

Architectural Inventory for the
City of Pittsburgh, Allegheny County, Pennsylvania

Planning Sector 1: Troy Hill

Report of Findings and Recommendations

The City of Pittsburgh

In Cooperation With:

Pennsylvania Historical &

Museum Commission

October 2014

The Architectural Inventory for the City of Pittsburgh, Allegheny County, Pennsylvania, was made possible with funding provided by the Pennsylvania Historical and Museum Commission (PHMC), the City of Pittsburgh, and the U.S. Department of the Interior National Park Service Certified Local Government program.

The contents and opinions contained in this document do not necessarily reflect the views or policies of the Department of the Interior. This program receives federal financial assistance for identification and protection of historic properties. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, as amended, the U.S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, disability, or age in its federally assisted programs. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to: Office of Equal Opportunity, National Park Service; 1849 C Street N.W.; Washington, D.C. 20240.

Abstract

This architectural inventory for the City of Pittsburgh (Planning Sector 1: Troy Hill) is in partial fulfillment of Preserve Policy 1.2, to **Identify and Designate Additional Historic Structures, Districts, Sites, and Objects** (*City of Pittsburgh Cultural Heritage Plan, 2012*). This project is the first phase of a larger undertaking which aims to ultimately complete the architectural survey for all of Pittsburgh's Planning Sectors. The scope of this project provided for the partial completion of Planning Sector 1, including the majority of the Troy Hill neighborhood.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

The purpose of the reconnaissance level survey was to field check all previously surveyed resources within Sector 1, and to identify as many previously unsurveyed historic resources within Sector 1 as possible within the constraints of the scope. The architectural historians surveyed the following resources:

PREVIOUSLY SURVEYED *(includes overlap)*

- 20 Previously Surveyed Parcels – Pittsburgh Register Survey 1993
- 90 Previously Surveyed Parcels – CRGIS
 - 9 Previously Surveyed Parcels – Listed in the National Register of Historic Places
 - 31 Previously Surveyed Parcels – Now Vacant and Parcels with Post-1975 Buildings
- 53 Previously Surveyed Parcels – Now Demolished with Abolished Parcels

- **163 TOTAL** Previously Surveyed Properties in Sector 1, *Resurveyed*

NEWLY SURVEYED

- 1236 Newly Surveyed Parcels – Not Eligible

- 1243 **TOTAL** Newly Surveyed

ELIGIBILITY RECOMMENDATIONS

- 26 Previously Surveyed Parcels – Potentially Individually Eligible for NRHP
- 7 Newly Surveyed Parcels – Potentially Individually Eligible
- 1 Newly Surveyed District, Recommended Eligible – Troy Hill

- **43 Potentially Eligible Resources** Recommended for Intensive Level Survey

This project was administered by the City of Pittsburgh with support from Bureau for Historic Preservation and Archaeology (BHPA) staff. Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards* (36CFR61) for history and/or architectural history. Consulting firms include Michael Baker Jr., Inc., Clio Consulting, and Cosmos Technologies, Inc.

This project was funded in part by a Pennsylvania Historical and Museum Commission (PHMC) Certified Local Government (CLG) grant, the program guidelines of which can be found at http://www.portal.state.pa.us/portal/server.pt/community/grants/3794/certified_local_government_grant_program/417950.

Introduction

In 2013, the City of Pittsburgh received a Pennsylvania Historical and Museum Commission (PHMC) Certified Local Government (CLG) grant for partial funding of an architectural inventory of Pittsburgh neighborhoods. Planning for the survey was conducted in May 2014; the survey was conducted in June 2014; and the report was compiled in July 2014.

The City of Pittsburgh is divided into 16 planning sectors. Each sector contains a number of neighborhoods and is delineated based on a number of factors, including neighborhood and ward boundaries and topographical features. The City has commenced its comprehensive architectural inventory by surveying each Planning Sector in numerical order. Planning Sector 1, Allegheny Hills, contains five neighborhoods. The present survey effort concentrated on the neighborhood Troy Hill, which was deemed to be the most likely to contain a potential national register-eligible historic district. After two weeks of survey work, project historians field-checked all previously recorded resources within City Planning Sector 1 (Figure 1, Appendix B). In addition, they newly surveyed all remaining parcels containing pre-1976 buildings within the Troy Hill neighborhood, except Washington's Landing (Herr's Island), using the PHMC minimum survey requirements (see Appendix A). Survey data were uploaded in real time to the City's Geographic Information Systems (GIS) database via tablet computers. These data were later re-formatted and transmitted to PHMC in a Microsoft Access file in accordance with PHMC's Cultural Resource Geographic Information System (CRGIS) requirements.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

Qualifications

Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards (36CFR61)* for history and/or architectural history. Project historians included Timothy G. Zinn, Jesse A. Belfast, and Katherine Molnar, of Michael Baker, Jr., Inc., and Angelique Bamberg of Clio Consulting. GIS support and project map development was performed by James Brown, E.I.T., and database processing and analysis was performed by Ciara Chic, both of Cosmos Technologies, Inc.

Goals and Objectives

In 2012, the City of Pittsburgh Department of City Planning released its Cultural Heritage Plan as a component of its first comprehensive plan. Resulting from the plan, the need to document was identified with the goal to:

Document the City’s cultural and historic resources in ways that are accurate, meaningful, comprehensive, and useful to the City and the general public.

The Cultural Heritage Plan noted that the Historic Resources Inventory should be a “dynamic, comprehensive list of the City’s historic resources.” Further, according to the plan, the existing inventory of historic resources (over 13,500 parcels identified as being historic on some level) “needs to be field checked and continually updated as physical conditions change and additional resources are listed in the National Register of Historic Places or designated under the City’s Historic Preservation Ordinance” (Cultural Heritage Plan, 112).

To realize these goals, the City prepared policies with corresponding action items in the historic preservation plan. This current field survey is in partial fulfillment of those items, including:

PRESERVE POLICY 1.2 - Identify and Designate Additional Historic Structures, Districts, Sites, and Objects

PRESERVE 1.2-A: Conduct a Citywide Reconnaissance Survey (cursory visual inspection).

Identify areas that are potentially eligible for new listings as City-Designated Historic Districts and National Register Historic Districts. Focus on areas that:

- Have been previously identified as potentially eligible (see Cultural Heritage Plan Appendix B).
- Have a high percentage of structurally-sound and architecturally significant pre-1940 buildings.

Identify individual structures and sites outside of City-Designated and National Register historic districts that are potentially eligible for individual nomination as a City-Designated historic resource and/or for listing in the National Register of Historic Places. Focus on structurally-sound resources that:

- Would not otherwise be part of an eligible historic district.
- Are significant or unique for their architecture and/or engineering.

- Would severely and adversely impact the neighborhood's form, character, or economic growth potential if demolished or negatively altered. (Consider existing and former schools, religious buildings, and civic or quasi-civic spaces such as libraries, parks, fire stations, community centers, etc.).

Therefore, this current survey effort represents the City's initial effort to field check previously surveyed resources within Planning Sector 1 and to identify any previously unsurveyed historic resources within Sector 1, in partial fulfillment of the above-mentioned goal. In addition the City intends to use this project to develop and test a methodology for conducting additional architectural surveys in remaining Planning Sectors in the future.

Methodology

Background Research

Prior to initiating fieldwork, the project team conducted background research and reviewed published literature to identify and obtain sources of information pertinent to the history and architecture of Sector 1 neighborhoods. A review of existing Pittsburgh history texts helped to predict the types of properties that should be expected in the survey area; historic mapping illustrated patterns of development and periods of growth in the neighborhoods.

Another important factor in the background research was a thorough review of the Pittsburgh Historic Resources inventory to identify previously surveyed resources in Sector 1. Consultants also reviewed Pennsylvania's Cultural Resource Geographic Information System (CRGIS) files to identify any additional previously surveyed resources, if not already identified through the City's data.

Reconnaissance Survey

The survey consultants, in consultation with City and PHMC determined that scattered properties should be surveyed which were of historic age (pre-1976) and retained enough integrity to be considered a "contributor" to a potential district (i.e. medium level of integrity or higher), in an effort to understand the overall character of a neighborhood. It was also decided that in areas which could potentially be eligible for listing in the National Register as districts, a building-by-building survey would still be necessary. If building parcels were not old enough, vacant, or had no integrity, then the surveyor could check the respective box on the tablet indicating why the PHMC minimum requirements were not filled in for that resource. Once the survey effort began, the survey consultants decided to photograph all parcels with buildings, regardless of integrity, in areas that had historic district potential because it required minimal effort when the surveyor was entering information on integrity anyway; moreover the photographs enabled project historians to review the condition and integrity assessments after the fieldwork was completed in order to assure consistency in integrity assessments among surveyors.

The survey team consisted of two architectural historians who spent approximately two weeks in the field with tablet computers. The tablets were pre-programmed with county property parcel maps and a fillable database of attribute fields developed by the project team to satisfy CRGIS database requirements (see Appendix A).

The number of hours allotted for fieldwork allowed the survey team to conduct a complete building-by-building survey of Troy Hill (with the exception of Washington's Landing, which was omitted from field survey due to its extensive redevelopment and resultant lack of historic-age buildings) and to field-check and update previously-identified resources of potential significance throughout Sector 1. There was not sufficient time to conduct a building-by-building survey of the other Sector 1 neighborhoods of Spring Hill-City View, Spring Garden, Northview Heights, or Summer Hill. Given this time constraint, the survey team chose to focus on Troy Hill for its number and concentration of resources. Recognizing the area as a potential district mandated that a building-by-building survey be completed in the area.

Members of the survey team found it critical to establish consistency in the use of certain fields at the beginning of the survey. Use of the following fields is explained:

- **Potential Individual Eligibility:** “Yes” was entered for all properties which had been identified as significant or potentially significant in any previous survey. Surveyors also entered “Yes” for a select few properties discovered through background research to have been significant in the historical context of the community (e.g. the Troy Hill Liedertafel and Turnverein) and for properties whose architecture stood out, suggesting that further research on their history was warranted.
- **Potential District Eligibility:** Since potential historic districts were not defined prior to the survey, the entire Troy Hill neighborhood was considered a district for the purposes of the survey. Therefore, if a resource was judged to contribute to a hypothetical neighborhood-wide district, “Yes” was entered in this field. “No” was entered for resources with low integrity (unless special circumstances applied, e.g. a property with low integrity that was obviously a part of a related row or group, whose original characteristics could be gleaned from better-intact examples) and for resources outside of the neighborhood’s period of significance. This was generally considered to be ca. 1850-ca. 1940.
- **Integrity:** For this field, broad categories of “High,” “Medium,” and “Low” were utilized. Resources in the survey area were judged to have some integrity if, despite some alterations, their original character was discernable. A property which had artificial siding but all original trim, windows, and doors intact might be given a rating of “High.” “Medium” was assigned to those which exhibited artificial siding and replacement windows and/or doors, but which retained their original size, scale, rhythm and proportion of openings, and possibly some original ornamentation. “Low” was used for properties with drastically altered facades and/or massing, such that their original character had been obscured.
- **Style:** Correspondingly, where a resource’s original style was evident in its massing, extant detail (such as brackets), and/or characteristic feature (such as mansard roof), that style was entered in this field. Resources with low integrity, where no such clue as to original style remained, were assigned a value of “No Style,” even if context suggested a specific era of construction.
- **Vacant parcels and properties constructed post-1975** were noted with a “Yes” in those fields. Additional fields were not entered for these properties, nor were photographs taken. Parcels that were not occupied by a structure but that were in use (such as parking lots, parks, and gardens), were not defined as “vacant,” but entered as “sites” and assigned a relevant function from the CRGIS-supplied drop-down list.

- The “Year Built” fields were entered after fieldwork was complete and estimated based on materials, method of construction, style, context, and cross-referencing with historic maps.

Database Management

Once the reconnaissance survey was complete, the City GIS department uploaded the results from the platform software to Microsoft Excel. All of the rows in the table were manually checked for accuracy and completeness. Numerous PHMC key numbers needed to be entered in the spreadsheet manually because of missing fields in individual CRGIS records, such as tax parcel, street name and number, and survey code. Similarly, the dates of construction were entered after the field work, based on photographic evidence and historic plat mapping; date estimates listed in CRGIS records and Allegheny County Assessor records were not used as they were generally deemed to be unreliable. After the Excel File was complete, it was used to generate mapping (Appendix B), and tables (Appendix C). The Excel File was sent back to the City for re-upload into the City’s GIS system so that the City would have the most accurate and complete data from the survey. The GIS data concluded the deliverable for the City to incorporate into its Historic Resources Inventory.

PHMC required an update to a Microsoft Access file containing relevant CRGIS records. The City’s Excel File was used to populate data in the PHMC Access database.

Historical Context/Background History

Introduction

Planning Sector 1 lies east of the Parkway North (I-279) on Pittsburgh's North Side and extends to the City's northernmost reaches. It is composed of the neighborhoods of Troy Hill, Spring Hill-City View, Spring Garden, Northview Heights, and Summer Hill. With the exception of lower Troy Hill, which occupies the flat plain along the banks of the Allegheny River, and Spring Garden, which lies in a valley, these are hilltop neighborhoods. They are primarily residential in character and become progressively less dense from south to north, in accordance with changing development patterns as Allegheny City (and, after 1907, the City of Pittsburgh) expanded outward. In Troy Hill, Spring Hill-City View, and Spring Garden, homes typically date from the nineteenth and early twentieth centuries and are sited close together on narrow lots. As the City's Cultural Heritage Plan notes, "Homes on some of the streets have been extensively altered; as such, historic integrity is an issue for these neighborhoods." (Cultural Heritage Plan, "Resource Distribution: Sector 1") Spring Hill-City View, Northview Heights and Summer Hill display examples of post-World War II housing styles, both publicly and privately built.

Like the rest of the North Side, Sector 1 was formed from the "Reserve Tract" of 3,000 acres set aside by the Supreme Executive Council of Pennsylvania in March 1783 to be sold for raising revenue to pay troops who had served the Commonwealth in the war for American independence. The tract included all of the land north of the Allegheny and Ohio rivers between the mouth of Woods Run on the west, that of Girty's Run on the east, and an irregular line connecting the points where the two creeks flowed into the rivers on the north (Canning).

The first American landowner in the Reserve Tract was Captain George Wallace, who had been appointed by Benjamin Franklin as the first Common Pleas Court Judge in the newly formed Allegheny County. In the 1780s and 90s, Wallace purchased several hundreds of acres of forested land stretching from the present-day East Street valley to the border of Millvale. He was followed by Heinrich Richenbach Sr., a native of the Basel region of Switzerland who first arrived in Allegheny Town in 1808. Richenbach's acquisition of property along the north bank of the Allegheny, near the present location of the 16th Street Bridge, proved critical in shaping the future Germanic character near Troy Hill, Spring Hill, and Spring Garden.

Upon Richenbach's return to Switzerland several years later, he convinced his family, which included the family of Nicholas Voegtly Sr., to migrate to America. In 1823 the Voegtly and Richenbach families bought a 161-acre piece of property, extending from the river up the hillside, from the estate of James O'Hara. Their property was just east of the existing German neighborhood on Allegheny's east side (Lowry).

These Swiss families developed cotton mills in the area, and job markets created by their investments encouraged German-speaking immigrants to settle on or near their property (Canning). The neighborhood in the vicinity of Voegtly and Rickenbach Streets became known as the Schweizer Loch, or

“Swiss Hole,” owing to its lowland location. It is important to note that at the time most of the German-speaking immigrants in western Pennsylvania arrived, modern Germany did not yet exist; the German-speaking lands of Europe consisted of several smaller countries that were not politically unified, as well as parts of the Austro-Hungarian empire. Therefore, to refer to the communities of Sector 1 as “German” is really to define them by a shared language, when their residents came from many different homelands (Shaughnessy, 7).

During the mid-nineteenth century, the town of Allegheny – laid out as a farming village in 1783 and incorporated in 1840 – prospered, grew, and urbanized, aided by the completion of the Main Line of Public Works (a canal and rail system between Pittsburgh and Philadelphia) along the Allegheny River in 1834. The system’s Western Division, between Pittsburgh and Johnstown, was finished even earlier, in 1829. In Swiss Hole, lead and iron works, textile and glass factories, a flouring mill, and John Straub’s Brewery were established near the Voegtly’s cotton mills along the river and canal. Sawmills and wood-working shops also occupied the northern banks of the Allegheny River, which brought lumber from northwestern Pennsylvania’s forests. In the 1850s, the railroad supplanted the canal as a means of transporting materials and products to and from the area.

A major industry centered in Sector 1 was the butchering and processing of livestock in slaughterhouses, rendering factories, and tanneries. Stockyards occupied Herr’s Island, and related businesses, including soap and candle factories, glue and fertilizer works, harness and saddle makers, bellows makers, and shoemakers, employed residents of the Spring Garden Valley. Additionally, the western slope of Spring Hill, overlooking the East Street valley, was quarried for stone and clay for making brick (Rooney and Peterson, 60-61).

These quarries were likely the source for the masonry used to construct the Allegheny Water Basin in 1848. This reservoir – 412 feet long, 225 feet wide, and 15 feet deep – occupied seven acres on the western side of Troy Hill on the site of what is now the Cowley Recreation Center. The Allegheny City Committee on Water purchased the property from Nicholas Voegtly, Sr. The reservoir served Allegheny City throughout the nineteenth century. Stones from the reservoir may be seen near the spray park at the Troy Hill Playground, but it is not known if they are part of an intact reservoir wall or have been relaid.

While these industries dominated the flats and valleys, the hilltop communities of Troy Hill, Spring Hill, and the Spring Garden and East Street valleys were still a mostly agricultural hinterland before the Civil War. Only a few streets, like Troy Hill Road and Itin Street, provided access and allowed produce to be brought from the hilltop farms and orchards to market in Allegheny City.

The hilltops’ rural character began to change in the 1870s as a result of the real estate investments of Adam Reineman, a former Chambersburg resident and wealthy president of the German Trust and Savings Bank of Pittsburgh, who resided on Lowrie Street in Troy Hill. Reineman purchased a large amount of land in Troy Hill and Spring Hill, which he and his heirs subsequently subdivided and sold to other German families over the next few decades (Rooney and Peterson, 31). In 1887, an incline was constructed on Troy Hill, part of a pattern of development of a “unique hillside system of steps and

funicular railways” which sought to conquer the challenges of Pittsburgh’s – and Allegheny’s – steep terrain (Cultural Heritage Plan, “Industrial Period: 1850-1940”). The 370-foot incline opened Troy Hill to more rapid residential development by making the hilltop more accessible for workers and families seeking to move away from the more industrialized flats. The Troy Hill incline operated until 1898.

In their recent history of Allegheny City, Dan Rooney and Carol Peterson state that “(e)ven as western and central Allegheny City strengthened its economic and social links to Pittsburgh, the city’s heavily German eastern neighborhoods remained a community apart” (Rooney and Peterson, 99). In Troy Hill, Spring Hill, and the Spring Garden and East Street valleys, residents spoke German, conducted business and worship in German, had their own German language newspaper, and participated in German singing, social, and cultural societies.

While German language and institutions defined the dominant culture, Allegheny’s burgeoning economy brought immigrants from many other countries, as well. The earliest English settlers were followed by Scots, Irish, and Scotch-Irish. Croats formed a strong community south of East Ohio Street and east of Chestnut Street. Immigrants from Bohemia (now the western part of the Czech Republic) also settled in this area, then moved northward into the western end of Troy Hill (known as “Bohemian Hill”) and the adjacent part of Spring Garden during the late nineteenth century. Other ethnic groups included Lusatian Serbs, Slovaks, Carpatho-Russians, Ukrainians, and Greeks. The sector’s residential neighborhoods were dotted with religious institutions representing the many faiths of these immigrant groups, including Episcopalian, Presbyterian, Lutheran, Methodist, Roman and Byzantine Catholic, Eastern Orthodox, and Jewish.

As Allegheny grew economically, it sought political expansion by annexing surrounding communities. Troy Hill, the East Street valley, and lower Spring Garden were annexed in 1868 (see Plate 1, next page). After Allegheny itself was annexed to Pittsburgh in 1907, the North Side continued to expand, adding Spring Garden Borough in 1910 and Summer Hill and Northview Heights in 1922 and 1932, respectively. The latter areas became the locations of new kinds of housing developed in the mid-twentieth century to address the needs of a burgeoning post-war population and the problems of a declining older community. In the 1980s, construction of a new expressway, I-279, demolished significant sections of Sector 1 and cut it off from its sister communities to the west.

Several factors contributed to these circumstances. The Great Depression, followed by World War II, resulted in a long deferral of maintenance to the area’s infrastructure and building stock. Meanwhile, mobilization for war brought about an expansion of Pittsburgh’s steel, machinery, and food-processing industries and caused a massive redistribution of the workforce to Pittsburgh. Pittsburgh consequently gained population in need of housing at a time when homelessness and poor housing conditions were especially widespread.

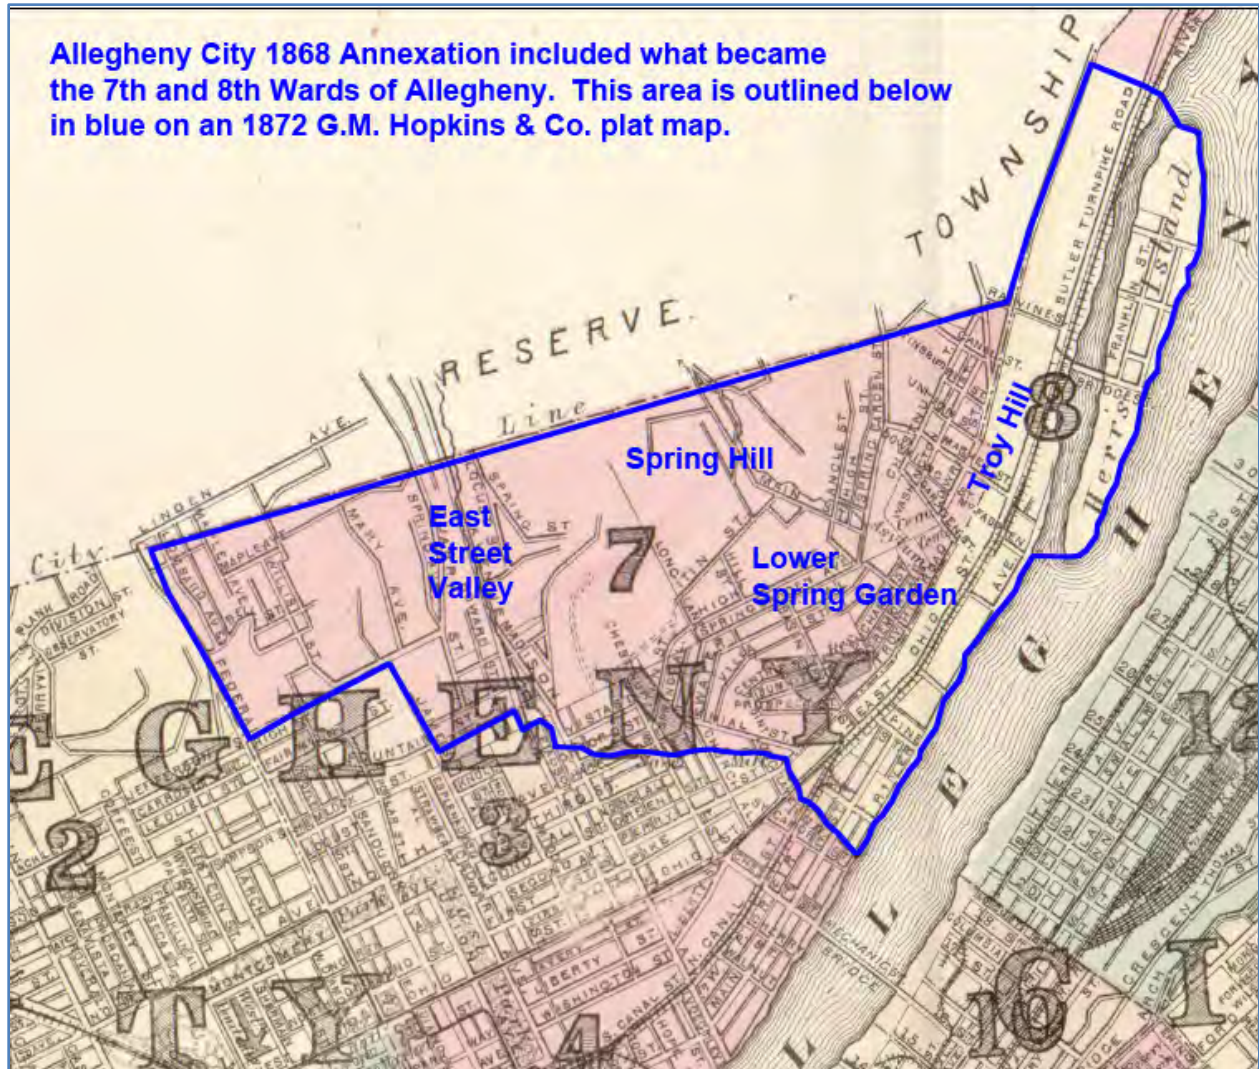

Plate 1: Allegheny City 1868 annexations of parts of Reserve Township (Allegheny Ward 7) and Duquesne Borough (Allegheny Ward 8).

In 1937, the Federal government established a public housing program to aid low-income families in attaining decent, affordable housing. The Pittsburgh Housing Authority was on the vanguard of the public housing movement nationwide, securing federal funding for three projects in the Hill District immediately after the United States Housing Authority was established. According to progressive housing theories of the time, public housing favored large-scale, master-planned, multi-family “projects” of high-rise or garden apartments which were set apart – physically and consequentially, socially – from the older, traditional communities in which they were built. Since there was not room to construct such projects in existing neighborhoods, which had been densely built up in the nineteenth century, the Housing Authority looked to remoter sectors of the city and to hilltop sites which were not desirable to private developers. One such area was the hilltop north of Spring Hill. Northview Heights joined the Pittsburgh Housing Authority’s portfolio when it was constructed on formerly vacant land between 1955 and 1962.

At around the same time, in 1959, the nonprofit housing advocacy agency ACTION-Housing constructed Spring Hill Gardens, a federally-backed, large-scale rental apartment project which was notable for its deliberate racial integration at a time before federal fair housing laws prohibited segregation or discrimination in the housing market.

The 1950s and 60s also saw a nationwide boom in suburban housing construction and a corresponding shift in population from urban to suburban neighborhoods, which also affected transit habits, patterns, and desires. The federal government abetted suburban growth in many ways, including construction of an interstate highway system, ostensibly to move troops in the event of a national emergency. Sector 1 experienced the construction of an interstate highway spur, I-279, through the East Street Valley to create an efficient route between the city and the new suburban communities burgeoning in the North Hills. Planning and property acquisition took place between 1967 and 1982, and the highway was completed in 1989.

Parishioners of St. Boniface Roman Catholic Church, which was originally slated for demolition, persuaded the Department of Transportation to alter the route to spare this building. However, hundreds of other properties in the East Street Valley were taken by eminent domain, and the road became a major barrier separating formerly connected communities. The URA's Harpen Hilltop development in Summer Hill served to receive moderate-income residents of the East Street Valley displaced by property acquisition for the highway.

Troy Hill

The neighborhood of Troy Hill was founded as the village of New Troy – named after the New York state hometown of the area's original landowner, Elizabeth Seymore – in 1833. Settlement of the neighborhood by German immigrants began in the 1840s and swelled until its peak in 1900.

By the middle of the nineteenth century, this portion of the Reserve Tract was sufficiently populous and prosperous to merit its own municipality. On April 5, 1849, the Pennsylvania Legislature passed an act creating the Borough of Duquesne. Duquesne included all of Herr's Island and extended northward from the river bank up the steep slope of Troy Hill to the middle of Lowrie Street. On the west, it was bounded by the city line of Allegheny (presently Chestnut Street) and on the east, by the original boundary of the Reserve Tract (Girty's Run). Duquesne was annexed by Allegheny City in 1868.

Property atlases of Troy Hill from the 1870s and 1880s show intensive industrial development along the Allegheny riverbanks and Western Pennsylvania railroad line. Large houses on spacious lots stood north of Troy Hill Road between Gardner and Rialto Streets. West of Gardner Street lay two large properties, St. Joseph's Orphanage and a Catholic cemetery; west of these, between St. Joseph's (on the east) and the Allegheny Reservoir and a block of tanneries (on the west), was a residential neighborhood much more densely developed with frame houses along Herman, Buchanan, Tripod, and Return Street. East of the reservoir, land owned by the Voegtly family was being subdivided for development. East of Rialto lay the German United Evangelical Protestant Cemetery and a large tract owned by Adam Reineman.

Troy Hill's further development through the end of the nineteenth century was closely tied to the real estate investments of Reineman and to the construction of the Troy Hill Incline. Reineman's purchase, subdivision, and sale of property drew many German residents to the neighborhood, where they lived, opened businesses, and participated in the social life of the community. This was centered on churches, social halls, singing groups, gymnastic associations (Turnvereins), and parades and festivals that recreated those from residents' hometowns in Hesse, Swabia, Alsace, Bavaria, Prussia, and Bohemia. The former Troy Hill Turnverein survives as an American Legion hall on Hatteras Street, and a building at the corner of Sundeman Street and Liedertafel Way appears to be the (much-altered) Troy Hill Liedertafel, or singing society, present by 1901.

The Troy Hill Incline was built by Samuel Diescher in 1887 and operated until 1898. The incline's lower station was located across from the northern end of the 30th Street Bridge and its upper station building still stands at 1733 Lowrie Street.

Most of Troy Hill's residents were blue-collar workers, but wealthier business owners, such as brewery partners Eberhardt and Ober, land baron Adam Reineman, and publisher Victor Scriba lived in the neighborhood as well, particularly in the earlier-developed, more spacious sector east of Gardner Street. Reineman conducted real estate transactions from an office in an addition to his Second Empire style home, which is still standing at 1517 Lowrie Street, its original clock tower removed. Reineman's earlier home, a Greek Revival style house on this site which he inhabited from 1864-1876, is said to have been moved "a short distance away" to allow for the later house's construction (Yanosko, 23). This is likely the house at 1525-1527 Lowrie Street.

One of Reineman's brothers, Louis, was a partner in a jewelry firm who also invested in local real estate. His house stands at the intersection of Ley and Rialto Streets. The Eberhardt House is at 1814 Harpster Street and the Ober-Guehl House at 1501 Lowrie Street. The Eberhardt carriage house also survives as an apartment building at 1814 Eberhardt Street.

News in Troy Hill was circulated via the German language newspaper *Freiheits Freund* ("Freedom's Friend"), the oldest such paper west of the Alleghenies. In the nineteenth century, *Freiheits Freund* was published by Victor Scriba. Scriba first lived with his wife Caroline on Progress Street in East Allegheny but later constructed an Italianate estate called Scriba Place above Troy Hill. The Pittsburgh City-Reserve Township line passes directly through the Scriba home, which still stands at 1 Scriba Place.

By the turn of the twentieth century, the western sector of Troy Hill above Troy Hill Road was occupied by a Bohemian community known as "Bohemian Hill." The majority of this group was Roman Catholic and worshipped at St. Wenceslaus Catholic Church on Progress Street, named after the patron saint of Bohemia. There was also a minority group of Czech Protestants who formed their own congregation. In 1908, they built the First Bohemian Presbyterian Church at 1023 Province Street (renamed Troy Hill Presbyterian Church in 1926). Both of these churches still stand.

Another significant immigrant group whose architectural history has all but disappeared was the Croatians (with the exception of St. Nicholas Church in Millvale—just over the City line). In the nineteenth century, the flat plain along the Allegheny River east of Chestnut Street was settled by

immigrants from Jastrebarsko, a town near Zagreb, and became known as “Mala Jaska.” Here, frame houses built directly into the hillside coexisted with industries such as slaughterhouses, rendering factories, and tanneries between the 16th Street Bridge and Allegheny’s border with Millvale to the east. Flooding perpetually troubled this plain, and today it is dominated by PA Route 28, which begins at East Street and follows the Allegheny River north. Construction and widening of Route 28 decimated the residential precinct of Mala Jaska, and its house of worship, St. Nicholas, North Side Roman Catholic Church, was demolished in 2013.

Other, extant churches in the Troy Hill community include the Roman Catholic Most Holy Name of Jesus at Claim and Harpster streets (built 1866-1868; expanded 1875, 1877, 1898) and Grace Lutheran Church, built in 1899 (Tinsbury and Hatteras streets). Most Holy Name contains a notable Second Empire style rectory and the nationally-known St. Anthony’s Chapel, which displays the collection of relics belonging to Holy Name’s first pastor, Fr. Suitbert G. Mollinger, and is believed to be the largest public collection of relics in the world. Grace Lutheran served not only German immigrant families but an influx of Pennsylvania Railroad employees who moved to Troy Hill in the 1890s when the company’s local caller, who scheduled the crews, was assigned to Troy Hill. This church contains a pipe organ underwritten by Andrew Carnegie and installed in 1906.

The Troy Hill neighborhood also includes Herr’s Island, an island in the Allegheny River, now popularly known as Washington’s Landing. Herr’s Island was named for an early owner, Benjamin Herr, who used the island for farming. By 1872, Herr’s Island contained oil refineries, saw mills, and the Graff Tube Works. Later, Herr’s Island became occupied by stockyards among the largest in the United States, advantageously located adjacent to the Pennsylvania Railroad. Swine were driven from these stockyards over Troy Hill via Rialto Street (thus nicknamed “Pig Hill”) to be slaughtered at packing plants on Spring Garden Avenue. Today little evidence of these uses remains on the island. It was the site of a 42-acre brownfield redevelopment with upscale housing, parkland, and offices in the 1990s.

Extant landmarks from other prominent Troy Hill industries are the H. J. Heinz food plant and buildings of the Eberhardt and Ober Brewery, both comprising National Register historic districts.

The City’s Cultural Heritage Plan notes, “The greatest opportunities for historic preservation in Sector 1 occur in Troy Hill... particularly along Lowrie Street and Voskamp Street [n.b. Voskamp Street is actually in Spring Garden] where late 1800s homes and churches with impressive architecture strongly contribute to the character of the neighborhood.” There is one City-designated Historic Landmark in Troy Hill, the Shrine of St. Anthony of Padua (1700 Harpster Street), and two National Register listed historic districts: the H. J. Heinz Plant and Eberhardt and Ober Brewery.

Spring Hill-City View

Spring Hill-City View is located on the hillsides and hilltop just above East Allegheny and western Troy Hill. The East Street and Spring Garden valleys physically divide this neighborhood from those to the east (Spring Garden) and west (Fineview); the neighborhood is generally bounded by Goehring and Itin streets on the south and Reserve Township and Northview Heights on the north. The building stock is

primarily single-family residential built before 1940, interspersed with several churches, the most significant of which is the National Register-eligible St. Boniface Roman Catholic.

Spring Hill was named for natural underground springs in the area. The German immigrants who settled in the area between 1850 and 1920 gave many of the streets German names such as Rhine, Woessner, Haslage, Zoller, and Goehring. As recently as 1977, a Pittsburgh neighborhood profile described Spring Hill as having a “Bavarian atmosphere” (Pittsburgh Neighborhood Alliance).

Settlement of Spring Hill began along East Street, which was lined with a mix of residences and industries, including an oil works, a tannery, and a glue factory, by 1872. A smaller concentration of frame dwellings was present along what is now Rhine Street on the east side of the neighborhood. In between were large parcels of property and a scattered few homes. South Side Avenue and Luella Street were laid out by 1876, but there were few residences. The 1882 Hopkins atlas shows the Bell and Weis Quarry above Vista Street in the vicinity of what are now Kaiser Avenue and Vallette Street. Also by this year, the German Evangelical Lutheran Church held the parcel which is now occupied by St. John’s Cemetery. The Allegheny City line then ran through the middle of this property, with Reserve Township to the north.

Development occurred rapidly through the turn of the twentieth century. By 1901, most of the large estates between Long Lane (now Lappe Street) and the continuous border of St. John’s Cemetery had been subdivided, and about half improved with frame houses. East of Long Lane, large tracts held by the Voegtly, Hesperheide, Hetzel, and other German families remained interspersed with blocks of new development. The northern portion of the neighborhood was annexed in 1922, putting the city line at roughly Essen Street. Property atlases from the 1920s and 30s show several residential subdivisions in this area that do not appear on current maps; the Depression likely stalled many developers’ and residents’ plans to build.

In 1959, ACTION-Housing – a nonprofit agency established in 1957 to focus on the needs of moderate-income families who earned too much to qualify for public housing but too little to purchase housing at market costs – constructed Spring Hill Gardens, a 209-unit apartment complex at Buente and Rhine streets. Backed by the Federal Housing Administration, Spring Hill Gardens was an experiment in racially-integrated rental housing, seeking to demonstrate that “moderate integration” of multi-family housing was both socially and commercially feasible. Spring Hill Gardens was sold to a realty company in 1965 (Lubove, 148). It should be evaluated within the context of housing policy and development during the urban renewal era.

During the late 1960s and 1970s, the Department of Transportation acquired properties in the East Street valley for the right of way of a new expressway, I-279. The road was built in the 1980s. Parishioners of St. Boniface Roman Catholic Church (A. F. Link, 1926) succeeded in having the church and school listed in the National Register of Historic Places in 1981 and preserving it from demolition for the highway. St. Boniface is the only listed property in Spring Hill-City View, though the Spring Hill School at 1351 Damas Street has been determined eligible for listing in the National Register. Pittsburgh’s

Cultural Heritage Plan notes, “Although there is not a large grouping of historic assets, there are preservation opportunities for single structures with historic significance.”

Spring Garden

Spring Garden is a narrow neighborhood which follows the floor of the valley that separates the two adjacent hilltop neighborhoods of Spring Hill and Troy Hill. Like those neighborhoods, Spring Garden was initially settled by the descendants of German-speaking people who had emigrated from Europe to East Allegheny in Allegheny City. The compact scale of the valley resulted in a tight pattern of development that allowed these initial residents to walk to their places of employment, which included slaughterhouses, meat packing concerns, rendering factories, and tanneries located along Spring Garden Avenue. The concentration of such industries led to the neighborhood’s stream, Saw Mill Run, being nicknamed “Butcher’s Run.” At least one former tannery, the Woelfel and Linke Tannery, still stands between Spring Garden Avenue and High Street at Old Honesty Street.

By 1872, both Spring Garden Avenue and High Street were already densely developed with residences and tanneries to the city line at Wickline Lane. Voskamp Street, then called Villa Street, followed the northern boundary of the Allegheny Reservoir and was only slightly less built up.

North of Wickline, Spring Garden was then an independent borough defined by its present neighborhood boundary. Development was less dense in this sector, with fewer industries, small concentrations of frame houses at intervals along Spring Garden Avenue, and larger parcels beyond. The greatest concentration was the intersection of Spring Garden Avenue and Mutzig Street (presently Schubert Street). By 1897, Spring Garden had a post office, the Mutzig Post Office, on the western side of Spring Garden Avenue south of the intersection. A church was located north of the intersection, and behind it was the house of J. Mutzig and the Spring Garden Public School. Spring Garden Borough was annexed to Pittsburgh in 1910.

A 1974 City Planning profile of Spring Garden explained that, “Historically, this neighborhood, because of its location and convenience for industrial expansion out of the valley floor from the East North Side, has been of mixed industrial and residential uses. Today, the industrial uses are becoming marginal due to the lack of room to expand. This has left mostly row-type residential uses to survive along the narrow streets on the valley floor and hillsides.” According to the City’s Cultural Heritage Plan, “Historic homes along Voskamp Street and High Street with Italianate architecture offer strong opportunities for preservation.” Most of these houses are from the 1870s and 1880s or earlier and of frame construction. They include many one-story cottages, a housing type rare in Pittsburgh. These should be assessed for their number, integrity, and preservation potential.

A few churches also remain which have associations with Spring Garden’s immigrant community. St. Peter’s Lutheran Church (now United Church of Christ) at 18 Schubert Street had been constructed by 1906 on the site of the Mutzig house.

The proximity of previously-identified resources to one another in Spring Garden suggests the presence of a possible historic or conservation district.

Northview Heights

Northview Heights was part of Reserve Township until it was annexed to Pittsburgh in 1932. At that time, the neighborhood was mostly vacant land, isolated by its topography from Spring Hill to the south and Summer Hill to the north. Between 1955 and 1962, the Housing Authority of the City of Pittsburgh developed this land into a 999-unit public housing project, a combination of high-rise and attached row units, called Northview Heights. Due to both topography and design, Northview Heights is isolated from neighboring communities. It is served by its own elementary school, Pittsburgh Northview. Northview Heights should be evaluated within the context of public housing in Pittsburgh.

The City's Cultural Heritage Plan places Northview Heights among neighborhoods that "offer limited opportunities for preservation." A previous survey (the 1993 Pittsburgh Register of Historic Places) identified a ca. 1840 Greek Revival farmhouse at 101 Hazlett Street; however, the location of such a house is not consistently shown on historic property atlases. These maps do appear to show a mid-nineteenth century house at nearby 136 Chicago Street.

Summer Hill

Summer Hill is the northernmost neighborhood in Pittsburgh and was part of Reserve Township until its annexation in 1922. It owes its distinctly suburban character to its post-World War II era of development. After the war ended, returned veterans and their families created great demand for new housing, while stipulations for federally-backed mortgages under the G.I. Bill supported veterans' purchase of new homes in suburban settings. At the same time, federal urban renewal and highway construction programs were displacing many residents of traditional urban neighborhoods, creating a need for relocation housing.

Land in Summer Hill remained sparsely developed until the North Side Civic Development Corporation constructed a residential development called Harpen Hilltop on 51 acres in the late 1960s. The URA acquired and prepared the land for development of 373 modest detached homes, plus a 272 unit high rise. Priority for residence in Harpen Hilltop went to moderate-income residents of the East Street valley who were displaced by the construction of I-279. City Planning maps from 1974 refer to the area as "Harpen Hilltop" and also refer to a nearby "Ivory Avenue" district, but by the time a 1977 neighborhood atlas was produced, the name "Summer Hill" was in use for both areas.

The City's Cultural Heritage Plan places Summer Hill among neighborhoods that "offer limited opportunities for preservation," and previous surveys have identified no potential historic resources in this area. However, post-war suburban development and urban renewal and its consequences – such as dislocation and relocation of residents of areas taken for highway construction by eminent domain – are historical contexts of emerging significance, and the Harpen Hilltop development should be evaluated within these contexts.

Results

Summary of Findings

The results of the re-survey of previously-identified listed or potentially significant resources are displayed in Table 2. A listing of the status of all previously-surveyed properties with valid present tax parcels is displayed in Table 3. Previously-surveyed properties whose tax parcels have been abolished are listed separately in Table 4, as explained below. The location of previously surveyed properties is shown in Figure 2 in Appendix B.

The building-by-building survey of Troy Hill revealed an area with a fairly even distribution of resources with medium-to-high integrity and potential district eligibility. Rather than suggesting boundaries for one or more smaller historic districts, these data encourage contemplation of a single historic or neighborhood conservation district encompassing the entire hilltop portion of Troy Hill. The part of Troy Hill located on the river flats includes the area's two most intact industrial complexes, the former Heinz plant and the Eberhard and Ober Brewery, both of which are already listed in the National Register (although not designated by the City). The Troy Hill flats have greater continuity with the adjacent neighborhood of East Allegheny (Deuschtown), which has not been surveyed as part of the current effort. Due to extensive, recent redevelopment, Washington's Landing was not surveyed. Also, a section of the east side of Spring Garden Avenue (containing four buildings between 1541 and 1575 Spring Garden Avenue), was not surveyed since it is physically in the Spring Garden Valley, though it is technically within the official Troy Hill neighborhood boundaries.

A parcel by parcel update of the majority of the properties previously surveyed by Andrzejewski et al. (1996) and Andrzejewski and Holst (1998) for the State Route 28 Project and those surveyed for PennDOT for the I-279 project in the 1980s and earlier was not possible using the computerized data entry method based on current tax parcels because most of the tax parcels in these areas were abolished and consolidated when PennDOT acquired the properties for highway right-of way. Those CRGIS records that could be confirmed as being in Sector 1 and whose associated tax parcels have been abolished are summarized in Table 4. No pre-1976 buildings exist on Rialto Street below Lowrie Street; on East Ohio Street east of its intersection with Chestnut Street to the City Line; on River Avenue east of the H.J. Heinz Plant to its terminus at 31st Street; and on the entirety of Herr's Island.

Types of Properties

The survey area as a whole (excluding Washington's Landing) consists predominantly of small-scale, two- to two-and-a half-story residences, attached or in densely-built detached rows, which originally housed a community of German-speaking immigrant workers and their families in the mid to late nineteenth century. Also represented in Sector 1 is a housing type atypical of Pittsburgh in general, the one-story workers' cottage. Among these small-scale workers' houses still stand the substantial, architecturally imposing homes of the community's most affluent and influential citizens, including the Ober-Guehl House (1501 Lowrie Street), Eberhardt House (1814 Harpster Street), homes of Adam

Reinemann (1515-1517 and 1525-1527 Lowrie Street) and Louis Reinemann (1706 Rialto Street), and the Victor Scriba House (1 Scriba Place).

With the exception of these addresses, the resources surveyed were mostly vernacular examples of the Greek Revival, Italianate, and Second Empire styles, reflecting the period of greatest building activity in the area (ca. 1850-1900), and frame construction is common. Building in the neighborhood continued into the first third of the twentieth century, resulting in the presence of resources in the Colonial Revival, Classical Revival, and Arts and Crafts/Bungalow styles, as well. Little was built after about 1940, but there is a concentration of small houses dating from the early 1960s on Rialto Place and the west side of Sundeman Street on the site of the former Bader greenhouses. The Queen Anne style Bader estate house still stands among them southeast of the intersection of Rialto Street and Mt. Troy Road. The survey area contains a number of vacant lots but they are distributed throughout the district, so that their presence does not compromise its overall feeling of density.

Troy Hill does not have a strongly-defined commercial core, but commercial buildings tend to be concentrated on Lowrie Street and, to a lesser extent, the western end of Ley Street, with occasional storefronts found in buildings throughout the district. Most of these scattered storefronts are no longer in commercial use; some are vacant and others have been converted to residential use. Churches are also found interspersed in the neighborhood and there is one large cemetery, the German Evangelical Protestant Cemetery (known locally as the Voegtly Cemetery), at 1955 Lowrie Street. A few former hotels in Troy Hill housed visitors who came to experience the religious relic collection housed in St. Anthony's Chapel. Social halls built by the area's original German community are also still present. The campus of North Catholic High School (now closed) occupies much of the block between Troy Hill Road and Lowrie Street west of Gardner Street; its main, Art Deco building was erected in 1940 on the site of the former St. Joseph's Roman Catholic Orphan Asylum. A brick stable on that property, in addition to the former Ober stable on Lowrie Street and the upper station of the Troy Hill incline, are remnants of past modes of transportation and freight. The Cowley Recreation Center, built in 1939, stands on the site of the former Allegheny City Reservoir. Historic industries represented in the survey area include animal slaughtering/tanning, brewing, and food processing.

Together, these resources complete a picture of a neighborhood which housed residents of a broad socio-economic range in close proximity, and where business owners and workers shared a community and a culture.

Integrity and Condition

Due to the presence of so many resources which made up the community at its height, there is strong integrity of feeling and association within the survey area. Integrity of materials, design, and workmanship are not as strong. Almost all properties in Sector 1 have been altered in some way, most prevalently through the installation of artificial siding and/or the alteration of original openings and/or porches. Additions which alter massing are present in the survey area but less common due to the tight siting of most properties. Individual resources whose original materials, design, and workmanship have

been maintained or restored are rare. The era of most of these alterations appears to be ca. 1940-1980 with many resources evincing deferred maintenance.

Recommendations & Conclusions

Because this survey was designed to serve both the City of Pittsburgh and PHMC, recommendations have been formulated for potential National Register eligibility evaluations and for the use of survey data under the City of Pittsburgh's historic preservation ordinance. We also bear in mind that successful historic preservation may take place independent of formal designation. Other recommendations pertain to properties meriting intensive level study, and the overall methodology of this initial survey effort, in general.

Eligibility of Resources for National Register and City Listing

The entirety of the Troy Hill neighborhood as presently designated by the City of Pittsburgh was surveyed during this effort, excluding Washington's Landing (due to the extent of modern redevelopment) and portions of the "flats" along the Allegheny River. Generally, all buildings were demolished in the Troy Hill flats east of the Heinz Plant (1300 block of River Avenue) between 2010 and 2012 for the reconstruction of State Route 28 along the East Ohio Street corridor. Washington's Landing (Herr's Island) and the river flats were not historically known as Troy Hill, as this designation applied only to the hilltop district. Surveyed properties were evaluated for integrity, and given a "High," "Medium," or "Low" rating. Vacant and demolished parcels were also notated in the tablets during the survey. Mapping of these property attributes (integrity and vacancy) shows a well-distributed pattern of levels of integrity and vacancy, thereby giving no clear concentration of pockets of high-integrity structures (Figures 3 and 4). At the same time, the hilltop portion of the neighborhood exhibited many characteristics of a potential National Register historic district (see Figure 5 for recommended boundaries).

The National Park Service defines a district as a type of resource that "possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development" (*National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, 2002). One of the most striking features about the Troy Hill hilltop is its unusual density of historic-age residences, aligned in their historic plat/layout. While the individual buildings have a mixture of integrity levels, and integrity concerns, the concentration and continuity of features makes the place unique. The residential buildings retain their original scale, setback, and massing; many of the exterior materials have changed. Most importantly, the interrelationship between the features "convey a visual sense of the overall historic environment" (*National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, 2002).

In terms of significance, the potential Troy Hill district is likely to have significance under Criterion A, meaning it is important in association with events that made a significant contribution to the broad patterns of our history. The neighborhood was developed primarily by immigrants from German-speaking countries of Europe whose ethnic influences were significant in the development of Pittsburgh's North Side.

Treating the Troy Hill neighborhood as a potential National Register district, with the future possibility of it being listed in the National Register and/or designated as a City Conservation District, is in agreement with the Cultural Heritage Plan's recommended "opportunity" for Sector 1:

"Target maintenance programs to deteriorating blocks of pre-1940 homes. Preserve historically significant structures on Lowrie Street, Voskamp Street, and the immediately surrounding areas in Troy Hill and Spring Garden. Use infill construction practices in Troy Hill, Spring Garden, and Spring Hill-City View that complement the historic architectural styles and streetscape pattern of narrow lots. Encourage stabilization and reuse of structurally-sound buildings with significant historic architecture. Promote the German and Austrian ethnic influences that contribute to the character of Sector 1."

New infill housing in a National Register-listed or -eligible district, if done in cooperation with federal funding (through the Urban Redevelopment Authority, for example) would need to conform with the *Secretary of the Interior's Standards for the Treatment of Historic Properties*. Demolitions would be treated in a similar fashion, as many of the City's demolitions are done in part with federal Community Development Block Grant (CDBG) dollars. A full Section 106 review would need to take place prior to the demolition of a contributing resource within a listed or eligible district.

Designation of Troy Hill as a City Historic District may not make as much sense, as most of the buildings in the neighborhood already have some non-original materials or replacement features; under the "grandfather clause" of the City of Pittsburgh Historic Preservation Ordinance, such materials and features extant at the time of historic district designation may be maintained and/or replaced in kind in perpetuity.

The most suitable type of City designation for Troy Hill is, therefore, a Neighborhood Conservation District, whose goal would be to preserve the overall character of the neighborhood without detailed review of individual changes to building materials or design. The City does not currently have legislation permitting the designation or administration of Neighborhood Conservation Districts, but is studying the concept for potential future implementation. If Conservation Districts were to be enabled through City ordinance, protections within such districts would entail design review of all proposed new construction (of a pre-established size or percentage) and review of all proposed demolition. These activities presumably would be reviewed by the City's Historic Review Commission.

- 1. Recommend the Troy Hill Historic District be determined eligible for listing in the National Register of Historic Places.***
- 2. Recommend the Troy Hill Historic District be supported for designation as a City of Pittsburgh Neighborhood Conservation District, if that type of zoning overlay were to be enabled in Pittsburgh.***

Use of Survey Data by City of Pittsburgh

Eligibility for the National Register is not determinative of eligibility for City historic designation. Moreover, it is not the policy or practice of the City of Pittsburgh to initiate nominations for city historic designation (or, presumably, future Neighborhood Conservation District designation), but rather to evaluate and act upon nominations submitted by community members, organizations, and leaders. Therefore, recommendations for use of survey data by the City of Pittsburgh pertain to the Historic Review Commission's responsibilities under the City of Pittsburgh Historic Preservation Ordinance, §1101.07(b), to:

- Carry on educational activities in furtherance of the purpose of [the Historic Preservation Ordinance];
- Act in an advisory role to City departments and agencies related to preservation matters;
- Act as a catalyst to expedite the flow of projects through departments and agencies;
- Facilitate the redevelopment of historic structures and districts in accordance with approved development plans of the city;
- Act as liaison on behalf of the City with preservation organizations, professional societies, community and other groups, private property owners, and interested citizens, concerning conservation of the historic resources of the city;
- Act as a liaison on behalf of the City with the state Historic Preservation Officer, agencies of the federal government, the National Advisory Council on Historic Preservation, and the National Trust for Historic Preservation, concerning the historic resources of the city;
- Prepare plans for the conservation and development of historic resources;
- Undertake or encourage and facilitate the documentation of the architecture and history of the City's historic resources.

In furtherance of these goals, it is understood that the Department of City Planning intends to fully integrate the list of Potential Individually Eligible Resources and other survey data into its Geographic Information Systems (GIS), so that it may serve as a tool in all aspects of implementing the City of Pittsburgh's comprehensive plan.

In order to keep Architectural Inventory survey data up to date, it is recommended that the Department of City Planning coordinate with other city and county agencies to obtain and periodically update the Architectural Inventory database with information related to building construction or demolition. For example, on a regular basis data related to building demolitions and construction could be cross referenced with data from the Bureau of Building Inspection and Allegheny County Assessor. Such interim data updates could utilize City Planning interns and would not typically require field checking.

As City Planning completes surveys of Pittsburgh neighborhoods, it is recommended that the survey data be shared with other community stakeholders and the PHMC to ensure its long-term preservation. An electronic database file (such as Microsoft Access) could be created with essential building attribute fields and photographs and should be saved on disk. A second file should be created in PDF format to ensure accessibility as computer programs and file compatibility change over time. Ideally, at least two

paper copies of the survey data should be made. One paper copy would be kept in the City of Pittsburgh Archives and the other would be curated at a local independent archive. Possible community partners for data sharing are the Pittsburgh History and Landmarks Foundation, the Pennsylvania Department of the Carnegie Library of Pittsburgh, the Archives of Industrial Society at the University of Pittsburgh, the Architectural Archives at Carnegie Mellon University, and the archives maintained by Preservation Pittsburgh.

- 3. Recommend the Architectural Inventory survey data, which has been incorporated into the City's GIS, be utilized while planning for the city, and when implementing aspects of the comprehensive plan.***
- 4. It is recommended that Pittsburgh Department of City Planning develop best practices to keep the database and GIS files relevant and useful in the long term and ensure its archival stability.***

It is also recommended that the Department of City Planning, through its Historic Review Commission, Historic Preservation Planner, and relevant Neighborhood Planner, pilot and develop a practice of sharing survey results with the survey community in a meeting. In areas which have not traditionally had a strong culture of preservation awareness or action, including the initial survey area, the purpose will be to start a conversation about historic preservation in the surveyed community. In areas with established historic districts, the conversation may continue at a higher level about expansion of current preservation activities. Meetings should include a variety of stakeholders, including local community groups, preservation organizations, and residents and property owners, as well as Historic Review Commission representative(s), city officials, and PHMC staff. Ideally, the survey area's City Council representative would host the meeting at a location within the survey area. A typical meeting agenda might be:

- Introductory presentation about the benefits historic preservation (for "new" communities) or the accomplishments of historic preservation to date (for "experienced" communities);
- Summary overview of historic preservation tools and practices (National Register, local designation, tax credits, etc.);
- Description of survey activity and presentation of results in that neighborhood or sector;
- Discussion of how City will use data and possibilities for how the community might use it;
- Question and answer.

- 5. Recommend the results of the Architectural Inventory and survey data be shared with subject neighborhoods at a neighborhood or district meeting.***

Intensive Level Survey Recommendations

All of the resources in Table 2, “Potential Individually Eligible Resources,” are recommended for further study or intensive-level survey. Based on appearance and available background information, these resources have the potential to be eligible for listing in the National Register of Historic Places.

- 6. Recommend resources identified in Table 2, “Potential Individually Eligible Resources” for Intensive-Level survey.***
- 7. Recommend resources identified in Table 2, “Potential Individually Eligible Resources,” with pre-existing Intensive-Level documentation, to be determined eligible for listing in the National Register of Historic Places.***

Many of the surveyed resources (in the table) may also contribute to a potential Troy Hill National Register historic district consisting of the hilltop portion of the neighborhood (Figures 3-5). The findings of this survey indicate that in Troy Hill, resources with potential significance and integrity are well-distributed throughout the neighborhood. For this reason, the identification of smaller districts within the neighborhood was not practical. We recommend that the Troy Hill flats be surveyed and evaluated along with the adjacent planning sectors to the west and south which include the contiguous East Allegheny and North Shore neighborhoods.

- 8. Recommend the Troy Hill flats be surveyed and evaluated with the adjacent planning sectors to the west (Sectors 3 and 16), which include similar riverfront areas.***

The one-story workers’ cottages found in Troy Hill and Spring Garden are seemingly unique to this area of the city and are recommended for further study as a group. At a minimum, their locations should be mapped and the most intact examples documented in detail while they are still extant.

- 9. Recommend Intensive-Level survey for one-story workers’ cottages in Troy Hill and Spring Garden.***

Methodology of the Project

Surveyed Properties

The project team identified several ways the methodology for this project should be changed for future Pittsburgh Architectural Inventory survey efforts. For example, one hurdle to a broad-scoped survey effort (including the remainder of Sector 1 and other Pittsburgh sectors) is that surveying *every* building on *every* street will take a considerable amount of time and effort. Within the confines of the current project, surveyors gathered data on 163 previously-surveyed resources and 1,243 newly surveyed resources (see Table 1 for estimates of survey completion; Table 5 for a list of newly surveyed resources).

Table 1: Survey Completion

| | This Survey | # Parcels Sector 1 | # Parcels City-wide | % Complete Sector 1 | % Complete City-wide |
|-------------------------|---------------|--------------------|---------------------|---------------------|----------------------|
| Not Previously Surveyed | 1,243 | 4,250 | 139,375 | 29.2% | 0.9% |
| Previously Surveyed | 110* | 110* | 13,385 | 100% | 0.8% |
| Total | 1,353* | 4,360 | 152,760 | 31.1% | 0.9% |

** Previously Surveyed resource numbers includes 53 previously surveyed resources in Sector 1 whose tax parcels have been abolished.*

Having spent approximately 128 hours in the field during this effort, at approximately 5.7 minutes per resource, a survey of the entire City would take one person approximately 13,123 hours, or 1,640 8-hour days, or 6.3 years to complete (assuming one surveyor and 40-hour work weeks). This process could be expedited if the PHMC “minimum record” attributes were only gathered for resources exhibiting potential for district or individual eligibility for listing in the National Register, and which retain a high level of integrity (individual resource) or medium level of integrity (in a potential historic district). Resources with low levels of integrity would be captured in the tablets with a photograph and an integrity rating.

Before the survey continues it will be important to define various terms used in the survey, for example, the word “vacant.” For this project, surveyors notated that parking lots, parks, gardens, and other *used* spaces (with no structures) were “sites,” but not necessarily “vacant.” This use of this term and others which could be subjective, such as the criteria for “High,” “Medium,” and “Low” integrity will need to be clearly established before the survey continues in order to ensure consistent results across time, neighborhoods, and surveyors. Survey team members also need to reach a common understanding at the outset as to which attribute fields need to be entered for which resources (e.g., do all fields need to be completed for a resource with low integrity?). We recommend development of a simple, brief Survey Handbook covering these issues; ideally this would be loaded onto the tablets used in the field for the reference of surveyors.

Another recommendation pertains to CRGIS records of previously surveyed properties. It took a considerable amount of time to identify and resurvey resources plotted in CRGIS. Though we had the State’s Access File and Shape Files for the resources, many of the points were plotted incorrectly, had no addresses, tax parcels or no names (among other missing information). The concept of resurveying these resources is good, but the overlap between the CRGIS files and the City’s Pittsburgh Historic Inventory files (from the Cultural Heritage Plan) is not accurate, and the effort required to locate the properties was considerable. If field-checking CRGIS points is a priority for future survey efforts, the pre-field identification and mapping of these resources can be expedited by the use of City Planning interns or collaboration with local preservation organization staff or volunteers. In order to maintain consistent survey data over time and ensure that assessments of National Register eligibility follow the National

Park Service's guidelines, it is recommended that survey staff meet the Secretary of the Interior's Standards for *Historian* or *Architectural Historian*.

10. Recommend only properties that exhibit potential for district or individual eligibility, and retain "high" (individual) or "medium" (district) level integrity be surveyed using PHMC's "minimum record" attributes (Appendix A); all others should be photographed and assigned an integrity rating in the field.

11. Recommend developing a Survey Handbook containing definitions of survey terms and guidelines for use of attribute fields prior to conducting additional survey work.

12. Recommend utilizing interns or collaboration with local preservation organization staff or volunteers for pre-field identification and mapping of CRGIS resources.

Tablets & Data Population

Overall, the tablets were a highly efficient tool for conducting the survey. However, some technical troubleshooting would improve further efforts.

Because the tablet data save in "real time" to City servers and are not stored locally on the tablets, it is impossible to complete survey work in areas that have no wireless coverage. Project historians experienced areas of no service along Spring Garden Avenue. Given the varied terrain of Pittsburgh, there will be numerous areas with inadequate wireless coverage in other neighborhoods. It is recommended that an "offline survey" method of saving survey data to the tablets be devised so that future surveyors can avoid the inefficient task of recording properties in areas without wireless coverage with paper forms and digital cameras and then later re-entering the data in the tablets for upload to City servers.

In future surveys, the battery life of tablet computers should be taken into account to ensure that it does not affect the efficiency of the survey effort. In this survey effort, the tablets utilized had a four-hour battery life and did not have removable batteries, so the project team utilized two tablets per surveyor each 8-hour day for maximum efficiency.

13. Recommend developing ways to record survey data using tablets in areas without wireless service.

14. Take into account the battery life of tablet computers in planning future surveys.

Appendix A: Attribute Fields – PHMC Minimum Survey Requirements

Attributes (parcel-by-parcel basis)

As per City of Pittsburgh: Checkboxes for the following categories:

- Potentially Eligible Individual
- Potentially Eligible District
- Vacant – Not Surveyed
- Post 1975 – Not Surveyed
- Integrity LOW – Not Surveyed
- Integrity MED – Surveyed
- Integrity HIGH - Surveyed

As per PHMC Minimum Record for CRGIS:

- Historic Name, or blank if there is none
- Resource Type (NR category)
 - Building
 - Site
 - Object
 - Structure
 - District
- Tax Parcel (if there is no address) (automatically populated)
- USGS Quad, UTM Zone, and or Lat/Long.
- Address (automatically populated)
- Municipality (automatically populated)
- County (automatically populated)
- Owner (public, private, or mixed)
 - Public
 - Private
 - Mixed
- Number of resources
- Style (as per “how to complete PHRS survey form”)
 - Colonial
 - Georgian
 - French Colonial
 - Spanish Colonial
 - Dutch Colonial
 - Postmedieval

- English
 - Early Republican
 - Federal
 - Early Classical
 - Republican
 - Mid-19TH Century
 - Greek revival
 - Gothic Revival
 - Italian Villa
 - Exotic Revival
 - Late Victorian
 - Gothic
 - Italianate
 - Second Empire
 - Stick/Eastlake
 - Queen Anne
 - Shingle Style
 - Romanesque
 - Renaissance
 - Octagon Mode
 - Late 19TH & 20TH Century Revivals
 - Colonial Revival
 - Classical Revival
 - Tudor Revival
 - Late Gothic Revival
 - Mission/Spanish
 - Beaux Arts
 - Italian Renaissance
 - French Renaissance
 - Late 19TH & Early 20TH Century American Movements
 - Prairie School
 - Commercial Style
 - Chicago
 - Skyscraper
 - Bungalow/Craftsman
 - Modern Movement
 - Moderne
 - International Style
 - Art Deco
 - Other
 - No Style
 - Mixed
- Year Built 1 (circa dates okay) (may be available through the County Assessment data, though possibly not accurate)
 - Year Built 2 (Additions/alterations)

- Exterior Materials (as per “how to complete PHRS survey form”) (need multiple choice – at least three)
 - Adobe
 - Aluminum
 - Asbestos
 - Asphalt
 - Brick
 - Bronze
 - Cast Iron
 - Ceramic tile
 - Cloth/Canvas
 - Concrete
 - Copper
 - Earth
 - Fiber glass
 - Glass
 - Granite
 - Iron
 - Lead
 - Limestone
 - Log
 - Marble
 - Metal, unspecified
 - Nickel
 - Other
 - Plastic
 - Plywood/particle board
 - Rubber
 - Sandstone/Brownstone
 - Shake
 - Shingle
 - Slate
 - Steel
 - Stone, unspecified
 - Stucco
 - Synthetics
 - Terra cotta
 - Tin
 - Vinyl
 - Weatherboard
 - Wood
 - Wrought iron
- Date of Survey Form (date of data collection)
- Images/jpgs
- Site Plan
- Historic Function/Sub-Function/Particular Use
 - Domestic
 - Single dwelling

- Multiple dwelling
- Secondary structure
- Hotel
- Institutional housing
- Camp
- Village site (Archaeology)
- Commerce/Trade
 - Business
 - Professional
 - Organizational
 - Financial organization
 - Specialty store
 - Department store
 - Restaurant
 - Warehouse
 - Trade (Archaeology)
- Social
 - Meeting hall
 - Club house
 - Civic
- Government
 - Capitol
 - City hall
 - Correctional facility
 - Fire station
 - Governmental office
 - Diplomatic building
 - Custom house
 - Post office
 - Public works
 - Courthouse
- Education
 - School
 - College
 - Library
 - Research facility
 - Education-related housing
- Religion
 - Religious structure
 - Ceremonial site
 - Church school
 - Church-related residence
- Funerary
 - Cemetery
 - Graves/burials
 - Mortuary

- Recreation/Culture
 - Theater
 - Auditorium
 - Museum
 - Music facility
 - Sports facility
 - Outdoor recreation
 - Fair
 - Monument/marker
 - Work of art
- Agriculture/Subsistence
 - Processing
 - Storage
 - Agricultural field
 - Animal facility
 - Fishing facility or site
 - Agricultural outbuilding
 - Horticultural facility
 - Irrigation facility
- Industry/Processing/Extraction
 - Manufacturing facility
 - Extractive facility
 - Waterworks
 - Energy facility
 - Communications facility
 - Processing site (Archaeology)
- Health Care
 - Hospital
 - Clinic
 - Sanitarium
 - Medical business/office
 - Resort
- Defense
 - Arms storage
 - Fortification
 - Military facility
 - Battle site
 - Coast Guard facility
 - Naval facility
 - Air facility
