former storefronts on Brownsville Road have been converted to apartment use.

Beyond Brownsville Road, Carrick's development patterns were influenced by both the streetcar and the automobile. Streetcar-era sections of the neighborhood have walkable, relatively densely-developed grids of streets directly connected to Brownsville Road, while automobile-era sections consist of more curvilinear streets of generally smaller houses on larger lots with driveways and integral garages. Carrick's residential streets are laid out over its exceptionally steep, hilly topography. Many are still paved in brick and afford sweeping views of Pittsburgh and adjacent boroughs. At the bottoms of the hills are small clusters of houses in secluded settings that have an almost rural feel. Both uphill and down, a large number of cemeteries contributes to the overall character of Carrick and provides relief from its residential density. Carrick's one park, Phillips Park, is also built on a hillside and so shares the neighborhood's characteristic of steepness.

The single-family house is the dominant building type in Carrick. Some examples of pre-Civil War houses are extant, though most have been drastically altered. A notable exception is the Federal Style house at 25 Nobles Lane. A scattered few Victorian-era houses in the Italianate, Second Empire, and Queen Anne styles are present. A period of intensive development between about 1900 and 1920 has resulted in a large collection of one-and-a-half to two-and-a-half story houses in the Colonial Revival, Craftsman, and Bungalow styles. The finest of these are found along The Boulevard and Hornaday Road; there is also an exceptional pair of Craftsman Style houses at 2314 and 2316 Brownsville Road. In slightly later houses of the 1930s, the overlap between Craftsman and pre-industrial revival styles, such as Colonial Revival and Tudor Revival, is evident. Bungalow/Craftsman was the most commonly encountered style with 345 examples surveyed. Second was Colonial Revival with 245 examples, and third was Tudor Revival, with 42 examples. About a dozen other building styles were encountered, ranging from Mission/Spanish Revival to Art Deco and International Style, but most of these styles were represented by only a handful

of examples. Five hundred thirteen (513) properties were categorized as “No Style,” which means that a building was constructed with no specific stylistic articulation or that evidence of original stylistic articulation has been obliterated by subsequent alterations. Appendix B, Figures 8-9 map the occurrence of the four most common building styles of surveyed properties in Carrick.

Carrick also contains many blocks of houses from the 1940s to the 1960s. These include a rich array of housing types from that era, including ranch houses, split levels, Cape Cods, and compact one- and two-story houses with integral garages, front stoops, and/or patios. Raleigh Square, a housing plan laid out in 1929 but for the most part not built until after the Great Depression, is a particularly well-designed and intact example of Carrick’s mid-twentieth-century development.

Brick and stone church buildings of various denominations are found on Brownsville Road and throughout Carrick. Like the neighborhood’s commercial and residential properties, the churches were built over a long period, with the oldest, St. Wendelin, dating from 1896 and the newest, St. Pius X, from 1974 (although the Concord Church was the earliest founded, its current building dates from 1914). St. Wendelin and St. Basil are associated with parochial school buildings. The neighborhood also includes a convent on the aptly-named Churchview Avenue.

Carrick contains three public schools from its historic period of development and one newer school. Concord Elementary School, at the intersection of Brownsville Road and Biscayne Drive, is a well-preserved example of the educational architecture of Marion Steen, who served as the in-house architect for the Pittsburgh Board of Education from 1935-1954. Carrick High School’s original Art Deco facility from 1924 currently co-exists with several later additions. On The Boulevard, the 1950s Quentin Roosevelt Elementary School is closed. A new Roosevelt Elementary School building stands on Cherryhill Street.

Integrity and Condition

Overall, the historic neighborhood fabric of Carrick is fairly intact. There has been little demolition of resources from the nineteenth and early twentieth centuries, and because development in this neighborhood extended into the 1940s, 50s, and 60s, resources from the mid-twentieth century do not stand out as intrusions. Due to these factors, the surveyed areas of Carrick retain good integrity of feeling and association as a predominantly residential community served by access—first via streetcar, then via automobile—along Brownsville Road.

Integrity of materials, design, and workmanship are not as strong. Almost all properties in Carrick have been altered in some way, most prevalently through the loss of original ornamentation and/or the alteration of original openings and/or porches. Additions that alter massing are present in the survey area but are less common due to the tight siting of many properties. Individual resources whose original materials, design, and workmanship have been maintained or restored are rare. The era of most of these alterations appears to be ca. 1950 to the present.

Recommendations & Conclusions

Because this survey was designed to serve both the City of Pittsburgh and the PA SHPO, recommendations have been formulated for potential National Register eligibility evaluations and for the use of survey data under the City of Pittsburgh's historic preservation ordinance. We also bear in mind that successful historic preservation may take place independent of formal designation. Other recommendations pertain to properties meriting intensive level study, and the overall methodology of this survey effort, in general.

Eligibility of Resources for National Register and City Listing

The National Park Service defines a district as a type of resource that “possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development” (*National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, 2002). The City of Pittsburgh Cultural Heritage Plan asserts, “There are not large concentrations of historic resources that would qualify for eligibility as historic districts, so preservation should focus on individual structures and groups of structures that serve as significant character-defining elements of Sector 5.”

This survey did not find the neighborhood of Carrick as whole to possess the qualities necessary for eligibility as a single, contiguous historic district. We did, however, identify some areas with potential significance and integrity to become historic districts in accordance with the Cultural Heritage Plan's recommended “opportunity” for Sector 5:

“Identify boundaries for portions of Sector 5 that have a distinct character of 19th and 20th century architecture. Focus preservation efforts in these areas, including zoning policies that address building facade aesthetics and traditional neighborhood design.”

One such area is The Boulevard, on which Carrick's largest, most elaborately-designed homes are located. A previous (ca. 1990) attempt to gain City Historic Designation for The Boulevard failed due to lack of support from property owners and city officials. Yet a segment of The Boulevard was recommend for historic district designation in the City's 1991 inventory and, 25 years later, this still has the most readily understood characteristics of a historic district: recognizably old and architecturally-distinctive houses. When describing this project to residents of Carrick, the survey team was repeatedly directed to visit The Boulevard to find locally-significant historic buildings. For this reason, The Boulevard might be a strategic place to introduce the concept of historic designation to Carrick. Proposed boundaries for The Boulevard Historic District are shown in Appendix B, Figure 12 and its resources are summarized in Appendix C, Table 6. There are 16 contributing properties within the district, including 15 buildings and a brick street (note that the carriage house at 1504 Amanda Street is not counted separately from its associated dwelling at 100 The Boulevard).

Hornaday Road is recommended as a potential National Register and City-designated historic district featuring Craftsman Style houses. While this style is found throughout Carrick, Hornaday Road presents the most intact concentration of the style. Since the City's Historic Preservation ordinance stipulates that

existing renovations on designated properties may be maintained in perpetuity, a high degree of integrity equates to the greatest preservation potential for a City-designated Historic District. Proposed boundaries for the Hornaday Road Historic District are shown in Appendix B, Figure 11 and its resources are summarized in Appendix C, Table 5. There are 36 contributing properties within the district, including 35 buildings and a brick street, as well as one non-contributing building from ca 1970.

The project team also looked at identifying a historic district that would be representative of Carrick's post-World War II period of development. Raleigh Square stood out as a superb example of this era. Laid out on the former Semmelrock orchard in 1929 but, due to the Great Depression, not fully built out until the 1940s, Raleigh Square contains houses whose original design and current integrity suggest eligibility as a historic district of post-war, suburban-style infill development. The houses of Almont Street, in particular, show a high degree of design and articulation. We recommend Raleigh Square be determined eligible for the National Register of Historic Places. Whether there is local support for designating this area as a City Historic District might be explored as well. Proposed boundaries for the Raleigh Square Historic District are shown in Appendix B, Figure 10 and its resources are summarized in Appendix C, Table 4. There are 133 contributing buildings within the proposed district.

Brownsville Road is recommended for study as a potential Neighborhood Conservation District due to its eclectic character, variable integrity, and importance to the neighborhood. The City does not currently have legislation permitting the designation or administration of Neighborhood Conservation Districts, but is considering the concept for potential future implementation. If Conservation Districts were to be enabled through City ordinance, protections within such districts would entail design review of all proposed new construction (of a pre-established size or percentage) and review of all proposed demolition. These activities presumably would be reviewed by the City's Historic Review Commission. Such review would serve to reinforce Brownsville Road's existing character without imposing detailed review of individual changes to building materials or design.

Consideration of Brownsville Road as a potential Neighborhood Conservation District is in agreement with the Cultural Heritage Plan's recommended "opportunity" for Sector 5:

"Encourage streetscape improvements and historic rehabilitation projects in the Carrick commercial core (Brownsville Avenue [sic])."

- 1. Recommend that The Boulevard and Hornaday Road be supported as City-designated Historic Districts.**
- 2. Recommend that a determination of eligibility for the National Register be sought for The Boulevard, Hornaday Road and Raleigh Square.**
- 3. Recommend that Brownsville Road be supported for designation as a City of Pittsburgh Neighborhood Conservation District, if that type of zoning overlay were to be enabled in Pittsburgh.**

Intensive Level Survey Recommendations

All of the resources in Appendix C, Table 2, “Potential Individually Eligible Resources,” are recommended for further study or intensive-level survey. Based on appearance and available background information, these resources have the potential to be eligible for listing in the National Register of Historic Places and/or as individually-designated City Historic Landmarks. It should be noted that Concord Elementary School (SHPO Key No. 007504) was determined not eligible for the National Register of Historic Places in 1985; however, the present survey recommends a reconsideration of that determination, as the building has a high level of integrity and appears to be a significant example of architect Marion M. Steen’s work. The building is a potential contributor to the Pittsburgh Public Schools Thematic Group National Register historic district

- 4. Recommend resources identified in Table 2, “Potential Individually Eligible Resources” for Intensive-Level survey.***
- 5. Recommend resources identified in Table 2, “Potential Individually Eligible Resources,” with pre-existing Intensive-Level documentation, to be determined eligible for listing in the National Register of Historic Places.***

Use of Survey Data by City of Pittsburgh

Eligibility for the National Register is not determinative of eligibility for City historic designation. Moreover, it is not the policy or practice of the City of Pittsburgh to initiate nominations for city historic designation (or, presumably, future Neighborhood Conservation District designation), but rather to evaluate and act upon nominations submitted by community members, organizations, and leaders. Therefore, recommendations for use of survey data by the City of Pittsburgh pertain to the Historic Review Commission’s responsibilities under the City of Pittsburgh Historic Preservation Ordinance, §1101.07(b), to:

- Carry on educational activities in furtherance of the purpose of [the Historic Preservation Ordinance];
- Act in an advisory role to City departments and agencies related to preservation matters;
- Act as a catalyst to expedite the flow of projects through departments and agencies;
- Facilitate the redevelopment of historic structures and districts in accordance with approved development plans of the city;
- Act as liaison on behalf of the City with preservation organizations, professional societies, community and other groups, private property owners, and interested citizens, concerning conservation of the historic resources of the city;
- Act as a liaison on behalf of the City with the State Historic Preservation Officer, agencies of the federal government, the National Advisory Council on Historic Preservation, and the National Trust for Historic Preservation, concerning the historic resources of the city;
- Prepare plans for the conservation and development of historic resources;

- Undertake or encourage and facilitate the documentation of the architecture and history of the City's historic resources.

In furtherance of these goals, it is understood that the Department of City Planning intends to fully integrate the list of Potential Individually Eligible Resources and other survey data into its Geographic Information Systems (GIS), so that it may serve as a tool in all aspects of implementing the City of Pittsburgh's comprehensive plan. In Carrick, which does not have a tradition of historic preservation or an established identity as a location of historic resources, this will be important to highlight those potentially eligible resources until such time as any formal efforts are organized to maintain and preserve them.

In order to keep Architectural Inventory survey data up to date, it is recommended that the Department of City Planning coordinate with other city and county agencies to obtain and periodically update the Architectural Inventory database with information related to building construction or demolition. For example, on a regular basis data related to building demolitions and construction could be cross referenced with data from the Bureau of Building Inspection and Allegheny County Assessor. Such interim data updates could utilize City Planning interns and would not typically require field checking.

As City Planning completes surveys of Pittsburgh neighborhoods, it is recommended that the survey data be shared with other community stakeholders and the PA SHPO to ensure its long-term preservation. An electronic database file (such as Microsoft Access) could be created with essential building attribute fields and photographs and should be saved on disk. A second file should be created in PDF format to ensure accessibility as computer programs and file compatibility change over time. Ideally, at least two paper copies of the survey data should be made. One paper copy would be kept in the City of Pittsburgh Archives and the other would be curated at a local independent archive. Possible community partners for data sharing are the Pittsburgh History and Landmarks Foundation, the Pennsylvania Department of the Carnegie Library of Pittsburgh, the Archives of Industrial Society at the University of Pittsburgh, the Architectural Archives at Carnegie Mellon University, and the archives maintained by Preservation Pittsburgh. A Carrick-specific entity which should receive a copy of the data for this survey is the Carrick-Overbrook Historical Society.

- 3. Recommend the Architectural Inventory survey data, which has been incorporated into the City's GIS, be utilized while planning for the city, and when implementing aspects of the comprehensive plan.***
- 4. It is recommended that Pittsburgh Department of City Planning develop best practices to keep the database and GIS files relevant and useful in the long term and ensure its archival stability.***

It is also recommended that the Department of City Planning, through its Historic Review Commission, Historic Preservation Planner, and relevant Neighborhood Planner, continue the practice—piloted in Sector 1—of sharing survey results with the survey community in a meeting. In areas which have not traditionally had a strong culture of preservation awareness or action, including Carrick, the purpose will

be to start a conversation about historic preservation in the surveyed community. In areas with established historic districts, the conversation may continue at a higher level about expansion of current preservation activities. Meetings should include a variety of stakeholders, including local community groups, preservation organizations, and residents and property owners, as well as Historic Review Commission representative(s), city officials, and PA SHPO staff. Ideally, the survey area’s City Council representative would host the meeting at a location within the survey area. A typical meeting agenda might be:

- Introductory presentation about the benefits historic preservation (for “new” communities) or the accomplishments of historic preservation to date (for “experienced” communities);
- Summary overview of historic preservation tools and practices (National Register, local designation, tax credits, etc.);
- Description of survey activity and presentation of results in that neighborhood or sector;
- Discussion of how City will use data and possibilities for how the community might use it;
- Question and answer.

5. Recommend the results of the Architectural Inventory and survey data be shared with subject neighborhoods at a neighborhood or district meeting.

Methodology of the Project

Within the confines of the current project, surveyors gathered data on 68 previously-surveyed resources and 1,594 newly surveyed resources (see Table 1, below, for estimates of survey completion; Appendix C, Table 7 for a list of newly surveyed resources).

Table 1: Survey Completion			
	Surveyed Parcels to Date (Architectural Inventory Phases 1-4)	# Parcels City-wide	% Complete City-wide
Not Previously Surveyed	5,759	139,375	4.1%
Previously Surveyed	593*	13,385	4.4%
Total	6,352*	152,760	4.2%
* Previously Surveyed refers to parcels surveyed prior to the commencement of the Pittsburgh Architectural Inventory. This number excludes 53 previously surveyed resources in Sector 1 whose tax parcels have been abolished.			

Surveyed Properties

The survey of Carrick is the fourth phase of an on-line, tablet-based data collection method piloted in City Planning Sector 1 and in the neighborhood of Larimer. Over the course of these efforts, several previously-

identified issues with methodology have been resolved, while the survey team has adapted to others which are inherent to the project. For example, the survey team in this phase agreed to save time by collecting less than a full record for resources exhibiting low integrity: only the integrity and current use fields were entered for these resources, and a photograph was taken. The limited battery life of each tablet continued to require that the survey team be equipped with two tablets per surveyor for each eight-hour day in the field. Poor wireless coverage, which impeded the team's ability to save and update data in some areas of Sector 1, was seldom a problem in Carrick, but could still affect future survey efforts in other neighborhoods.

Persistent problems with survey methodology mostly pertain to gaps between data collection in the field and its accurate representation in tables and maps, which need to be created afterward in the office.

Because mapping is generated on the basis of tax parcels, it cannot represent all of the data collected in the field, for example: multiple addresses and/or multiple uses per parcel, and/or multiple uses in a single building, complex, or group of related buildings. Because this was a historic resources survey, our field recordation focused on pre-1975 buildings, but some sites contained a mixture of historic and modern-era buildings. In these cases, only the historic data are represented on the maps. A second "Use" field would allow the collection of more complete data, but would not solve the issue of overly-simplistic mapping.

The decision to record less than the full set of data for low-integrity properties also has ramifications for mapping. Maps based on characteristics such as style or date of construction will not depict these properties, since that information was not collected for them.

The presence of many mid-twentieth century resources in the Carrick survey area also presented challenges for accurate, meaningful data collection. The electronic survey form was designed to utilize the PHMC style categories standard to that agency's historic resource survey methods. This is reasonable, since a goal of the survey is to collect data that can be electronically uploaded to the state's CRGIS database. However, those style categories do not reflect the variety of mid-twentieth century housing designs found in Carrick. As a result, most houses from this period were assigned a value of "Other" or "No style." This limited the survey team's ability to collect fully-detailed data on the buildings from an important period in Carrick's development. It is our understanding that PHMC is aware of this issue and plans to update its style list. For future surveys in advance of this, however, we recommend developing a methodology for recognizing common twentieth century building forms, styles, and idioms, either in the drop-down menus or (more clumsily) in the Comments field.

In this survey, a significant amount of office time continued to be devoted to manually assigning Key Numbers and Inventory Numbers to grouped or historically related resources (such as blocks of rowhouses, duplexes, or multi-unit commercial buildings) after the completion of field work. It is worth investigating possible methods of recording Inventory ID numbers in the field in order to minimize the amount of time spent in the office manually checking and entering data. The ideal situation would be to have all data fields completed in the field using tablets, with the exception of Historic District Potential, which would be completed in the office after integrity analysis and mapping are completed.

Appendix A: Attribute Fields – PA SHPO Minimum Survey Requirements

Attributes (parcel-by-parcel basis)

As per City of Pittsburgh: Checkboxes for the following categories:

- Potentially Eligible Individual
- Potentially Eligible District
- Vacant – Not Surveyed
- Post 1975 – Not Surveyed
- Integrity LOW – Not Surveyed
- Integrity MED – Surveyed
- Integrity HIGH - Surveyed

As per PA SHPO Minimum Record for CRGIS:

- Historic Name, or blank if there is none
- Resource Type (NR category)
 - Building
 - Site
 - Object
 - Structure
 - District
- Tax Parcel (if there is no address) (automatically populated)
- USGS Quad, UTM Zone, and or Lat/Long.
- Address (automatically populated)
- Municipality (automatically populated)
- County (automatically populated)
- Owner (public, private, or mixed)
 - Public
 - Private
 - Mixed
- Number of resources
- Style (as per “how to complete PHRS survey form”)
 - Colonial
 - Georgian
 - French Colonial
 - Spanish Colonial
 - Dutch Colonial
 - Postmedieval

- English
- Early Republican
 - Federal
 - Early Classical
 - Republican
- Mid-19TH Century
 - Greek revival
 - Gothic Revival
 - Italian Villa
 - Exotic Revival
- Late Victorian
 - Gothic
 - Italianate
 - Second Empire
 - Stick/Eastlake
 - Queen Anne
 - Shingle Style
 - Romanesque
 - Renaissance
 - Octagon Mode
- Late 19TH & 20TH Century Revivals
 - Colonial Revival
 - Classical Revival
 - Tudor Revival
 - Late Gothic Revival
 - Mission/Spanish
 - Beaux Arts
 - Italian Renaissance
 - French Renaissance
- Late 19TH & Early 20TH Century American Movements
 - Prairie School
 - Commercial Style
 - Chicago
 - Skyscraper
 - Bungalow/Craftsman
- Modern Movement
 - Moderne
 - International Style
 - Art Deco
- Other
- No Style
- Mixed
- Year Built 1 (circa dates okay) (may be available through the County Assessment data, though possibly not accurate)
- Year Built 2 (Additions/alterations)

- Exterior Materials (as per “how to complete PHRS survey form”) (need multiple choice – at least three)
 - Adobe
 - Aluminum
 - Asbestos
 - Asphalt
 - Brick
 - Bronze
 - Cast Iron
 - Ceramic tile
 - Cloth/Canvas
 - Concrete
 - Copper
