The Architectural Inventory for the City of Pittsburgh, Allegheny County, Pennsylvania, was made possible with funding provided by the Pennsylvania State Historic Preservation Office (PA SHPO), the City of Pittsburgh, and the U.S. Department of the Interior National Park Service Certified Local Government program.

The contents and opinions contained in this document do not necessarily reflect the views or policies of the Department of the Interior. This program receives federal financial assistance for identification and protection of historic properties. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, as amended, the U.S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, disability, or age in its federally assisted programs. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to: Office of Equal Opportunity, National Park Service; 1849 C Street N.W.; Washington, D.C. 20240.

Abstract

This architectural inventory for the City of Pittsburgh (Planning Sector 1: Spring Garden; Spring Hill-City View) is in partial fulfillment of Preserve Policy 1.2, to **Identify and Designate Additional Historic Structures, Districts, Sites, and Objects** (*City of Pittsburgh Cultural Heritage Plan, 2012*). This project is the second phase of a larger undertaking which aims to ultimately complete the architectural survey for all of Pittsburgh's Planning Sectors. The scope of this project provided for the partial completion of Planning Sector 1, including the entirety of the Spring Garden neighborhood and portions of the Spring Hill-City View neighborhoods. The part of East Allegheny located east of Interstate 279 (in Planning Sector 3) was also surveyed.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

All previously surveyed resources within Sector 1 were field checked in the first phase of the Pittsburgh Architectural Inventory (October 2014). Thus, phase two of the architectural inventory focused on the identification of as many previously unsurveyed historic resources within Sector 1 as possible. Previously surveyed resources within the East Allegheny neighborhood (Planning Sector 3) located east of Interstate 279 were field checked; this area, known as East Deutschtown, was previously surveyed in 1984 and determined eligible for listing in the National Register of Historic Places (CRGIS Key No. 77385). In 2008 the Pennsylvania State Historic Preservation Office reversed this eligibility determination because of loss of integrity from numerous demolitions. Because of City of Pittsburgh concerns about ongoing and further demolitions, including some tied to planned new development, East Deutschtown was prioritized for re-survey in the present effort.

Project historians surveyed the following resources:

PREVIOUSLY SURVEYED (*all with Sector 3, East Allegheny, East Deutschtown*)

- 238 Previously Surveyed Extant Resources
- 106 Previously Surveyed Resources – Now Demolished
 - 20 Previously Surveyed Resources – Post-1975.
- **344 TOTAL** Previously Surveyed Properties in East Deutschtown *Resurveyed*

NEWLY SURVEYED (Sector 1, Spring Garden and portions of Spring Hill-City View)

- 1,272 **TOTAL** Newly Surveyed Resources

TOTAL SURVEYED (Sectors 1 and 3)

- 1,616 **TOTAL** Resources

ELIGIBILITY RECOMMENDATIONS

- 0 Previously Surveyed Parcels – Potentially Individually Eligible for NRHP
 - 5 Newly Surveyed Parcels – Potentially Individually Eligible
-
- 5 **Potentially Eligible Resources** Recommended for Intensive Level Survey

This project was administered by the City of Pittsburgh with support from Pennsylvania State Historic Preservation Office staff. Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards* (36CFR61) for history and/or architectural history. Consulting firms include Michael Baker Jr., Inc., Clio Consulting, and Cosmos Technologies, Inc.

This project was funded in part by a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant, the program guidelines of which can be found at http://www.portal.state.pa.us/portal/server.pt/community/grants/3794/certified_local_government_grant_program/417950.

Introduction

In 2013, the City of Pittsburgh received a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant for partial funding of an architectural inventory of Pittsburgh neighborhoods. The first phase of the Pittsburgh Architectural Inventory focused on the Troy Hill Neighborhood and was completed in October 2014. The present survey (phase two of the Pittsburgh Architectural Inventory) focuses on the Spring Garden and Spring Hill-City View neighborhoods. The survey was conducted in August and September 2015, and the report was compiled in December 2015.

The City of Pittsburgh is divided into 16 planning sectors. Each sector contains a number of neighborhoods and is delineated based on a number of factors, including neighborhood and ward boundaries and topographical features. The City commenced its comprehensive architectural inventory with Planning Sector 1, Allegheny Hills, which contains five neighborhoods. The present survey effort concentrated on the neighborhoods of Spring Garden and Spring Hill-City View. After two weeks of survey work, project historians had surveyed 1,616 resources, of which 1,272 were newly surveyed and 342 were previously surveyed as part of the East Deutschtown Historic District (Figure 1, Appendix B). All pre-1976 properties with medium or high integrity were recorded using the PA SHPO minimum survey requirements (see Appendix A). Survey data were uploaded in real time to the City's Geographic Information Systems (GIS) database via tablet computers. These data were later re-formatted and transmitted to PA SHPO in a Microsoft Excel file in accordance with PA SHPO's Cultural Resource Geographic Information System (CRGIS) requirements.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

Qualifications

Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards (36CFR61)* for history and/or architectural history. Project historians included Jesse A. Belfast, of Michael Baker International, Inc., and Angelique Bamberg of Clio Consulting. Project maps and data tables were compiled by Suraj Shrestha, E.I.T., of Cosmos Technologies, Inc.

Goals and Objectives

In 2012, the City of Pittsburgh Department of City Planning released its Cultural Heritage Plan as a component of its first comprehensive plan. Resulting from the plan, the need to document was identified with the goal to:

Document the City’s cultural and historic resources in ways that are accurate, meaningful, comprehensive, and useful to the City and the general public.

The Cultural Heritage Plan noted that the Historic Resources Inventory should be a “dynamic, comprehensive list of the City’s historic resources.” Further, according to the plan, the existing inventory of historic resources (over 13,500 parcels identified as being historic on some level) “needs to be field checked and continually updated as physical conditions change and additional resources are listed in the National Register of Historic Places or designated under the City’s Historic Preservation Ordinance” (Cultural Heritage Plan, 112).

To realize these goals, the City prepared policies with corresponding action items in the historic preservation plan. This current field survey is in partial fulfillment of those items, including:

PRESERVE POLICY 1.2 - Identify and Designate Additional Historic Structures, Districts, Sites, and Objects

PRESERVE 1.2-A: Conduct a Citywide Reconnaissance Survey (cursory visual inspection).

Identify areas that are potentially eligible for new listings as City-Designated Historic Districts and National Register Historic Districts. Focus on areas that:

- Have been previously identified as potentially eligible (see Cultural Heritage Plan Appendix B).
- Have a high percentage of structurally-sound and architecturally significant pre-1940 buildings.

Identify individual structures and sites outside of City-Designated and National Register historic districts that are potentially eligible for individual nomination as a City-Designated historic resource and/or for listing in the National Register of Historic Places. Focus on structurally-sound resources that:

- Would not otherwise be part of an eligible historic district.
- Are significant or unique for their architecture and/or engineering.

- Would severely and adversely impact the neighborhood's form, character, or economic growth potential if demolished or negatively altered. (Consider existing and former schools, religious buildings, and civic or quasi-civic spaces such as libraries, parks, fire stations, community centers, etc.).

Therefore, this current survey effort represents the City's second effort to identify previously unsurveyed historic resources within Sector 1, in partial fulfillment of the above-mentioned goal. In addition the City intends to use this project to further develop and refine the methodology for conducting architectural surveys that was used in the first phase of the Pittsburgh Architectural Inventory (October 2014).

Methodology

Background Research

Prior to initiating fieldwork, the project team conducted background research and reviewed published literature to identify and obtain sources of information pertinent to the history and architecture of the Spring Garden and Spring Hill-City View neighborhoods. A review of existing Pittsburgh history texts helped to predict the types of properties that should be expected in the survey area; historic mapping illustrated patterns of development and periods of growth in the neighborhoods.

Reconnaissance Survey

The survey consultants, in consultation with the City and PA SHPO determined that scattered properties should be surveyed which were of historic age (pre-1976) and retained enough integrity to be considered a “contributor” to a potential district (i.e. medium level of integrity or higher), in an effort to understand the overall character of a neighborhood. It was also decided that in areas which could potentially be eligible for listing in the National Register as districts, a building-by-building survey would still be necessary. If building parcels were not old enough, vacant, or had no integrity, then the surveyor could check the respective box on the tablet indicating why the PA SHPO minimum requirements were not filled in for that resource. For buildings with low integrity, a photograph was taken and only the data field for current use was completed. Once the survey effort began, the survey consultants decided to photograph all non-vacant parcels (i.e. those with building, structures, or landscape features such as parking lots or gardens) regardless of integrity, in areas that had historic district potential because it required minimal effort when the surveyor was entering information on integrity anyway; moreover the photographs enabled project historians to review the condition and integrity assessments after the fieldwork was completed in order to assure consistency in integrity assessments among surveyors. Such additional photographic data provide an overall view of an area’s integrity and the nature of intrusions in a potential historic district. In the future, this photographic documentation will provide a complete snapshot of a particular area and be a rich source of archival data to document change over time in Pittsburgh’s neighborhoods.

The survey team consisted of two architectural historians who spent approximately two weeks in the field with tablet computers. The tablets were pre-programmed with county property parcel maps and a fillable database of attribute fields developed by the project team to satisfy CRGIS database requirements (see Appendix A).

The number of hours allotted for fieldwork allowed the survey team to conduct a complete building-by-building survey of Spring Garden and a partial survey of Spring Hill-City View and to field check and update previously-identified resources in the East Deutschtown section of East Allegheny in Sector 3. There was not sufficient time to conduct a building-by-building survey of the other Sector 1 neighborhoods of Northview Heights and Summer Hill.

Members of the survey team found it critical to establish consistency in the use of certain fields at the beginning of the survey. Use of the following fields is explained:

- **Potential Individual Eligibility:** “Yes” was entered for all properties which had been identified as significant or potentially significant in any previous survey. Surveyors also entered “Yes” for a select few properties discovered through background research to have been significant in the historical context of the community (e.g. the Teutonia Mannerchor and Evangelische Imanuel’s Kirche) and for properties whose architecture stood out (such as the J. Klemm House at 866 Phineas Street), suggesting that further research on their history was warranted.
- **Potential District Eligibility:** Since potential historic districts were not defined prior to the survey, the entire Spring Garden and Spring Hill-City View neighborhoods were considered to be potential historic districts for the purposes of the survey. Therefore, additional information (i.e. photographs were gathered for post-1975 resources and those with containing landscape features (e.g. parking lots or gardens). Analysis of potential district boundaries was done after the field survey was completed and integrity maps of the surveyed areas had been generated. Therefore, use of the Potential District Eligibility field was not used to identify resources that might contribute to a neighborhood-wide district. Instead this field was marked “Yes” only for smaller groupings of historic resources that were deemed in the field to have potential historic or architectural significance. Entering “No” in the potential district eligibility field was reserved for resources with low integrity (unless special circumstances applied, e.g. a property with low integrity that was obviously a part of a related row or group, whose original characteristics could be gleaned from better-intact examples) and for resources outside of a potential district’s likely period of significance.
- **Integrity:** For this field, broad categories of “High,” “Medium,” and “Low” were utilized. Resources in the survey area were judged to have some integrity if, despite some alterations, their original character was discernable. A property which had artificial siding but all original trim, windows, and doors intact might be given a rating of “High.” “Medium” was assigned to those which exhibited artificial siding and replacement windows and/or doors, but which retained their original size, scale, rhythm and proportion of openings, and possibly some original ornamentation. “Low” was used for properties with drastically altered facades and/or massing, such that their original character had been obscured.
- **Style:** Correspondingly, where a resource’s original style was evident in its massing, extant detail (such as brackets), and/or characteristic feature (such as mansard roof), that style was entered in this field. Resources with low integrity, where no such clue

as to original style remained, were assigned a value of “No Style,” even if context suggested a specific era of construction.

- Vacant parcels and properties constructed post-1975 were noted with a “Yes” in those fields. Additional fields and photographs were not taken for vacant properties. For post-1975 properties, photographs were taken and the current function was recorded. Parcels that were not occupied by a structure but that were in use (such as parking lots, parks, and gardens), were not defined as “vacant,” but entered as “sites” and assigned a relevant function from the CRGIS-supplied drop-down list; such sites were also photographed.
- The “Year Built” fields were entered in the field and were estimated based on materials, method of construction, style, and context.
- The “Comments” field was used by surveyors to records any additional features of note and for noting grouped resources (i.e. double houses, blocks of identical row houses, or resources that are otherwise historically related). Project historians also used the Comments field to note local property types deemed to be of special interest. In the survey area, such building types included canal era (ca. 1830-1850) houses and one-story cottages.

Database Management

Once the reconnaissance survey was complete, the City GIS department uploaded the results from the platform software to Microsoft Excel. Spreadsheet data were reviewed for accuracy and completeness. Five resources with PA SHPO Key Numbers were entered manually in the spreadsheet manually because of these resources were updated in the CRGIS database in June 2015 and not yet reflected in City’s GIS historic resources database. PA SHPO Key Numbers and Inventory ID numbers were manually entered for all 1,616 surveyed resources. After the Excel File was complete, it was used to generate mapping (Appendix B), and tables (Appendix C). The Excel File was sent back to the City for re-upload into the City’s GIS system so that the City would have the most accurate and complete data from the survey. The GIS data concluded the deliverable for the City to incorporate into its Historic Resources Inventory.

PA SHPO required a slightly modified spreadsheet to update its CRGIS database. A copy of the City’s database spreadsheet was modified by removing irrelevant data fields, by reformatting column headings to use CRGIS naming conventions, and by adding primary (i.e. common) Inventory ID records for grouped resources that share a key number. Typical examples of grouped resources are a block of identical row houses or a double house. Information included in the primary record for the resource group included such fields as an address range, architectural styles, and materials. For grouped resources, the primary Inventory ID number consists of the CRGIS Key Number plus the suffix .0001, and related resources are numbered sequentially beginning with the suffix .0002. Thus, for a grouped

resource with Key Number 123456, the primary record's Inventory ID would be 123456.0001 and the first related resource's Inventory ID would be 123456.0002.

Historical Context/Background History

Introduction

Planning Sector 1 lies east of the Parkway North (I-279) on Pittsburgh's North Side and extends to the City's northernmost reaches. It is composed of the neighborhoods of Troy Hill, Spring Hill-City View, Spring Garden, Northview Heights, and Summer Hill. With the exception of lower Troy Hill, which occupies the flat plain along the banks of the Allegheny River, and Spring Garden, which lies in a valley, these are hilltop neighborhoods. They are primarily residential in character and become progressively less dense from south to north, in accordance with changing development patterns as Allegheny City (and, after 1907, the City of Pittsburgh) expanded outward. In Troy Hill, Spring Hill-City View, and Spring Garden, homes typically date from the nineteenth and early twentieth centuries and are sited close together on narrow lots. As the City's Cultural Heritage Plan notes, "Homes on some of the streets have been extensively altered; as such, historic integrity is an issue for these neighborhoods." (Cultural Heritage Plan, "Resource Distribution: Sector 1") Spring Hill-City View, Northview Heights and Summer Hill display examples of post-World War II housing styles, both publicly and privately built.

Like the rest of the North Side, Sector 1 was formed from the "Reserve Tract" of 3,000 acres set aside by the Supreme Executive Council of Pennsylvania in March 1783 to be sold for raising revenue to pay troops who had served the Commonwealth in the war for American independence. The tract included all of the land north of the Allegheny and Ohio rivers between the mouth of Woods Run on the west, that of Girty's Run on the east, and an irregular line connecting the points where the two creeks flowed into the rivers on the north (Canning).

The first American landowner in the Reserve Tract was Captain George Wallace, who had been appointed by Benjamin Franklin as the first Common Pleas Court Judge in the newly formed Allegheny County. In the 1780s and 90s, Wallace purchased several hundreds of acres of forested land stretching from the present-day East Street valley to the border of Millvale. He was followed by Heinrich Richenbach Sr., a native of the Basel region of Switzerland who first arrived in Allegheny Town in 1808. Richenbach's acquisition of property along the north bank of the Allegheny, near the present location of the 16th Street Bridge, proved critical in shaping the future Germanic character near Troy Hill, Spring Hill, and Spring Garden.

Upon Richenbach's return to Switzerland several years later, he convinced his family, which included the family of Nicholas Voegtly Sr., to migrate to America. In 1823 the Voegtly and Richenbach families bought a 161-acre piece of property, extending from the river up the hillside, from the estate of James O'Hara. Their property was just east of the existing German neighborhood on Allegheny's east side (Lowry).

These Swiss families developed cotton mills in the area, and job markets created by their investments encouraged German-speaking immigrants to settle on or near their property (Canning). The neighborhood in the vicinity of Voegtly and Rickenbach Streets became known as the Schweizer Loch, or

“Swiss Hole,” owing to its lowland location. It is important to note that at the time most of the German-speaking immigrants in western Pennsylvania arrived, modern Germany did not yet exist; the German-speaking lands of Europe consisted of several smaller countries that were not politically unified, as well as parts of the Austro-Hungarian empire. Therefore, to refer to the communities of Sector 1 as “German” is really to define them by a shared language, when their residents came from many different homelands (Shaughnessy, 7).

During the mid-nineteenth century, the town of Allegheny – laid out as a farming village in 1783 and incorporated in 1840 – prospered, grew, and urbanized, aided by the completion of the Main Line of Public Works (a canal and rail system between Pittsburgh and Philadelphia) along the Allegheny River in 1834. The system’s Western Division, between Pittsburgh and Johnstown, was finished even earlier, in 1829. In Swiss Hole, lead and iron works, textile and glass factories, a flouring mill, and John Straub’s Brewery were established near the Voegtly’s cotton mills along the river and canal. Sawmills and wood-working shops also occupied the northern banks of the Allegheny River, which brought lumber from northwestern Pennsylvania’s forests. In the 1850s, the railroad supplanted the canal as a means of transporting materials and products to and from the area.

A major industry centered in Sector 1 was the butchering and processing of livestock in slaughterhouses, rendering factories, and tanneries. Stockyards occupied Herr’s Island, and related businesses, including soap and candle factories, glue and fertilizer works, harness and saddle makers, bellows makers, and shoemakers, employed residents of the Spring Garden Valley. Additionally, the western slope of Spring Hill, overlooking the East Street valley, was quarried for stone and clay for making brick (Rooney and Peterson, 60-61).

These quarries were likely the source for the masonry used to construct the Allegheny Water Basin in 1848. This reservoir – 412 feet long, 225 feet wide, and 15 feet deep – occupied seven acres on the western side of Troy Hill on the site of what is now the Cowley Recreation Center. The Allegheny City Committee on Water purchased the property from Nicholas Voegtly, Sr. The reservoir served Allegheny City throughout the nineteenth century. Stones from the reservoir may be seen near the spray park at the Troy Hill Playground, but it is not known if they are part of an intact reservoir wall or have been relaid.

While these industries dominated the flats and valleys, the hilltop communities of Troy Hill, Spring Hill, and the Spring Garden and East Street valleys were still a mostly agricultural hinterland before the Civil War. Only a few streets, like Troy Hill Road and Itin Street, provided access and allowed produce to be brought from the hilltop farms and orchards to market in Allegheny City.

The hilltops’ rural character began to change in the 1870s as a result of the real estate investments of Adam Reineman, a former Chambersburg resident and wealthy president of the German Trust and Savings Bank of Pittsburgh, who resided on Lowrie Street in Troy Hill. Reineman purchased a large amount of land in Troy Hill and Spring Hill, which he and his heirs subsequently subdivided and sold to other German families over the next few decades (Rooney and Peterson, 31). In 1887, an incline was constructed on Troy Hill, part of a pattern of development of a “unique hillside system of steps and

funicular railways” which sought to conquer the challenges of Pittsburgh’s – and Allegheny’s – steep terrain (Cultural Heritage Plan, “Industrial Period: 1850-1940”). The 370-foot incline opened Troy Hill to more rapid residential development by making the hilltop more accessible for workers and families seeking to move away from the more industrialized flats. The Troy Hill incline operated until 1898.

In their recent history of Allegheny City, Dan Rooney and Carol Peterson state that “(e)ven as western and central Allegheny City strengthened its economic and social links to Pittsburgh, the city’s heavily German eastern neighborhoods remained a community apart” (Rooney and Peterson, 99). In Troy Hill, Spring Hill, and the Spring Garden and East Street valleys, residents spoke German, conducted business and worship in German, had their own German language newspaper, and participated in German singing, social, and cultural societies.

While German language and institutions defined the dominant culture, Allegheny’s burgeoning economy brought immigrants from many other countries, as well. The earliest English settlers were followed by Scots, Irish, and Scotch-Irish. Croats formed a strong community south of East Ohio Street and east of Chestnut Street. Immigrants from Bohemia (now the western part of the Czech Republic) also settled in this area, then moved northward into the western end of Troy Hill (known as “Bohemian Hill”) and the adjacent part of Spring Garden during the late nineteenth century. Other ethnic groups included Lusatian Serbs, Slovaks, Carpatho-Russians, Ukrainians, and Greeks. The sector’s residential neighborhoods were dotted with religious institutions representing the many faiths of these immigrant groups, including Episcopalian, Presbyterian, Lutheran, Methodist, Roman and Byzantine Catholic, Eastern Orthodox, and Jewish.

As Allegheny grew economically, it sought political expansion by annexing surrounding communities. Troy Hill, the East Street valley, and lower Spring Garden were annexed in 1868 (see Plate 1, next page). After Allegheny itself was annexed to Pittsburgh in 1907, the North Side continued to expand, adding Spring Garden Borough in 1910 and Summer Hill and Northview Heights in 1922 and 1932, respectively. The latter areas became the locations of new kinds of housing developed in the mid-twentieth century to address the needs of a burgeoning post-war population and the problems of a declining older community. In the 1980s, construction of a new expressway, I-279, demolished significant sections of Sector 1 and cut it off from its sister communities to the west.

Several factors contributed to these circumstances. The Great Depression, followed by World War II, resulted in a long deferral of maintenance to the area’s infrastructure and building stock. Meanwhile, mobilization for war brought about an expansion of Pittsburgh’s steel, machinery, and food-processing industries and caused a massive redistribution of the workforce to Pittsburgh. Pittsburgh consequently gained population in need of housing at a time when homelessness and poor housing conditions were especially widespread.

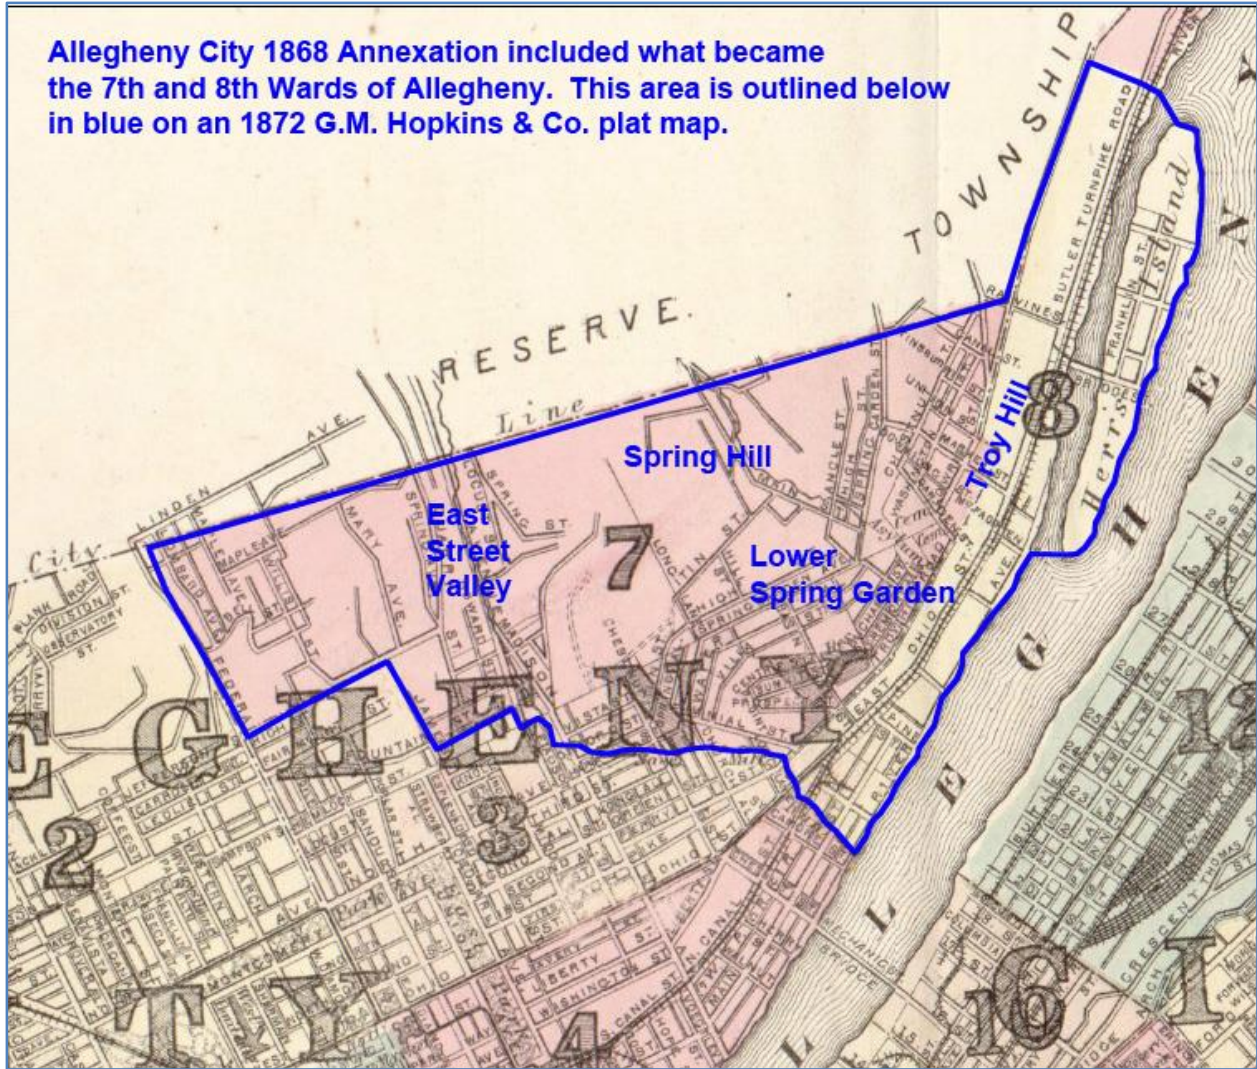

Plate 1: Allegheny City 1868 annexations of parts of Reserve Township (Allegheny Ward 7) and Duquesne Borough (Allegheny Ward 8).

In 1937, the Federal government established a public housing program to aid low-income families in attaining decent, affordable housing. The Pittsburgh Housing Authority was on the vanguard of the public housing movement nationwide, securing federal funding for three projects in the Hill District immediately after the United States Housing Authority was established. According to progressive housing theories of the time, public housing favored large-scale, master-planned, multi-family “projects” of high-rise or garden apartments which were set apart – physically and consequentially, socially – from the older, traditional communities in which they were built. Since there was not room to construct such projects in existing neighborhoods, which had been densely built up in the nineteenth century, the Housing Authority looked to remoter sectors of the city and to hilltop sites which were not desirable to private developers. One such area was the hilltop north of Spring Hill. Northview Heights joined the Pittsburgh Housing Authority’s portfolio when it was constructed on formerly vacant land between 1955 and 1962.

At around the same time, in 1959, the nonprofit housing advocacy agency ACTION-Housing constructed Spring Hill Gardens, a federally-backed, large-scale rental apartment project which was notable for its deliberate racial integration at a time before federal fair housing laws prohibited segregation or discrimination in the housing market.

The 1950s and 60s also saw a nationwide boom in suburban housing construction and a corresponding shift in population from urban to suburban neighborhoods, which also affected transit habits, patterns, and desires. The federal government abetted suburban growth in many ways, including construction of an interstate highway system, ostensibly to move troops in the event of a national emergency. Sector 1 experienced the construction of an interstate highway spur, I-279, through the East Street Valley to create an efficient route between the city and the new suburban communities burgeoning in the North Hills. Planning and property acquisition took place between 1967 and 1982, and the highway was completed in 1989.

Parishioners of St. Boniface Roman Catholic Church, which was originally slated for demolition, persuaded the Department of Transportation to alter the route to spare this building. However, hundreds of other properties in the East Street Valley were taken by eminent domain, and the road became a major barrier separating formerly connected communities. The URA's Harpen Hilltop development in Summer Hill served to receive moderate-income residents of the East Street Valley displaced by property acquisition for the highway.

Troy Hill

The neighborhood of Troy Hill was founded as the village of New Troy – named after the New York state hometown of the area's original landowner, Elizabeth Seymore – in 1833. Settlement of the neighborhood by German immigrants began in the 1840s and swelled until its peak in 1900.

By the middle of the nineteenth century, this portion of the Reserve Tract was sufficiently populous and prosperous to merit its own municipality. On April 5, 1849, the Pennsylvania Legislature passed an act creating the Borough of Duquesne. Duquesne included all of Herr's Island and extended northward from the river bank up the steep slope of Troy Hill to the middle of Lowrie Street. On the west, it was bounded by the city line of Allegheny (presently Chestnut Street) and on the east, by the original boundary of the Reserve Tract (Girty's Run). Duquesne was annexed by Allegheny City in 1868.

Property atlases of Troy Hill from the 1870s and 1880s show intensive industrial development along the Allegheny riverbanks and Western Pennsylvania railroad line. Large houses on spacious lots stood north of Troy Hill Road between Gardner and Rialto Streets. West of Gardner Street lay two large properties, St. Joseph's Orphanage and a Catholic cemetery; west of these, between St. Joseph's (on the east) and the Allegheny Reservoir and a block of tanneries (on the west), was a residential neighborhood much more densely developed with frame houses along Herman, Buchanan, Tripod, and Return Street. East of the reservoir, land owned by the Voegtly family was being subdivided for development. East of Rialto lay the German United Evangelical Protestant Cemetery and a large tract owned by Adam Reineman.

Troy Hill's further development through the end of the nineteenth century was closely tied to the real estate investments of Reineman and to the construction of the Troy Hill Incline. Reineman's purchase, subdivision, and sale of property drew many German residents to the neighborhood, where they lived, opened businesses, and participated in the social life of the community. This was centered on churches, social halls, singing groups, gymnastic associations (Turnvereins), and parades and festivals that recreated those from residents' hometowns in Hesse, Swabia, Alsace, Bavaria, Prussia, and Bohemia. The former Troy Hill Turnverein survives as an American Legion hall on Hatteras Street, and a building at the corner of Sundeman Street and Liedertafel Way appears to be the (much-altered) Troy Hill Liedertafel, or singing society, present by 1901.

The Troy Hill Incline was built by Samuel Diescher in 1887 and operated until 1898. The incline's lower station was located across from the northern end of the 30th Street Bridge and its upper station building still stands at 1733 Lowrie Street.

Most of Troy Hill's residents were blue-collar workers, but wealthier business owners, such as brewery partners Eberhardt and Ober, land baron Adam Reineman, and publisher Victor Scriba lived in the neighborhood as well, particularly in the earlier-developed, more spacious sector east of Gardner Street. Reineman conducted real estate transactions from an office in an addition to his Second Empire style home, which is still standing at 1517 Lowrie Street, its original clock tower removed. Reineman's earlier home, a Greek Revival style house on this site which he inhabited from 1864-1876, is said to have been moved "a short distance away" to allow for the later house's construction (Yanosko, 23). This is likely the house at 1525-1527 Lowrie Street.

One of Reineman's brothers, Louis, was a partner in a jewelry firm who also invested in local real estate. His house stands at the intersection of Ley and Rialto Streets. The Eberhardt House is at 1814 Harpster Street and the Ober-Guehl House at 1501 Lowrie Street. The Eberhardt carriage house also survives as an apartment building at 1814 Eberhardt Street.

News in Troy Hill was circulated via the German language newspaper *Freiheits Freund* ("Freedom's Friend"), the oldest such paper west of the Alleghenies. In the nineteenth century, *Freiheits Freund* was published by Victor Scriba. Scriba first lived with his wife Caroline on Progress Street in East Allegheny but later constructed an Italianate estate called Scriba Place above Troy Hill. The Pittsburgh City-Reserve Township line passes directly through the Scriba home, which still stands at 1 Scriba Place.

By the turn of the twentieth century, the western sector of Troy Hill above Troy Hill Road was occupied by a Bohemian community known as "Bohemian Hill." The majority of this group was Roman Catholic and worshipped at St. Wenceslaus Catholic Church on Progress Street, named after the patron saint of Bohemia. There was also a minority group of Czech Protestants who formed their own congregation. In 1908, they built the First Bohemian Presbyterian Church at 1023 Province Street (renamed Troy Hill Presbyterian Church in 1926). Both of these churches still stand.

Another significant immigrant group whose architectural history has all but disappeared was the Croatians (with the exception of St. Nicholas Church in Millvale—just over the City line). In the nineteenth century, the flat plain along the Allegheny River east of Chestnut Street was settled by

immigrants from Jastrebarsko, a town near Zagreb, and became known as “Mala Jaska.” Here, frame houses built directly into the hillside coexisted with industries such as slaughterhouses, rendering factories, and tanneries between the 16th Street Bridge and Allegheny’s border with Millvale to the east. Flooding perpetually troubled this plain, and today it is dominated by PA Route 28, which begins at East Street and follows the Allegheny River north. Construction and widening of Route 28 decimated the residential precinct of Mala Jaska, and its house of worship, St. Nicholas, North Side Roman Catholic Church, was demolished in 2013.

Other, extant churches in the Troy Hill community include the Roman Catholic Most Holy Name of Jesus at Claim and Harpster streets (built 1866-1868; expanded 1875, 1877, 1898) and Grace Lutheran Church, built in 1899 (Tinsbury and Hatteras streets). Most Holy Name contains a notable Second Empire style rectory and the nationally-known St. Anthony’s Chapel, which displays the collection of relics belonging to Holy Name’s first pastor, Fr. Suitbert G. Mollinger, and is believed to be the largest public collection of relics in the world. Grace Lutheran served not only German immigrant families but an influx of Pennsylvania Railroad employees who moved to Troy Hill in the 1890s when the company’s local caller, who scheduled the crews, was assigned to Troy Hill. This church contains a pipe organ underwritten by Andrew Carnegie and installed in 1906.

The Troy Hill neighborhood also includes Herr’s Island, an island in the Allegheny River, now popularly known as Washington’s Landing. Herr’s Island was named for an early owner, Benjamin Herr, who used the island for farming. By 1872, Herr’s Island contained oil refineries, saw mills, and the Graff Tube Works. Later, Herr’s Island became occupied by stockyards among the largest in the United States, advantageously located adjacent to the Pennsylvania Railroad. Swine were driven from these stockyards over Troy Hill via Rialto Street (thus nicknamed “Pig Hill”) to be slaughtered at packing plants on Spring Garden Avenue. Today little evidence of these uses remains on the island. It was the site of a 42-acre brownfield redevelopment with upscale housing, parkland, and offices in the 1990s.

Extant landmarks from other prominent Troy Hill industries are the H. J. Heinz food plant and buildings of the Eberhardt and Ober Brewery, both comprising National Register historic districts.

The City’s Cultural Heritage Plan notes, “The greatest opportunities for historic preservation in Sector 1 occur in Troy Hill... particularly along Lowrie Street and Voskamp Street [n.b. Voskamp Street is actually in Spring Garden] where late 1800s homes and churches with impressive architecture strongly contribute to the character of the neighborhood.” There is one City-designated Historic Landmark in Troy Hill, the Shrine of St. Anthony of Padua (1700 Harpster Street), and two National Register listed historic districts: the H. J. Heinz Plant and Eberhardt and Ober Brewery.

Spring Hill-City View

Spring Hill-City View is located on the hillsides and hilltop just above East Allegheny and western Troy Hill. The East Street and Spring Garden valleys physically divide this neighborhood from those to the east (Spring Garden) and west (Fineview); the neighborhood is generally bounded by Goehring and Itin streets on the south and Reserve Township and Northview Heights on the north. The building stock is

primarily single-family residential built before 1940, interspersed with several churches, the most significant of which is the National Register-eligible St. Boniface Roman Catholic.

Spring Hill was named for natural underground springs in the area. The German immigrants who settled in the area between 1850 and 1920 gave many of the streets German names such as Rhine, Woessner, Haslage, Zoller, and Goehring. As recently as 1977, a Pittsburgh neighborhood profile described Spring Hill as having a “Bavarian atmosphere” (Pittsburgh Neighborhood Alliance).

Settlement of Spring Hill began along East Street, which was lined with a mix of residences and industries, including an oil works, a tannery, and a glue factory, by 1872. A smaller concentration of frame dwellings was present along what is now Rhine Street on the east side of the neighborhood. In between were large parcels of property and a scattered few homes. South Side Avenue and Luella Street were laid out by 1876, but there were few residences. The 1882 Hopkins atlas shows the Bell and Weis Quarry above Vista Street in the vicinity of what are now Kaiser Avenue and Vallette Street. Also by this year, the German Evangelical Lutheran Church held the parcel which is now occupied by St. John’s Cemetery. The Allegheny City line then ran through the middle of this property, with Reserve Township to the north.

Development occurred rapidly through the turn of the twentieth century. By 1901, most of the large estates between Long Lane (now Lappe Street) and the continuous border of St. John’s Cemetery had been subdivided, and about half improved with frame houses. East of Long Lane, large tracts held by the Voegtly, Hesperheide, Hetzel, and other German families remained interspersed with blocks of new development. The northern portion of the neighborhood was annexed in 1922, putting the city line at roughly Essen Street. Property atlases from the 1920s and 30s show several residential subdivisions in this area that do not appear on current maps; the Depression likely stalled many developers’ and residents’ plans to build.

In 1959, ACTION-Housing – a nonprofit agency established in 1957 to focus on the needs of moderate-income families who earned too much to qualify for public housing but too little to purchase housing at market costs – constructed Spring Hill Gardens, a 209-unit apartment complex at Buente and Rhine streets. Backed by the Federal Housing Administration, Spring Hill Gardens was an experiment in racially-integrated rental housing, seeking to demonstrate that “moderate integration” of multi-family housing was both socially and commercially feasible. Spring Hill Gardens was sold to a realty company in 1965 (Lubove, 148). It should be evaluated within the context of housing policy and development during the urban renewal era.

During the late 1960s and 1970s, the Department of Transportation acquired properties in the East Street valley for the right of way of a new expressway, I-279. The road was built in the 1980s. Parishioners of St. Boniface Roman Catholic Church (A. F. Link, 1926) succeeded in having the church and school listed in the National Register of Historic Places in 1981 and preserving it from demolition for the highway. St. Boniface is the only listed property in Spring Hill-City View, though the Spring Hill School at 1351 Damas Street has been determined eligible for listing in the National Register. Pittsburgh’s

Cultural Heritage Plan notes, “Although there is not a large grouping of historic assets, there are preservation opportunities for single structures with historic significance.”

Spring Garden

Spring Garden is a narrow neighborhood which follows the floor of the valley that separates the two adjacent hilltop neighborhoods of Spring Hill and Troy Hill. Like those neighborhoods, Spring Garden was initially settled by the descendants of German-speaking people who had emigrated from Europe to East Allegheny in Allegheny City. The compact scale of the valley resulted in a tight pattern of development that allowed these initial residents to walk to their places of employment, which included slaughterhouses, meat packing concerns, rendering factories, and tanneries located along Spring Garden Avenue. The concentration of such industries led to the neighborhood’s stream, Saw Mill Run, being nicknamed “Butcher’s Run.” At least one former tannery, the Woelfel and Linke Tannery, still stands between Spring Garden Avenue and High Street at Old Honesty Street.

By 1872, both Spring Garden Avenue and High Street were already densely developed with residences and tanneries to the city line at Wickline Lane. Voskamp Street, then called Villa Street, followed the northern boundary of the Allegheny Reservoir and was only slightly less built up.

North of Wickline, Spring Garden was then an independent borough defined by its present neighborhood boundary. Development was less dense in this sector, with fewer industries, small concentrations of frame houses at intervals along Spring Garden Avenue, and larger parcels beyond. The greatest concentration was the intersection of Spring Garden Avenue and Mutzig Street (presently Schubert Street). By 1897, Spring Garden had a post office, the Mutzig Post Office, on the western side of Spring Garden Avenue south of the intersection. A church was located north of the intersection, and behind it was the house of J. Mutzig and the Spring Garden Public School. Spring Garden Borough was annexed to Pittsburgh in 1910.

A 1974 City Planning profile of Spring Garden explained that, “Historically, this neighborhood, because of its location and convenience for industrial expansion out of the valley floor from the East North Side, has been of mixed industrial and residential uses. Today, the industrial uses are becoming marginal due to the lack of room to expand. This has left mostly row-type residential uses to survive along the narrow streets on the valley floor and hillsides.” According to the City’s Cultural Heritage Plan, “Historic homes along Voskamp Street and High Street with Italianate architecture offer strong opportunities for preservation.” Most of these houses are from the 1870s and 1880s or earlier and of frame construction. They include many one-story cottages, a housing type rare in Pittsburgh. These should be assessed for their number, integrity, and preservation potential.

A few churches also remain which have associations with Spring Garden’s immigrant community. St. Peter’s Lutheran Church (now United Church of Christ) at 18 Schubert Street had been constructed by 1906 on the site of the Mutzig house.

The proximity of previously-identified resources to one another in Spring Garden suggests the presence of a possible historic or conservation district.

Northview Heights

Northview Heights was part of Reserve Township until it was annexed to Pittsburgh in 1932. At that time, the neighborhood was mostly vacant land, isolated by its topography from Spring Hill to the south and Summer Hill to the north. Between 1955 and 1962, the Housing Authority of the City of Pittsburgh developed this land into a 999-unit public housing project, a combination of high-rise and attached row units, called Northview Heights. Due to both topography and design, Northview Heights is isolated from neighboring communities. It is served by its own elementary school, Pittsburgh Northview. Northview Heights should be evaluated within the context of public housing in Pittsburgh.

The City's Cultural Heritage Plan places Northview Heights among neighborhoods that "offer limited opportunities for preservation." A previous survey (the 1993 Pittsburgh Register of Historic Places) identified a ca. 1840 Greek Revival farmhouse at 101 Hazlett Street; however, the location of such a house is not consistently shown on historic property atlases. These maps do appear to show a mid-nineteenth century house at nearby 136 Chicago Street.

Summer Hill

Summer Hill is the northernmost neighborhood in Pittsburgh and was part of Reserve Township until its annexation in 1922. It owes its distinctly suburban character to its post-World War II era of development. After the war ended, returned veterans and their families created great demand for new housing, while stipulations for federally-backed mortgages under the G.I. Bill supported veterans' purchase of new homes in suburban settings. At the same time, federal urban renewal and highway construction programs were displacing many residents of traditional urban neighborhoods, creating a need for relocation housing.

Land in Summer Hill remained sparsely developed until the North Side Civic Development Corporation constructed a residential development called Harpen Hilltop on 51 acres in the late 1960s. The URA acquired and prepared the land for development of 373 modest detached homes, plus a 272 unit high rise. Priority for residence in Harpen Hilltop went to moderate-income residents of the East Street valley who were displaced by the construction of I-279. City Planning maps from 1974 refer to the area as "Harpen Hilltop" and also refer to a nearby "Ivory Avenue" district, but by the time a 1977 neighborhood atlas was produced, the name "Summer Hill" was in use for both areas.

The City's Cultural Heritage Plan places Summer Hill among neighborhoods that "offer limited opportunities for preservation," and previous surveys have identified no potential historic resources in this area. However, post-war suburban development and urban renewal and its consequences – such as dislocation and relocation of residents of areas taken for highway construction by eminent domain – are historical contexts of emerging significance, and the Harpen Hilltop development should be evaluated within these contexts.

Results

Summary of Findings

The entirety of the Spring Garden neighborhood as presently designated by the City of Pittsburgh was surveyed during this effort, as well as a previously-surveyed portion of East Deutschtown and selected area of Spring Hill-City View. Surveyed properties were evaluated for integrity, and given a “High,” “Medium,” or “Low” rating. Vacant parcels and those on which previously-known resources had been demolished were also notated in the tablets during the survey. Mapping of these property attributes (integrity and vacancy) shows that Spring Garden and Deutschtown have been heavily affected by loss of historic building fabric, while the surveyed area of Spring Hill-City View possesses higher overall integrity of blocks and streetscapes.

The re-survey of the East Deutschtown Historic District revealed an area (bounded by Madison Avenue, Vinial Street, East Ohio Street, and Concord Street) that, despite its loss of National Register eligibility, displays moderate internal coherence as a nineteenth century immigrant workers’ neighborhood, served by schools, businesses, and religious and social institutions located in the midst of dense blocks of residences. While there is scattered demolition within these blocks, most loss of historic fabric has occurred (and continues to occur) at this neighborhood’s edges: Madison Avenue, where houses and storefronts face several bleak lanes of highway; Chestnut Street, which despite the preservation of its historic brick pavement and streetcar rails, serves as a busy connector between State Route 28 and points north; and East Ohio Street, which functions as part of State Route 28 and where a new hotel is proposed for the neighborhood’s southwestern block.

In Spring Garden, the survey found a fragile neighborhood that has already experienced a heavy toll of demolition, but whose remaining resources still reflect its original pattern of dense, mostly vernacular residential development along a linear industrial corridor. Spring Garden Avenue forms the spine of this neighborhood, with parallel High and Voskamp streets also presenting buildings and groupings with character and integrity. However few industrial complexes survive, and those that do lack integrity. A few micro-neighborhoods form nodes along Spring Garden Avenue’s path, suggesting a settlement pattern almost of a string of tight-knit villages which persists to this day. But the neighborhood lacks a center or even many civic, commercial, or religious buildings to act as focal points. Moreover, almost every block is impacted by vacant lots, sometimes several in a row. Resources with medium to high integrity are fairly evenly distributed within the streetscapes that remain.

Spring Hill-City View is comprised of resources from roughly four periods of development. The oldest of these is represented by individual houses built before the Civil War, when Spring Hill was on the urban fringe and had a semi-rural character. Such houses share many characteristics with mid-nineteenth century romantic suburban houses, as they are upper-middle class dwellings, built in fashionable revival styles, and sited with attention to topography and vistas. These houses were then incorporated into the urban neighborhood, dominated by rowhouses, that was built up during the late nineteenth century. In the early twentieth century, blocks of single-family houses were developed. Finally, in 1959,

Spring Hill Gardens (now known as Three Rivers Manor), a garden apartment complex of 18 low-rise buildings, was built roughly in the center of the neighborhood on the former estate of Henry Hesperheide.

The survey of Spring Hill-City View was unable to be completed within the time frame of this phase; therefore, an incomplete view of this neighborhood was obtained. Project historians prioritized what appeared to be the oldest and most fragile parts of the neighborhood for survey: south of Buente Street, roughly between Rhine Street on the east and East Street on the west. Highway construction in the East Street Valley has caused the demolition of that part of the neighborhood and hastened the decline of the streets, such as Overbeck, Brahm, and Solar, on the hillside overlooking I-279. Stronger integrity was found east and south of St. John's Cemetery. With the exception of a few properties on Walz Street and lower Homer Street, the area east of Rhine Street—which is geographically separated by a steep hillside—was not surveyed as part of this phase, nor was the neighborhood north of Buente Street, including Three Rivers Manor.

Potentially significant resources throughout the survey area are displayed in Table 2. A listing of the status of previously surveyed resources that were in the proposed boundaries of the East Deutschtown Historic District (PA SHPO Key Number 77385) is included in Table 3. Note that the East Deutschtown Historic District was determined eligible in 1984, but this eligibility determination was reversed in 2008 because of extensive demolition. The location of previously surveyed resources is shown in Figure 2 in Appendix B. Table 4 lists all newly surveyed resources. Table 5 lists all one-story cottages identified in the present survey effort, as this resource type was deemed to warrant further study.

Types of Properties

The survey area as a whole consists predominantly of small-scale, two- to two-and-a half-story residences, attached or in densely-built detached rows, which originally housed a community of German-speaking immigrant workers and their families in the mid to late nineteenth century. Also represented in Sector 1 is a housing type atypical of Pittsburgh in general, the one-story workers' cottage (Table 5). Seventy-nine such cottages were surveyed in this phase and, because Phase 1 recommended further study of this housing type in Pittsburgh, in this phase these examples were flagged by the notation "one-story cottage" in the "Notes" field. Most of them are scattered amongst the other buildings in the surveyed neighborhoods, but there is one street in Spring Hill, Woessner Street, that is entirely lined with one-story cottages.

The surveyed residences are mostly vernacular examples of the Greek Revival, Italianate, and Second Empire styles, reflecting the period of greatest building activity in the area (ca. 1850-1900), and frame construction is common. Building in the area continued into the first third of the twentieth century, resulting in the presence of resources in the Colonial Revival, Classical Revival, and Arts and Crafts/Bungalow styles, as well. Examples from this later era, as well as more spacious middle-class housing, are more prevalent in Spring Hill than in East Deutschtown or Spring Garden.

Little was built in either Sector 1 or 3 after about 1940 aside from the aforementioned 1959 garden apartment complex in Spring Hill-City View. There is a concentration of ca. 1930-1960 houses on Sophia

Street and several scattered examples of similar housing on adjacent Yetta Avenue in Spring Hill-City View. Later examples of modern infill or replacement housing include a group of ca. 1991 townhouses in the 1100 block of Spring Garden Avenue and a group of ca. 1995 townhouses at 1156-1206 Voskamp Street. St. Ambrose Manor, a 10-story senior apartment building at the corner of Yetta Avenue and Rhine Street in Spring Hill, built in 1980, stands out for its high-rise scale and massing. A couple of large modern retail properties sit on Spring Garden Avenue between Borough and Schubert Streets on the site of a former packing plant; temporary housing for Korean War veterans occupied the site during the late 1950s and 1960s.

Approximately 31 percent of both the re-surveyed East Deutschtown district and the newly-surveyed area of Sector 1 are vacant lots. These are distributed throughout the area. In East Deutschtown and Spring Garden, the number and concentration of vacant lots detracts from the overall integrity of these neighborhoods. Vacancies are not so severe in Spring Hill-City View; within the portion of this neighborhood surveyed, there were many strong, intact blocks.

None of the neighborhoods surveyed as part of this phase has a strongly-defined commercial core. Instead, scattered commercial storefronts are located primarily on the neighborhoods' main thoroughfares: Spring Garden Avenue in Spring Garden, Rhine Street in Spring Hill, and Madison Avenue and Chestnut Street in East Deutschtown. East Ohio Street, that neighborhood's traditional commercial street, has lost almost all of its buildings between Madison Avenue and Chestnut Street. The most architecturally imposing one to remain, and the only one not scheduled for future demolition as part of the proposed new hotel development, is the Beaux Arts former Workingman's Savings and Trust Building at 800 East Ohio Street. However, due to extensive demolition and highway construction, it has lost integrity of setting.

Schools, churches, social halls, and industrial buildings also occasionally intersperse these neighborhoods' essentially residential character. These resources are for the most part as modest as the housing stock, but reflect the strong Germanic heritage of the area's original population. In East Deutschtown, the Teutonia Männerchor at 857 Phinneas Street has been serving to preserve the German culture of neighborhood residents since its construction in 1888. At the northern end of the neighborhood, the Allegheny Social Hall is still extant, but vacant. Evangelische Imanuel's Kirche, a German church on Madison Avenue in East Allegheny, is also relatively intact but vacant; the original St. Michael and All Angels Lutheran Church on Spring Garden Avenue appears to have been clad in modern stone veneer. The former St. Peter's Lutheran Church, a frame church in the Arts and Crafts style, stands in the old "Mutzig village" at Schubert Street and Spring Garden Avenue. The former Woelfel and Linke Tannery and J. H. Faulhaber Candy Factory are remnants of the many industries that once employed neighborhood residents, and the pharmacy at 1435 Spring Garden Avenue is housed in the former headquarters of the Greater Beneficial Union No. 383. Parks in these densely-built neighborhoods are relatively modern creations, typically pocket parks or playgrounds on former vacant lots. The largest open space in the surveyed neighborhoods is St. John's Cemetery, located on the Spring Hill hillside facing downtown since the mid-19th century and containing many German burials.

Together, these resources complete a picture of working-class neighborhoods on the outskirts of fashionable Allegheny City which provided the necessities of housing, education, employment, and social and religious gathering for striving communities of immigrants.

Integrity and Condition

Integrity of feeling and association are present within the survey area, but compromised—especially in East Deutschtown and Spring Garden—by extensive demolition and presence of vacant lots, while some areas of Spring Hill-City View are quite intact. Integrity of materials, design, and workmanship are also weak in East Deutschtown and Spring Garden and in Spring Hill-City View west of St. John’s Cemetery. Most properties in Sector 1 have been altered in some way, most prevalently through the installation of artificial siding and/or the alteration of original openings and/or porches. Additions which alter massing are present in the survey area but less common due to the tight siting of most properties. The era of most of these alterations appears to be ca. 1940-1980 with many resources evincing deferred maintenance. Individual resources whose original materials, design, and workmanship have been maintained or restored are rare, particularly in Spring Garden. Only 7.4 percent (n=68) of resources in Spring Garden and Spring Hill-City View had high integrity, while 52.2 percent (n=478) had medium integrity and 40.4 percent (n=370) had low integrity.

Recommendations & Conclusions

Because this survey was designed to serve both the City of Pittsburgh and the PA SHPO, recommendations have been formulated for potential National Register eligibility evaluations and for the use of survey data under the City of Pittsburgh's historic preservation ordinance. We also bear in mind that successful historic preservation may take place independent of formal designation. Other recommendations pertain to properties meriting intensive level study, and the overall methodology of this survey effort, in general.

Eligibility of Resources for National Register and City Listing

The National Park Service defines a district as a type of resource that “possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development” (*National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, 2002). Based on the findings of this survey, we do not recommend pursuing the designation of any new historic districts at this time, but recommend other approaches to the stabilization and conservation of historic fabric in the surveyed neighborhoods.

East Deutschtown

Determined eligible to be a National Register Historic District in 1984, East Deutschtown has already had this determination officially reversed in 2008 due to the extent of demolition within its boundaries. The purpose of re-surveying this area was not to re-evaluate its eligibility for the National Register, but rather to update the City's understanding of present resources in the face of current transitions in the neighborhood. Recommendations pertaining to this, and to individual resources which are potentially eligible for the Register in the absence of a district, are discussed below.

Spring Garden

Similar issues with vacancy and integrity—and, therefore, concentration, linkage, and continuity of resources—likewise do not indicate National Register Historic District eligibility for Spring Garden. Nor is designation as a City Historic District likely to be an effective preservation tool for what is left of this neighborhood, as most of the buildings in the neighborhood already have some non-original materials or replacement features. Under the “grandfather clause” of the City of Pittsburgh Historic Preservation Ordinance, such materials and features extant at the time of historic district designation may be maintained and/or replaced in kind in perpetuity.

Yet Spring Garden, having developed in relative isolation from Pittsburgh's other North Side neighborhoods, retains elements of a unique historic character that should not be overlooked because strict historic district criteria cannot be met. Our recommendations for Spring Garden, at present, are oriented to stabilizing the neighborhood in order to prevent further demolition and loss of character.

The tool of a Neighborhood Conservation District may be well-suited to the goal of preserving Spring Garden’s overall scale, density, and mid-to-late nineteenth century architectural character without imposing detailed review of individual changes to building materials or design. The City does not currently have legislation permitting the designation or administration of Neighborhood Conservation Districts, but is studying the concept for potential future implementation. If Conservation Districts were to be enabled through City ordinance, protections within such districts would entail design review of all proposed new construction (of a pre-established size or percentage) and review of all proposed demolition. These activities presumably would be reviewed by the City’s Historic Review Commission. Such review would serve to reinforce the neighborhood’s existing character and to act as a check on its further erosion through demolition.

Consideration of the Spring Garden neighborhood as a potential Neighborhood Conservation District and/or for homeowner incentive programs (see below) is in agreement with the Cultural Heritage Plan’s recommended “opportunity” for Sector 1:

“Target maintenance programs to deteriorating blocks of pre-1940 homes. Preserve historically significant structures on Lowrie Street, Voskamp Street, and the immediately surrounding areas in Troy Hill and Spring Garden. Use infill construction practices in Troy Hill, Spring Garden, and Spring Hill-City View that complement the historic architectural styles and streetscape pattern of narrow lots. Encourage stabilization and reuse of structurally-sound buildings with significant historic architecture. Promote the German and Austrian ethnic influences that contribute to the character of Sector 1.”

1. *Recommend the Spring Garden neighborhood be supported for designation as a City of Pittsburgh Neighborhood Conservation District, if that type of zoning overlay were to be enabled in Pittsburgh.*

Spring Hill-City View

While generally more intact than East Deutschtown or Spring Garden, Spring Hill-City View also lacks the continuity of historic fabric or significance for historic district designation. Unlike previously-surveyed Troy Hill, which presented a coherent collection of resources sharing a common historical context and period of significance, Spring Hill-City View presents a discontinuous built environment of smaller sub-neighborhoods deriving from different historical events and eras. A building-by-building survey of all of Spring Hill-City View could not be completed as part of this effort, but our preliminary conclusion is that none of these areas is likely meet the National Register criteria for significance.

Nor does there appear to be a need for the demolition/development control offered by a Neighborhood Conservation District in Spring Hill-City View, at present. However, this neighborhood should be monitored for signs of transition. Survey data provide information about the oldest and potentially most vulnerable historic fabric in the neighborhood, in the event that measures to protect it are indicated in the future.

Use of Survey Data by City of Pittsburgh

Eligibility for the National Register is not determinative of eligibility for City historic designation. Moreover, it is not the policy or practice of the City of Pittsburgh to initiate nominations for city historic designation (or, presumably, future Neighborhood Conservation District designation), but rather to evaluate and act upon nominations submitted by community members, organizations, and leaders. Therefore, recommendations for use of survey data by the City of Pittsburgh pertain to the Historic Review Commission's responsibilities under the City of Pittsburgh Historic Preservation Ordinance, §1101.07(b), to:

- Carry on educational activities in furtherance of the purpose of [the Historic Preservation Ordinance];
- Act in an advisory role to City departments and agencies related to preservation matters;
- Act as a catalyst to expedite the flow of projects through departments and agencies;
- Facilitate the redevelopment of historic structures and districts in accordance with approved development plans of the city;
- Act as liaison on behalf of the City with preservation organizations, professional societies, community and other groups, private property owners, and interested citizens, concerning conservation of the historic resources of the city;
- Act as a liaison on behalf of the City with the state Historic Preservation Officer, agencies of the federal government, the National Advisory Council on Historic Preservation, and the National Trust for Historic Preservation, concerning the historic resources of the city;
- Prepare plans for the conservation and development of historic resources;
- Undertake or encourage and facilitate the documentation of the architecture and history of the City's historic resources.

In furtherance of these goals, it is understood that the Department of City Planning intends to fully integrate the list of Potential Individually Eligible Resources and other survey data into its Geographic Information Systems (GIS), so that it may serve as a tool in all aspects of implementing the City of Pittsburgh's comprehensive plan. This will be particularly important in light of the fragile status of neighborhoods such as East Deutschtown and Spring Garden, which do not retain enough integrity to be designated as historic districts but whose remaining historic character continues to be threatened by development, deterioration, and demolition of original building stock. Data on concentrations of vacant properties, on the one hand, and high-integrity pockets, on the other, can help City Planning staff and other City officials direct future development and demolition efforts where they are most sensitive with regard to neighborhood character.

In these neighborhoods, it is also critical to consider how to stem the cycle of deterioration leading to further demolition. Programs to transfer vacant property to new homeowners at low cost and to incentivize existing property owners to maintain and repair, rather than demolish, their buildings have the potential to make the difference between the retention or loss of remaining historic fabric. Many models for such programs are available; for example, federal Choice Neighborhoods funding will soon make grants available to support homeowners in the east Pittsburgh neighborhoods of Larimer and East

Liberty in making needed exterior improvements to their properties. Such homeowner incentive programs, if designed in collaboration with preservation professionals, can be adapted to support the conservation of existing historic building stock while imposing few unwanted restrictions on property owners. Data from this survey can inform the implementation of programs to support investment in the purchase and maintenance housing which retains historic integrity throughout Sector 1.

In order to keep Architectural Inventory survey data up to date, it is recommended that the Department of City Planning coordinate with other city and county agencies to obtain and periodically update the Architectural Inventory database with information related to building construction or demolition. For example, on a regular basis data related to building demolitions and construction could be cross referenced with data from the Bureau of Building Inspection and Allegheny County Assessor. Such interim data updates could utilize City Planning interns and would not typically require field checking.

As City Planning completes surveys of Pittsburgh neighborhoods, it is recommended that the survey data be shared with other community stakeholders and the PA SHPO to ensure its long-term preservation. An electronic database file (such as Microsoft Access) could be created with essential building attribute fields and photographs and should be saved on disk. A second file should be created in PDF format to ensure accessibility as computer programs and file compatibility change over time. Ideally, at least two paper copies of the survey data should be made. One paper copy would be kept in the City of Pittsburgh Archives and the other would be curated at a local independent archive. Possible community partners for data sharing are the Pittsburgh History and Landmarks Foundation, the Pennsylvania Department of the Carnegie Library of Pittsburgh, the Archives of Industrial Society at the University of Pittsburgh, the Architectural Archives at Carnegie Mellon University, and the archives maintained by Preservation Pittsburgh.

- 2. Recommend the Architectural Inventory survey data, which has been incorporated into the City's GIS, be utilized while planning for the city, and when implementing aspects of the comprehensive plan.***
- 3. It is recommended that Pittsburgh Department of City Planning develop best practices to keep the database and GIS files relevant and useful in the long term and ensure its archival stability.***

It is also recommended that the Department of City Planning, through its Historic Review Commission, Historic Preservation Planner, and relevant Neighborhood Planner, pilot and develop a practice of sharing survey results with the survey community in a meeting. In areas which have not traditionally had a strong culture of preservation awareness or action, including the present survey area, the purpose will be to start a conversation about historic preservation in the surveyed community. In areas with established historic districts, the conversation may continue at a higher level about expansion of current preservation activities. Meetings should include a variety of stakeholders, including local community groups, preservation organizations, and residents and property owners, as well as Historic Review Commission representative(s), city officials, and PA SHPO staff. Ideally, the survey area's City Council

representative would host the meeting at a location within the survey area. A typical meeting agenda might be:

- Introductory presentation about the benefits of historic preservation (for “new” communities) or the accomplishments of historic preservation to date (for “experienced” communities);
- Summary overview of historic preservation tools and practices (National Register, local designation, tax credits, etc.);
- Description of survey activity and presentation of results in that neighborhood or sector;
- Discussion of how City will use data and possibilities for how the community might use it;
- Question and answer.

4. Recommend the results of the Architectural Inventory and survey data be shared with subject neighborhoods at a neighborhood or district meeting.

Intensive Level Survey Recommendations

All of the resources in Table 2, “Potential Individually Eligible Resources,” are recommended for further study or intensive-level survey. Based on appearance and available background information, these resources have the potential to be eligible for listing in the National Register of Historic Places.

5. Recommend resources identified in Table 2, “Potential Individually Eligible Resources” for Intensive-Level survey.

6. Recommend resources identified in Table 2, “Potential Individually Eligible Resources,” with pre-existing Intensive-Level documentation, to be determined eligible for listing in the National Register of Historic Places.

The one-story workers’ cottages found in Sector 1 are seemingly unique to this area of the city and are recommended for further study as a group. At a minimum, their locations should be mapped and the most intact examples documented in detail while they are still extant. Once more information on this housing type has been collected, we recommend outreach to educate community leaders and property owners on their unique character. Especially in light of the current interest in “tiny houses,” it is worth exploring opportunities to promote interest in Sector 1’s one-story cottages among potential owners who will appreciate both their historic character and their efficient size.

7. Recommend Intensive-Level survey for one-story workers’ cottages in Troy Hill, Spring Garden, and Spring Hill-City View.

Methodology of the Project

Surveyed Properties

The project team identified several ways the methodology for this project should be changed for future Pittsburgh Architectural Inventory survey efforts. For example, one hurdle to a broad-scoped survey effort (including the remainder of Sector 1 and other Pittsburgh sectors) is that surveying *every* building on *every* street will take a considerable amount of time and effort. Within the confines of the current project, surveyors gathered data on 344 previously-surveyed resources and 1,272 newly surveyed resources (see Table 1 for estimates of survey completion; Table 4 for a list of newly surveyed resources).

	Sector 1 Survey	# Parcels Sector 1	# Parcels City-wide	% Complete Sector 1	% Complete City-wide
Not Previously Surveyed	2,515	4,250	139,375	59.2%	1.8%
Previously Surveyed	110*	110*	13,385	100%	3.4%
Total	2,625*	4,360	152,760	60.2%	1.9%

** Previously Surveyed refers to parcels surveyed prior to the commencement of the Pittsburgh Architectural Inventory. This number excludes 53 previously surveyed resources in Sector 1 whose tax parcels have been abolished. The 344 resources surveyed in Sector 3 in the present (Phase 2) survey are not reflected in this total.*

Having spent approximately 128 hours in the field during this effort, at approximately 4.75 minutes per resource, a survey of the remaining 149,791 parcels in the City would take one person approximately 11,858 hours, or 1,482 8-hour days, or 5.7 years to complete (assuming one surveyor and 40-hour work weeks). This process could be expedited if the PA SHPO “minimum record” attributes were only gathered for resources exhibiting potential for district or individual eligibility for listing in the National Register, and which retain a high level of integrity (individual resource) or medium level of integrity (in a potential historic district). Resources with low levels of integrity would be captured in the tablets with a photograph and integrity rating.

Before the survey continues it will be important to define various terms used in the survey, for example, the word “vacant.” For this project, surveyors notated that parking lots, parks, gardens, and other *used* spaces (with no structures) were “sites,” but not necessarily “vacant.” This use of this term and others which could be subjective, such as the criteria for “High,” “Medium,” and “Low” integrity will need to be clearly established before the survey continues in order to ensure consistent results across time, neighborhoods, and surveyors. Survey team members also need to reach a common understanding at the outset as to which attribute fields need to be entered for which resources (e.g., do all fields need to be completed for a resource with low integrity?; does an integrity rating need to be assign to structures

or objects?). For example, in this survey, current function data was recorded for resources with low integrity and photographs were taken of post-1975 resources. It may or may not be desirable to continue this practice in other neighborhoods with different building characteristics. We recommend development of a simple, brief Survey Handbook covering these issues; ideally this would be loaded onto the tablets used in the field for the reference of surveyors. In addition, it is recommended that future surveyors perform a brief “windshield” survey of the target neighborhood in order to assess which areas are likely to be potential NRHP historic districts. The general survey guidelines can then be further refined based on the specific character of the area being surveyed. Surveyors should also identify, based on historical context and results of the windshield survey, any property types of special interest for notation in the survey (e.g. one-story cottages were notated in the present survey).

Another recommendation pertains to CRGIS records of previously surveyed properties. It took a considerable amount of time to identify and resurvey resources plotted in CRGIS. Though we had the State’s Access File and Shape Files for the resources, many of the points were plotted incorrectly, had no addresses, tax parcels or no names (among other missing information). The concept of resurveying these resources is good, but the overlap between the CRGIS files and the City’s Pittsburgh Historic Inventory files (from the Cultural Heritage Plan) is not accurate, and the effort required to locate the properties was considerable. If field-checking CRGIS points is a priority for future survey efforts, the pre-field identification and mapping of these resources can be expedited by the use of City Planning interns or collaboration with local preservation organization staff or volunteers. In order to maintain consistent survey data over time and ensure that assessments of National Register eligibility follow the National Park Service’s guidelines, it is recommended that survey staff meet the Secretary of the Interior’s Standards for *Historian* or *Architectural Historian*.

- 8. Recommend only properties that exhibit potential for district or individual eligibility, and retain “high” (individual) or “medium” (district) level integrity be surveyed using PA SHPO’s “minimum record” attributes (Appendix A); all others should be photographed and assigned an integrity rating in the field.***
- 9. Recommend developing a Survey Handbook containing definitions of survey terms and guidelines for use of attribute fields prior to conducting additional survey work.***
- 10. Recommend conducting a windshield survey prior to the commencement of field work in order to refine the general survey methodology and identify potential historic districts and resources types of special interest.***
- 11. Recommend utilizing interns or collaboration with local preservation organization staff or volunteers for pre-field identification and mapping of CRGIS resources.***

Tablets & Data Population

Overall, the tablets were a highly efficient tool for conducting the survey. However, some technical troubleshooting would improve further efforts.

Because the tablet data save in “real time” to City servers and are not stored locally on the tablets, it is impossible to complete survey work in areas that have no wireless coverage. Project historians experienced areas of no service along Spring Garden Avenue and High Street. In some blocks, surveyors had to enter property data for a particular resource and then walk to the end of a block where reception was better in order to upload the property record. This back and forth journey to areas with better coverage substantially increased survey times in blocks with poor wireless coverage. In addition, GIS mapping would fail to load or update in areas with poor wireless coverage, also causing significant delays. Given the varied terrain of Pittsburgh, there will be numerous areas with inadequate wireless coverage in other neighborhoods. It is recommended that an “offline survey” method of saving survey data to the tablets be devised so that future surveyors can avoid the inefficient task of recording properties in areas without wireless coverage with paper forms and digital cameras and then later re-entering the data in the tablets for upload to City servers. To date, it has not been necessary to perform survey work with paper forms.

The major difference in the tablet application for data collection between the first and second (present) survey effort was that in the first phase, data on individual resources was gathered at the parcel level, whereas data was gathered on geo-referenced points in the phase two (present) survey. Initially the database was created with a set of data points that corresponded with the City and Allegheny County’s address database (i.e. one point for each physical address on record). The major advantage to the point-based method of data collection was that it allowed surveyors to add additional data points in the field for resources that had no address on file or that shared an address or tax parcel with multiple resources. This also allowed surveyors to gather information on objects and structures such as monuments and retaining walls that are typically not associated with a particular address or tax parcel. The point-based method of data collection generally worked well, but after field work was completed, the ability to add new resource points required significant data entry time in the office to enter minimum resource attribute fields and descriptive information manually. The current data platform did not allow surveyors to manually enter or edit fields such as address, property owner, and tax parcel in the field. It would be advantageous to enable these fields to be edited in the field in order to minimize manual data entry in the office.

A significant amount of office time was also devoted to manually assigning Key Numbers and Inventory ID numbers to resources after the completion of field work. The assignment of such numbers is complicated by PA SHPO’s desire to have historically related buildings share a common inventory number. In the present survey, notes were taken in the comments field to help surveyors identify historically-linked resources such as a blocks of row houses or building complexes. The assignment of Inventory ID numbers was further complicated by inconsistency in the methods used to identify linked resources. In future surveys it is important that surveyors be consistent in how they identify and notate historically-linked resources. It is worth investigating possible methods of recording Inventory ID

numbers in the field in order to minimize the time spent in the office manually checking and entering data. The ideal situation would be to have all data fields completed in the field using tablets, with the exception of historic district potential, which would be completed in the office after integrity analysis and mapping is completed.

In future surveys, the battery life of tablet computers should be taken into account to ensure that it does not affect the efficiency of the survey effort. In this survey effort, the tablets utilized had a four-hour battery life and did not have removable batteries, so the project team utilized two tablets per surveyor each 8-hour day for maximum efficiency.

- 12. Recommend developing ways to record survey data using tablets in areas without wireless service.***
- 13. Enable additional property attribute fields to be field edited in order to streamline data collection for newly-created resource points.***
- 14. Investigate ways to enable assignment of PA SHPO Key Numbers and Inventory ID numbers in the field using the tablet application in order to streamline data collection on historically-linked resources.***
- 15. Take into account the battery life of tablet computers in planning future surveys.***

Appendix A: Attribute Fields – PA SHPO Minimum Survey Requirements

Attributes (parcel-by-parcel basis)

As per City of Pittsburgh: Checkboxes for the following categories:

- Potentially Eligible Individual
- Potentially Eligible District
- Vacant – Not Surveyed
- Post 1975 – Not Surveyed
- Integrity LOW – Not Surveyed
- Integrity MED – Surveyed
- Integrity HIGH - Surveyed

As per PA SHPO Minimum Record for CRGIS:

- Historic Name, or blank if there is none
- Resource Type (NR category)
 - Building
 - Site
 - Object
 - Structure
 - District
- Tax Parcel (if there is no address) (automatically populated)
- USGS Quad, UTM Zone, and or Lat/Long.
- Address (automatically populated)
- Municipality (automatically populated)
- County (automatically populated)
- Owner (public, private, or mixed)
 - Public
 - Private
 - Mixed
- Number of resources
- Style (as per “how to complete PHRS survey form”)
 - Colonial
 - Georgian
 - French Colonial
 - Spanish Colonial
 - Dutch Colonial
 - Postmedieval

- English
- Early Republican
 - Federal
 - Early Classical
 - Republican
- Mid-19TH Century
 - Greek revival
 - Gothic Revival
 - Italian Villa
 - Exotic Revival
- Late Victorian
 - Gothic
 - Italianate
 - Second Empire
 - Stick/Eastlake
 - Queen Anne
 - Shingle Style
 - Romanesque
 - Renaissance
 - Octagon Mode
- Late 19TH & 20TH Century Revivals
 - Colonial Revival
 - Classical Revival
 - Tudor Revival
 - Late Gothic Revival
 - Mission/Spanish
 - Beaux Arts
 - Italian Renaissance
 - French Renaissance
- Late 19TH & Early 20TH Century American Movements
 - Prairie School
 - Commercial Style
 - Chicago
 - Skyscraper
 - Bungalow/Craftsman
- Modern Movement
 - Moderne
 - International Style
 - Art Deco
- Other
- No Style
- Mixed
- Year Built 1 (circa dates okay) (may be available through the County Assessment data, though possibly not accurate)
- Year Built 2 (Additions/alterations)

- Exterior Materials (as per “how to complete PHRS survey form”) (need multiple choice – at least three)
 - Adobe
 - Aluminum
 - Asbestos
 - Asphalt
 - Brick
 - Bronze
 - Cast Iron
 - Ceramic tile
 - Cloth/Canvas
 - Concrete
 - Copper
 - Earth
 - Fiber glass
 - Glass
 - Granite
 - Iron
 - Lead
 - Limestone
 - Log
 - Marble
 - Metal, unspecified
 - Nickel
 - Other
 - Plastic
 - Plywood/particle board
 - Rubber
 - Sandstone/Brownstone
 - Shake
 - Shingle
 - Slate
 - Steel
 - Stone, unspecified
 - Stucco
 - Synthetics
 - Terra cotta
 - Tin
 - Vinyl
 - Weatherboard
 - Wood
 - Wrought iron
- Date of Survey Form (date of data collection)
- Images/jpgs
- Site Plan
- Historic Function/Sub-Function/Particular Use
 - Domestic
 - Single dwelling

- Multiple dwelling
- Secondary structure
- Hotel
- Institutional housing
- Camp
- Village site (Archaeology)
- Commerce/Trade
 - Business
 - Professional
 - Organizational
 - Financial organization
 - Specialty store
 - Department store
 - Restaurant
 - Warehouse
 - Trade (Archaeology)
- Social
 - Meeting hall
 - Club house
 - Civic
- Government
 - Capitol
 - City hall
 - Correctional facility
 - Fire station
 - Governmental office
 - Diplomatic building
 - Custom house
 - Post office
 - Public works
 - Courthouse
- Education
 - School
 - College
 - Library
 - Research facility
 - Education-related housing
- Religion
 - Religious structure
 - Ceremonial site
